SUMMARY

- Accomplished SQL Developer with 5+ years of experience in designing, developing, and optimizing SQL-based solutions, specializing in database administration, ETL processes, and business intelligence reporting. Proven ability to improve data processing efficiency by 30% through advanced indexing, query optimization techniques, and performance tuning, ensuring seamless data flow and real-time analytics for enterprise applications.
- Developed and automated 50+ SSIS ETL pipelines, reducing data ingestion time by 40%, enhancing data accuracy, and integrating structured and unstructured data sources (Oracle, Excel, CSV, XML).
- Optimized OLTP/OLAP database performance, reducing query execution time by 60%, leveraging indexing, partitioning, and stored procedure tuning.
- Designed 20+ interactive dashboards and reports using Power BI and SSRS, providing real-time business insights and reducing manual reporting efforts by 50%.
- Spearheaded a database migration to Azure, reducing infrastructure costs by 25%, improving scalability, and ensuring high availability with cloud-based storage solutions.
- Created 30+ multidimensional and tabular models using SSAS, implementing MDX and DAX queries to enhance data analytics and reporting capabilities.
- Improved ETL processing time by 35% using optimized SSIS workflows and data transformations, ensuring seamless data movement across enterprise systems.
- Led database security initiatives, implementing access controls, encryption, and backup strategies, reducing data breaches by 80% and ensuring compliance with security best practices.
- Reduced report generation time by 45% through SQL Server Reporting Services (SSRS) optimizations, improving data visualization and analytics across departments.
- Successfully implemented database indexing strategies that increased system performance by 50%, enhancing query response times for critical business applications.
- Integrated 10+ data sources into a centralized data warehouse, enabling efficient data retrieval and enhancing cross-functional reporting capabilities.
- Automated database monitoring and maintenance tasks using PowerShell and T-SQL scripts, decreasing manual intervention by 70% and ensuring system reliability.
- Collaborated with cross-functional teams in Agile environments to deliver database solutions that improved business decision-making speed by 35%.
- Developed and maintained DevOps database CI/CD pipelines using Git and automated deployment strategies, reducing deployment time by 40%.
- Recognized for strong analytical skills, problem-solving abilities, and the ability to optimize large-scale databases, ensuring 99.9% uptime for mission-critical applications.

SKILLS

Scripting Languages	Python, SQL, Bash, PowerShell, Java
Databases	SQL, MySQL, SAP HANA, Amazon RDS, AWS DynamoDB, MongoDB, Oracle, DB2, MS SQL Server 2016, 2014, 2012, 2008, MS Access
AWS Services	S3, RDS, Redshift, Glue, Lambda, EMR, Kinesis, EC2, DynamoDB, CloudFormation, IAM
Visualization Tools	Tableau, Power BI, Looker, Microsoft Excel, SQL Server Management Studio, MSBI Stack (SSIS, SSRS, SSAS)
ETL Tools	Alteryx, Apache NiFi, Apache Airflow, AWS Glue, Azure Data Factory (ADF), Apache Spark, Talend, SSRS, DTS
Packages	Pandas, NumPy, Matplotlib
AI/ML Tools	Azure ML Studio, TensorFlow, PyTorch, Keras
GenAI	OpenAI API, ChatGPT, Hugging Face Transformers
Big Data	Apache Hadoop, Apache Kafka, Apache Flink
Cloud Ecosystem & DevOps	AWS, Azure, GCP, Docker Containers, Kubernetes, Amazon EKS, CI/CD Pipeline, GitLab
Data Warehousing	Amazon Redshift, Google BigQuery, Snowflake
Version Control	Git, Git Hub, Git Lab
Monitoring & Logging	CloudWatch, Datadog, ELK Stack, Prometheus, Grafana
Other	SDLC, Agile Methodologies, Data Cleaning, Automation, Problem Solving, Critical Thinking, Root Cause Analysis, A/B Testing

PROFESSIONAL EXPERIENCE

AVER - Washington, DC

March 2024 – Present

Power BI/SSIS/SSRS Developer

- Developed and optimized 15+ Power BI dashboards with DAX measures, calculated columns, and advanced visualizations, enhancing business intelligence insights for 200+ users.
- Designed and implemented ETL processes using SSIS to extract, transform, and load data from 10+ disparate sources, ensuring 99.9% data accuracy and integrity.
- Automated report generation by scheduling 30+ SSIS packages and SQL Agent jobs, reducing manual intervention by 40% and improving operational efficiency.
- Created interactive SSRS reports, including 50+ paginated, drill-through, drill-down, sub-reports, and matrix reports, supporting C-level executive decision-making.
- Built and maintained OLAP cubes and tabular models in SSAS, leveraging MDX queries for multi-dimensional data analysis, improving query performance by 35%.
- Developed complex SQL queries, stored procedures, and views to streamline data extraction, enhancing reporting accuracy by 20%.
- Integrated Power BI with Azure Synapse Analytics, SQL Server, and cloud-based sources, enabling real-time data analytics with a 30% improvement in data refresh rates.
- Implemented row-level security (RLS) in Power BI, ensuring controlled access for 500+ users across multiple business units, meeting compliance standards.
- Configured Power Query and Power Pivot for advanced data modeling and transformation, reducing data preparation time by 50%.
- Created reusable SSIS components for data validation, error handling, and logging, reducing ETL failures by 25% and improving troubleshooting efficiency.
- Designed and deployed Power BI Dataflows to automate data ingestion and transformation, reducing manual effort by 60% for self-service analytics.
- Optimized database performance by indexing, partitioning, and tuning queries, reducing report load times by 40% and improving scalability.
- Implemented data governance best practices, including data lineage tracking and metadata management, ensuring 100% compliance with GDPR and HIPAA.
- Collaborated with cross-functional teams, including data engineers, business analysts, and stakeholders, to translate business requirements into scalable BI solutions, accelerating project delivery by 20%.

TALENT GROUPS - Houston, TX

Dec 2023 – April 2024

SQL/ETL Developer

- Designed and developed 20+ ETL pipelines using SSIS to extract, transform, and load data from multiple sources, ensuring seamless integration into target databases with 99.9% data accuracy.
- Automated SSIS deployments using configuration files and parameterized packages, reducing deployment time by 50% and ensuring a smooth transition from development to production.
- Optimized SSIS package performance by implementing indexing, parallel processing, and data partitioning techniques, improving overall data processing speed by 35%.
- Utilized SSIS transformations such as Conditional Split, Derived Columns, and Data Validation to enhance data quality, reducing data discrepancies by 30% before ingestion into SQL Server.
- Designed and maintained 30+ SSRS reports, including paginated, drill-through, and ad-hoc reports, improving real-time business intelligence insights for 100+ stakeholders.
- Migrated 1TB+ of legacy data from various sources into modern SQL Server environments, reducing redundancy and improving accessibility by 40%.
- Created and fine-tuned complex SQL queries, stored procedures, and views, improving query execution speed by 25% to support data warehousing and analytics.
- Developed user-defined hierarchies in SQL Server Analysis Services (SSAS), improving multi-dimensional data analysis and reporting accuracy by 20%.
- Implemented data validation frameworks using T-SQL and Python, ensuring 100% accuracy and consistency of migrated and transformed data.
- Integrated SSIS with cloud storage solutions such as Azure Blob Storage, improving data processing scalability and reducing on-prem storage costs by 25%.
- Configured database monitoring and alerting systems using SQL Profiler and Performance Monitor, proactively identifying and resolving 95% of performance issues before they impacted users.

- Architected and deployed data analytics solutions using Azure SQL Database and AWS Redshift, enabling scalable data storage and real-time analytics across multiple sources.
- Designed and maintained ETL pipelines leveraging Informatica PowerCenter, NiFi, Talend, and Apache Spark, automating data extraction, transformation, and loading into cloud data warehouses.
- Developed Power BI dashboards and reports, integrating advanced DAX calculations, Power Pivot, Power View, and Power Map for interactive data visualization and business intelligence.
- Engineered Azure Data Factory (ADF) pipelines for automated data ingestion, transformation, and storage in Azure SQL Database, improving data processing efficiency.
- Integrated SSIS, DataStage, and Azure Synapse Analytics to streamline data movement and enhance reporting capabilities across hybrid cloud environments.
- Built BigQuery, Redshift, and Snowflake-based data solutions, optimizing SQL queries and data partitioning strategies to improve performance and reduce latency.
- Configured Universal Automation Center (UAC) to schedule and automate ETL jobs, ensuring continuous and efficient data processing.
- Developed and tuned complex SQL queries, stored procedures, and triggers across SQL Server, Oracle, and Teradata, enhancing query performance for data-driven applications.
- Migrated legacy SQL Server databases to Azure SQL Database, leveraging BACPAC and Data Migration Assistant (DMA) for seamless cloud transitions.
- Built REST API integrations with Flask, JavaScript, and JSON, enabling seamless communication between ETL processes and external applications.
- Leveraged Databricks and Hadoop ecosystems (HDFS, Hive) for big data processing and advanced analytics, improving data accessibility and reporting efficiency.
- Developed SQL-based validation frameworks using Python (Pandas, NumPy) to ensure data integrity across cloud and on-prem environments.
- Automated report generation and data exports in SSRS, Power BI, and Report Builder, delivering real-time insights for business stakeholders.
- Collaborated with DevOps and Cloud teams to optimize data pipelines using Docker, Kubernetes, and Terraform, ensuring efficient deployment and scalability across cloud platforms.

- Designed and optimized ETL pipelines using SQL Server Integration Services (SSIS) to automate data extraction, transformation, and loading (ETL) from diverse sources such as Excel, CSV, and legacy databases.
- Developed and maintained complex SQL scripts and stored procedures to transform and cleanse large datasets, ensuring data accuracy and integrity in a high-volume transactional environment.
- Deployed and scheduled SSIS packages to automate data movement across FTP servers and cloud platforms, improving operational efficiency and reducing manual interventions.
- Created Power BI dashboards and SSRS reports with advanced DAX calculations, drill-through capabilities, and data visualizations, enhancing business intelligence and decision-making.
- Integrated and optimized SQL Server Reporting Services (SSRS) to generate scheduled and on-demand reports, delivering insights to business stakeholders through automated email distribution.
- Leveraged SSIS transformations such as Conditional Split, Derived Columns, and Data Cleansing to streamline data staging and improve ETL performance.
- Designed and implemented dimensional data models and star schemas, optimizing OLAP queries and enabling efficient data aggregation for enterprise reporting.
- Developed, deployed, and maintained database objects, including tables, indexes, views, and triggers, ensuring optimal database performance and maintainability.
- Orchestrated ETL workflows with SQL Server Agent, ensuring seamless data synchronization between transactional and analytical databases.
- Conducted UAT (User Acceptance Testing) for ETL processes and reports, validating data accuracy and ensuring compliance with business requirements.
- Implemented data security measures such as encryption and data masking to comply with HIPAA and GDPR regulations, protecting sensitive customer data.
- Automated SQL-based data validation frameworks using Python and PowerShell, reducing manual data reconciliation efforts and ensuring consistency across enterprise systems.

EDUCATION

Bachelor in Computer Science

Jan 2015 - Sep 2018

Haramaya University, Oromia, Ethiopia
