

Felix Daniel Izarra

Senior Mobile Engineer

Mobile Full Stack | Flutter | Swift | Firebase & XR

felix@izrr.dev (312) 477 1983 Seattle,WA (Open To Relocate) [LinkedIn](#)

PROFESSIONAL SUMMARY

Dedicated software engineer specializing in Flutter and cross-platform mobile development, with strong expertise in building performant, scalable apps backed by modern cloud backends (Supabase, Firebase). I combine clean architecture, UI/UX craftsmanship, and a keen eye for design to deliver polished end-to-end products. With 8+ years of experience across mobile and Unity3D, I excel at prototyping quickly, iterating on user-centric features, and bringing creative concepts to life in fast-paced environments.

SKILLS

- Bilingual (Fluent in English and Spanish)
- Full Stack Mobile App Development, Architecture and Publishing: Native iOS and Android Apps, Flutter and Dart, C#, Swift, Cross Development Frameworks. Google Console & App Store Connect best practices for ASO.
- Unity 3D, Virtual Reality, Augmented Reality, ISDK, Hand Tracking, Computer Vision and Eye Tracking, Oculus Quest Development & Mobile Game Development and Publishing.
- Firebase, Firestore Database, Firebase Auth, Analytics, Reports, Messaging and Cloud Functions with NodeJS, Supabase and Supabase Edge Functions.
- Atlassian Jira, git, Trello, Slack, SCRUM Principles and values and team management.
- Sketch, Figma, Zeplin, Photoshop.

WORK EXPERIENCE

- **Senior Mobile Full Stack (Flutter/Firebase/Supabase) Engineer** at BoldHue (April 2024 - Current). USA, Remote.

BoldHue is a startup that brings custom make up from a physical wand scanning the skin of the user and then prints the specific pigment with the correct match for the consumer. Here, I had the opportunity to lead the whole end to end development of the mobile app from concept to distribution in **iOS and Android with Flutter** including UX. **I had to develop the backend using Firebase and then we migrated to Supabase** and finally, I had a lot of work to do with BLE characteristics to access the device features back and forth.

- **Software Engineer (VR/AR/Mobile) L5** at Meta Reality Labs (May 2022 - May 2024). Seattle, WA.

At Meta, I worked in the **applied research part of Reality Labs**, constantly creating new concepts and interfaces to solve the AR interaction

problem. I help Meta to keep pioneering in new technologies and interfaces in the AR/VR realm through **user research, prototyping new experiences** and leveraging important low level components like ML models that were created in the company to create **high level experiences** and value for the users. Most of my work here was made in **C#, Python, Unity3D, Swift and Figma for Oculus Devices, Mobile Apps and Microsoft HoloLens**.

In this position, my work revolved around brainstorming sessions with creatives, designers and stakeholders to conceptualize ideas with high risk/high reward and then implementing MVPs to test with our user and gather insights.

- **Flutter/Mobile Full Stack Lead Developer at Martial Profile. (July 2023 - Currently).**

Martial Profile is a mobile app for helping martial artists to track their training, keep them motivated and get insights about their data. I conceptualized, designed and developed the web front end, mobile (iOS & Android using Flutter and Dart) and backend (Firebase, NodeJS).

In this project I've taken the end-to-end responsibility to take the technology of the company from the research and concept to design, development, publishing and ASO. This project is currently available for free on the App Store and Play Store and includes push notifications, subscriptions, social features and tracking of the training.

- **Software Engineer (Mobile/AR/VR) L4 at BOSE Corporation (December 2018 - March 2022). Framingham, MA**

For this role, at the concept development and research wing of the consumer electronics part of the company, I've been able to technically **lead and prototype projects** from the brainstorm through the different cycles of development all the way to internal beta, external beta, and production in order to add value to our products.

I've been the technical lead on the Bose SW beta program, building the capability to rapidly deploy and test new experiences at scale, as well as managing the first set of features to inform future product launches.

From my work here **2 patents** were granted so far and one is pending. Specifically, I had to use for my projects mostly: Swift, Obj-C, Cocoapods, Git, REST, Firebase, TestFlight, AudioKit, Sketch, Figma, Zeplin, Unity3D, Oculus, Photon VoIP, BoseAR, Vuforia, Trello, and proprietary libraries at Bose that I've helped to build.

- **Unity & Mobile Developer and Team Leader at Virtual Castle (2015 - 2018)**

I've been working at this tech startup to handle third-party/outsourced programming projects to clients around the world (Asia, Europe, North and South America, and Oceania), covering, **mobile applications, web development, game development, augmented reality & virtual reality** in Venezuela with a team of 10 workers including artists and developers. This job has been a very important thing to me in my life, I've learned about passion, responsibility, communication with clients, customer support, administration, human resources & headhunting, also, more programming tools. This was a startup. (<http://www.TheVirtualCastle.com>).

Some of the projects I've completed in here are:

- <http://futurity.com.br> Is an augmented reality browser app made in Unity for Android and iOS, I had to learn a lot of stuff about working with **XCode** and all the iOS publishing for the apps in here.
- TTCarnival by TIG (<https://www.youtube.com/watch?v=HCxtMpAp078>) **Augmented reality app** for a customer in China for enhancing a surprise birthday box.
- Advergame for **Coca Cola** at summer festival (<https://www.facebook.com/virtualcastledev/videos/1250053928420841/>) **Windows Game** for the event of Coca Cola in Paraguay using a wireless mouse and playing flip the bottle.

- **Tech Consultant / Project Manager at BIM FREE (August 2017 - August 2018) - Miami, FL**

All the consultation and project management for CMS was built from scratch in order to deliver a service for content creation for online professors who work on BIM. I worked here as a tech provider and also **Product Owner**, taking care of converting all the customer needs to an easy-to-use SAAS.

- **Outsource Tech Consultant & Developer at Baibuk (September 2016 - February 2018) - Miami, FL**

Baibuk is an Augmented Reality company based in Florida that I've been working with, we are always working for big brands like Nike, Disney, Barcelona FC... for making **Augmented Reality experiences** for their products on **iOS and Android** mobile systems using **Unity3D**. (<http://www.baibuk.com/>).

- **Product Owner and Developer at Social-Experience LLC (September 2017 - 2019) - Chicago, IL**

I've been working as the product owner and gameplay developer (even taking the role of Scrum Master) for a **Unity3D** app startup at the first round of funding. Managing a team of 7 developers (3D artists included). It's a social network/game software not released yet.

- **Developer at Watto Studio LLC (2013-2015) - Los Angeles, California, USA & Caracas, Venezuela**

Worked for a tech company based in **Los Angeles & Caracas** has team leader of development working with **C#** programming language and the **Unity Game Engine** to make **mobile apps**. At this job I developed skills in programming, leadership, communication, delegating tasks, and working with tight deadlines. (<http://www.wattobiz.com/>).

- **Organizer at Caracas Game Jam 2016** - Venezuelan location of Global Game Jam / **Hackathons**

For this year I was selected for the organization of the global game jam to organize the Venezuela edition for the year 2016. I've been participating since 2012 as a developer so, it was an honor for me to help in the main game developers event in January 2016. (<http://www.caracasgamejam.com>).

I have also been a participant since 2012 in this hackathon, for me, is the best way to connect with people in my area that we share interests.

OTHERS

- Patents can be found at <https://patents.justia.com/inventor/felix-izarra>

- Published my game Wild Squad: Animal Adventure on the App Store and Play Store. 2020

For this personal project, I was the main developer and product owner. I also had to look and invest in developers, translators, and artists to help make it happen.

- Winner of "Best Usage of Unity3D Game Engine" Prize at NBCUniversal Hackathon Miami 2018.
Sponsored by Unity3d.

I made an AR app with a cloud solution for scanning TV Shows and being able to comment on them (with a Ruby on Rails backend), also having different types of interactions (AR video, for example). Link to the video submission for the event:
<https://www.youtube.com/watch?v=7VEUty0AHqk>

- **Hackathon and Game Jams enthusiast**

I've been participating in Global Game Jam since 2012 and some other hackathons in different countries, starting with algorithm problem-solving ones but now I prefer only the ones about making small prototypes for different industries.

EDUCATION

Central University of Venezuela – Computer Science (2010 - 2016)
