WORK EXPERIENCE

Salesforce

Senior Software Engineer

04/2017 - 09/2025

- Architected a **distributed, event-driven** payment processing system for **Commerce Cloud** using **Apache Kafka**, handling \$5M+ daily transactions with 99.99% uptime and minimizing revenue loss due to downtime.
- Developed an order management system for Commerce Cloud with **Golang** and **React**, contributing to \$2.8M in incremental quarterly revenue through enhanced product discovery and checkout.
- Implemented idempotent **REST APIs** with **Golang**, preventing duplicate orders during retries and cutting payment processing failures by 18%.
- Integrated the order management system with **Salesforce Customer 360**, unifying purchase history and customer data to enable personalized upselling campaigns that increased average order value by 12%.
- Built dynamic and responsive admin dashboard with **JavaScript** and **React**, streamlining bulk data entry tasks and saving the support team 20% in manual processing time.
- Developed a shipping cost calculator with **Python/FastAPI/NumPy** that automatically picks the cheapest shipping option, saving the company \$15,000 per month.
- Added **AI-powered** product recommendations that personalized the shopping experience and increased average order value by 12%.
- Collaborated with product managers and stakeholders, translating business needs into technical specs that cut development rework by 20%.
- **Mentored** 2 junior engineers through code reviews and debugging sessions, accelerating their task completion by 40% within 3 months.
- Designed **cloud infrastructure** on **AWS** with **Terraform** to enable zero-downtime deployments and high availability.
- Set up automated **CI/CD pipelines** with **Jenkins**, containerized applications using **Docker**, and orchestrated deployments on **Kubernetes** for improved efficiency and scalability.
- Redesigned **Agile** sprint planning workflow by introducing story point poker sessions, boosting estimation accuracy by 25% and sprint completion rates.

Alector

Software Engineer

06/2014 - 03/2017

- Developed patient portals with **HIPAA**-compliant authentication, enabling 2M+ users to securely access lab results and prescription history.
- Built a set of reusable **React** components for common features, allowing our team to ship new patient-facing features faster by eliminating redundant code.
- Implemented a secure, multi-layered **Node.js** backend with fine-grained middleware for rate limiting, input validation, and dynamic content negotiation, safeguarding sensitive health data.
- Partnered with clinical teams to translate complex healthcare regulations into patient-friendly **React** components.
- Worked in a **fast-paced startup** environment, contributing to the successful release of shippable products every week through **agile** sprint cycles.

SKILLS

- **Programming Languages:** Golang, JavaScript, TypeScript, Python
- **Frameworks & Libraries:** Gin, Echo, React, Next.js, FastAPI
- **Databases:** MySQL, PostgreSQL, MongoDB, Redis
- **AI:** Langchain, RAG, Large Language Models, Transformers, Prompt Engineering
- **Cloud & DevOps:** AWS, Azure, Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, CloudFormation, Prometheus
- **Others:** REST APIs, GraphQL, gRPC, WebSockets, Microservices, Event-Driven Architecture, Agile & Scrum, Kafka, API Design

EDUCATION

University of Central Arkansas

08/2010 - 05/2014

Bachelor of Science in Computer Science
