CERTIFICATIONS

- Microsoft Azure Developer Associate: Microsoft ([Certificate](#))
- The Oracle Certified Professional: Java SE 17 Developer ([Certificate](#))
- The Oracle Certified Professional: Java SE 11 Developer ([Certificate](#))
- AWS Certified Developer Associate: AWS ([Certificate](#))
- Certified Data Scientist: Up Grad Education ([Certificate](#))
- Certified Cyber Security : University of Alabama at Birmingham

SUMMARY

As a Software Engineer I had experience in designing, developing, and testing web and enterprise applications using Java/J2EE technologies. Skilled in building RESTful APIs with Spring MVC, Spring Boot, Hibernate, and JPA, with strong expertise in backend development. I am proficient in database management using Oracle, SQL Server, DB2, and NoSQL databases like MongoDB and Apache Cassandra. Adept at delivering robust and scalable solutions throughout the SDLC, with a solid foundation in object-oriented programming and software design principles & patterns.

SKILLS

Programming Languages:	Java, SQL, Python, C++.
Frameworks & Libraries:	Spring Boot, Hibernate JPA, Node.js, React, Angular, JUnit, TestNG
Testing Tools:	Selenium, JUnit, Mockito, SoapUI
Cloud Platforms:	AWS, Microsoft Azure, GCP.
Build & CI/CD Tools:	Jenkins, Maven, Gradle, Docker
Databases:	PostgreSQL, Oracle DB, MongoDB, MySQL
Tools:	Git, Figma, GitHub, Bitbucket, Splunk.

WORK EXPERIENCE

Software Engineer | Cigna Healthcare | USA

May 2024 – Present

- Spearheaded the design and development of an optimized website, facilitating progress tracking towards becoming bar raisers. Implemented micro frontend architecture to elevate user experience.
- Configured applications using Spring Boot and Java 17, integrating Spring Security for REST APIs to ensure secure authentication and authorization, safeguarding sensitive data.
- Implemented Object-Relational Mapping (ORM) using Hibernate (JPA) to establish a mapping between object-oriented domain models and relational databases like MySQL and MongoDB.
- Implemented Graph QL to optimize API performance and integrated Elasticsearch, Apache Kafka, and Kibana for comprehensive logging and analysis.
- Developed multiple web pages using HTML, CSS, Angular, and JavaScript to implement client-side validation. Created web interfaces and customer interaction leveraging React.js and Redux for the front-end, along with TypeScript.
- Designed and developed scalable backend services using Node.js with Express.js, ensuring high performance and efficient API handling.
- Prioritized performance and scalability enhancements by leveraging AWS services, including Lambda, ECS, DynamoDB, AppSync, and S3 Buckets.
- Conducted comprehensive functional validations for 50+ APIs using Postman, ensuring their reliability. Automated tests using JUnit and Mockito, achieving a 90% improvement in bug detection, leading to more robust and stable software.

Software Developer | Accenture | Hyderabad, India

July 2020 – Feb 2023

- Developed 50+ RESTful Web Services using Java, Spring Boot, and Node.js, facilitating secure data exchange between pharmaceutical research applications and improving clinical trial management efficiency by 40% through SOA architecture.
- Designed 20+ interactive web interfaces for clinical trial monitoring portals using HTML, CSS, jQuery, JavaScript, and React.js, enhancing data visualization for 200+ researchers and regulators.
- Built and deployed cloud-based applications on Microsoft Azure, optimizing drug research data processing and ensuring 100% compliance with FDA and HIPAA regulations.
- Enhanced UI/UX components using CSS, HTML, and jQuery, reducing user interaction time by 30% and improving pharmaceutical data tracking efficiency.
- Managed version control for 500+ code commits using Bitbucket and tracked 100+ regulatory compliance tasks with JIRA, ensuring on-time delivery of pharmaceutical software solutions.

Java Developer Associate | *Glintsoft Infotech* | *Bangalore, India*

Jan 2020 – Jul 2021

- Designed and implemented backend architecture integrating Spring MVC and Hibernate (JPA) for MySQL and Oracle DB, optimizing financial transaction processing and reducing query response time by 40% for banking APIs and SOAP-based services.
- Developed interactive banking dashboards and customer portals using HTML5, CSS3, jQuery, Bootstrap JS, and React.js, enhancing user experience for online banking services such as account management and loan applications.
- Configured Jenkins CI/CD pipelines for automating deployment of banking applications, reducing project delivery time by 25% and ensuring seamless integration of financial services.
- Implemented error tracking and log analysis using Splunk, creating real-time dashboards and alerts to monitor banking transactions, fraud detection, and system performance.
- Deployed secure banking applications on AWS EC2 instances, configuring Linux-based environments with Java, and Tomcat, ensuring high availability for banking services.
- Gained hands-on experience with AWS Kinesis to design and implement real-time transaction processing solutions, enabling faster fraud detection and compliance monitoring.
- Implemented Factory and Singleton design patterns to develop modular and reusable banking services, improving code maintainability and reducing redundancy in transaction processing systems.
- Utilized the Observer pattern to design event-driven notifications for real-time banking alerts, ensuring instant updates on transactions, fraud detection, and account activities for enhanced customer security.

PROJECTS

Real-Time To-Do Application

- Implemented secure authentication using Java with Google OAuth2 and Firebase, reducing average login time by 30% and increasing sign-up rates by 20%.
- Developed a task management feature with Java and Spring Boot, achieving an average task creation time of under 5 seconds and boosting task completion rates by 25%.
- Built an event scheduling feature with Java and Hibernate, reducing missed deadlines by 25% and improving task completion rates by 30%.
- Designed a performance analytics engine using Java and Apache Kafka, boosting productivity by 10% and reducing time spent on low-priority tasks by 20%.

Adventure Sports Booking and Management Web Application

- Developed a scalable adventure sports booking and management web application featuring booking, user authentication, gallery, query management, careers, and admin panel functionalities.
- Utilized Java with Spring Boot for backend development and HTML, CSS, and JavaScript for a responsive and interactive front-end.
- Implemented MySQL for efficient data management, ensuring seamless user interactions and operational efficiency.

EDUCATION

The University of Alabama at Birmingham (UAB) | Birmingham, Alabama, USA

CGPA 4.0/4.0

Master of Science in Computer Science*Course Curriculum: Data Structures, Design and Analysis of Algorithms, Advanced Web Applications & Technologies, System Programming, Database Systems, Machine Learning, Computer Networks, Cloud Computing.***Lovely Professional University** | Punjab, India

CGPA 7.8/10

Bachelor of Technology in Electronics and Communication Engineering
