PROFESSIONAL SUMMARY

- Over 7+ years in IT Profession with proven experience in **Design, Development, Integration of DevOps tools, Cloud Automation and Migration** with a major focus in the areas of **AWS, AZURE, OpenStack, CI/CD Pipeline**, and an **Amazon certified Solutions Architect**, also **HashiCorp Certified: Terraform Associate**.
- Proficiently experienced with Amazon AWS Cloud Administration which includes services like: **EC2, S3, EBS, VPC, ELB, AMI, SNS, RDS, Redshift, IAM, Route 53, Auto scaling, CloudFront, Cloud Watch, Cloud Trail, Cloud Formation, NACL, Security Groups**. Manage containers using **Amazon EC2, ECR, EKS, EMR, ATHENA, Kinesis, Glue, QuickSight** and **Fargate**. Worked on **AWS DevOps** tools like **AWS Code-Pipeline** to build a continuous integration or continuous delivery (CI/CD) workflow using **AWS Code-Build, AWS Code-Deploy**, and worked with many other AWS tools to Build and deploy a microservices architecture using **ECS** or **AWS Lambda**.
- Hands-on expertise with **AWS Databases** such as **RDS(Aurora), Redshift, DynamoDB** and **Elasticache (Memcached & Redis)**. Extensively worked with AWS Services, **Big Data, SPARK**.
- Expertise with security identity tools like **IAM, Certificate manager, Key Management Systems (KMS)**, creating **Security groups, AWS shield** for **DDoS protection**.
- Experienced in both **Terraform** and **CloudFormation** to automate AWS environment creation along with the ability to deploy on AWS, using build scripts (**AWS CLI**) and automate solutions using **Shell** and **Python**.
- Defined several **Terraform** modules for building, changing, and versioning of Infrastructure and wrote templates for **AWS Infrastructure** as a code using **Terraform** to build staging and production environments.
- Experience with structuring, arranging and sending arrangements on Microsoft Azure utilizing **ARM Templates, AZURE PowerShell Module** and, **Azure CLI** concentrating on high-accessibility and auto-scaling. Extensive experience in **Azure Logic apps, Service Bus, DocumentDB** and **SQL Database**.
- Experience in various **Azure Services** like **Compute (Web Roles, Worker Roles), Caching, SQL Azure, NoSQL, Storage and Network Services, Azure Active Directory, Internet of Things (IoT), Azure Monitoring, API Management, Scheduling, Autoscaling, Web Apps, Logic Apps, Azure Identity & Access Management, Data Factory, PowerShell Automation** and other **Azure Services**.
- In-Depth understanding of **Spark** Architecture including **Spark Core, Spark SQL, Data Frames, Spark Streaming** with **PySpark** and **PANDA** library.
- Experience with **Pivotal Cloud Foundry, OpenShift, Kubernetes** architecture and design, troubleshooting issues with platform components (PCF), and developing global or multi-regional deployment models and patterns for large-scale developments and deployments on **Cloud Foundry, OpenShift** and **Kubernetes**.
- Expertise in App Containerization technology **Docker**, creating **Docker images, Containers, Docker Registry** to store images, cloud-based registry **Docker Hub, Docker Swarm, Rancher** to manage containers.
- Experience in developing APIs using **Kubernetes** to manage and specify the copies of the containers to run the actual servers in the cloud environment. Scheduled, deployed and managed container replicas onto a node cluster using **Kubernetes**. Experience in managed **kubernetes** services such as **Google kubernetes engine (GKE), Azure kubernetes (AKS)** and **AWS Elastic container service**.
- Experience in defect management systems **Remedy, OTRS, JIRA, Service now, Rally** and Knowledge on testing frameworks **JUnit, Selenium**, big data components **kafka, Hadoop, Spark**, and **Confluence** for Documentation. • Good at scripting languages like **Python, Ruby, Perl, Bash** and configuration management tools like **Chef, Puppet, Ansible** and **CF Engine**.
- Experience in working on version control systems like **Subversion (SVN)** and **GIT**, **clear case, Stash** used Source code management client tools like **Visual SVN, Tortoise SVN, Stash, Source Tree, GIT Bash, GitHub, GIT GUI, Gerrit** for code review and other command line applications.

- Proficient in building deployable Artifacts (War, Jar, Ear, Zip, Tar) from source code and maintained by using **Maven (Pom.xml)**, **Ant (Build.xml)** and **Gradle (Build.gradle)**. And worked with Groovy Scripts to Automate Configuration in **Jenkins**.
- Used **Jenkins** as **CI/CD** to deploy to **AWS** and also extensively worked on other tools like **Bamboo**, **Hudson**, and **Cruise Control** for continuous integration and for all end to end automation functions with all build and deployments.
- Strong Experience on **Ansible Playbooks**, **Inventory files**, **Vault feature** to configure the servers, deploy software, encryption of data file & orchestrate continuous deployments or zero downtime rolling updates. Worked on **Ansible Tower** which provides an easy-to-use dashboard, & role-based access control.
- Collaborated with numerous Agile Development Team to effectively regulate branching and tagging of code within a repository and utilized **Git**, **Bitbucket** and **team foundation server (TFS)** for codebase integrity maintenance. Setup **SCM Polling** for Immediate Builds with Maven and **Maven Repository (Nexus Artifactory)** by installing Jenkins Plugins for **GIT Repository**.
- Skilled in monitoring servers using **Nagios**, **Splunk**, **ELK**, **Dynatrace**, **Datadog**, **AppDynamics**, **New Relic**, and **CloudWatch** for Resource, Network, and Log Trace Monitoring, created geo-mapping visualizations using **Kibana** in integration with **AWS CloudWatch** and **Lambda**. Evaluated system logs using **ELK** software stack and visualizing them using **Nginx**. Experienced in systems and **application monitoring** and **log aggregation**, including **custom dashboarding**, primarily with **Datadog**, **LogicMonitor**, and **CloudWatch**.
- Extensively involved in setting up **JIRA** as defect tracking system and configured various workflows, customizing **JIRA** and Confluence to take the forefront of the new systems.

COMPETENCIES

CI/CD	Jenkins, Hudson, Bamboo, Maven, Ant, Gradle
Scripting	Bash/Shell, Ruby, Python, Perl, PHP, PowerShell, JSON, YAML, HTML5, JavaScript
Version Control	GIT,GitHub,GitLab, Bitbucket, Azure Repos, SVN
Infrastructure-as code	ARM Templates, Cloud Formation, Terraform
Virtual Machines	Docker, Virtual Box, IIS, Windows Server
Web Servers	Nginx, Apache HTTP server, Redis, IIS, Tomcat
Application Servers	JBoss 4.x/5.x, Apache Tomcat 5.x/7.x, Web Sphere, Web Logic
Monitoring	DataDog, Splunk, ELK, PagerDuty, Cloud Watch
Logging Tools	Elastic Search, Fluentd, Kubetail, Stackdriver
Networking/Protocol	TCP/IP, NIS, NFS, DNS, DHCP, Cisco Routers/Switches, WAN, SMTP, LAN, FTP/TFTP
Container Tools	Kubernetes, EKS, AKS, Docker, Docker swarm, Open shift
OS	Windows Server 2012 r2/server edition, Mac OS
Linux Distributions	Ubuntu, Debian, CentOS, Red Hat Linux
Cloud Services	AWS, Microsoft AZURE, GCP
Database	My SQL, MS SQL, DynamoDB, Mongo DB, Cassandra, AWS RDS
Configuration Management	Chef, Puppet, Ansible

CERTIFICATIONS

- AWS Certified Solutions Architect- Associate.
- Hashicorp Certified : Terraform Associate.

PROFESSIONALEXPERIENCE

CLIENT: Heartland Payment Systems, Dallas, TX. Mar 2021 - present Role: Site Reliability Engineer

- Integrated **Datadog** with cloud environments (**AWS/Azure/GCP**) for real-time infrastructure observability and performance tracking.
- Provisioned and managed **HPC** (High Performance Computing) clusters using **Azure CycleCloud** for compute-intensive workloads.
- Deployed and managed containerized applications on **AKS**, implementing secure and scalable cluster configurations.
- Implemented **Azure** Virtual Networks, subnets, NSGs, Application Gateways configurations to ensure secure and high-performance networking.
- Built custom automation scripts for recurring cloud tasks using **PowerShell** and **Python** to reduce manual overhead and human error.
- Automated provisioning of **AWS** services (**EC2, S3, IAM, CloudWatch**) and Azure resources (**VMs, Storage Accounts, Key Vault, App Services**) using **Terraform** and ARM templates.
- Built end to end Infrastructure in Azure for hosting Azure CycleCloud Application on a Kubernetes **AKS** Cluster by creating Azure resources like **Azure subscriptions, Resource groups, KeyVaults, Managed Identities, AKS**, making peerings between subscriptions using routable virtual networks.
- Created Firewall groups to make connectivity between on-prem hosts and the resources running on **AZURE** and **AWS** clouds to have a DirectRouting by using tcp 443.
- Enabled secure access to **HPC** nodes via Azure Bastion and integrated **Azure AD** for centralized identity and role management.
- Built **LandingZones** to create Azure services like **virtual network, Key Vault, Virtual Machines, Managed Identities, Private endpoints, Storage** securely to maintain Scalable environments in Non-Prod and Prod.
- Managed LandingZone1 which is a huge monolithic repo that contains **Terraform** code for all LZ1 managed AWS Accounts. Created **Terraform** modules on LZ2 to maintain cloud based **AWS Terraform** based upon application usecase to create internal **TFE** module registries used by **AWS** Accounts/Fixtures to create resources.
- Modified existing **AWS IAM** roles and **Policies** via **Terraform** to modify **EBS Volumes**. Defined and deployed LifeCycle Management policy for **S3** buckets. Created new Secrets in **AWS Secrets Managers** via **Terraform**.
- Refactored **Kubernetes** standard pattern config in a template format to be used by different **AKS** clusters to reduce operational effort.
- Implemented **API Server VNET** Integration in Kubernetes Service allowing K8s API Server to communicate privately with virtual networks.
- Replaced existing **Azure VNET Peerings** with **Azure VNET Manager** to have a centralized network managing connectivity and security across multiple VNETs at scale and exclude 1-to-1 manual VNET peering via **Terraform**.
- Worked on Hygiene Tasks by Destroying unused **Azure CycleCloud** Plants by deleting **AKS** Cluster and the whole Infrastructure it has been built in a very secure and effective method without affecting other Resources on Azure.
- Worked on **HelmCharts** and yaml files to spin up and pods inside **AKS cluster** to host the High Performance Computing Application.
- Worked on upgrading **K8s** versions from **1.23 -> 1.25, 1.29, 1.31** and baseline versions. Implemented AKS Cluster power-down feature to Start/Stop the clusters whenever needed to maintain cost-optimization.
- Implemented a transitional usage of **Managed Identities** to **WorkLoad Identities** on all **AKS** clusters for secure authentication between the **Virtual Machines** and other Azure resources.
- Created Furnishings Pipeline to run the furnishings using **GitHub Actions**. Migrated all furnishings repositories and respective pipelines from **AzureDevops** to **Github**.
- Configured **Kubernetes** startup, readiness, and liveness probes to enhance container resiliency and reduce downtime.
- Implemented end-to-end **CI/CD** deployment to **AKS** using Jenkins pipelines integrated with **Helm** and **kubectrl**, enabling blue-green and canary deployments.

- Used **Azure Monitor** and **DataDog** for AKS monitoring setting up alerts for pod crash loops, failed deployments, and horizontal pod autoscaler thresholds.
- Developed, modularized, and version-controlled Terraform modules to manage resources across Azure and AWS, including **AKS, VMs, Storage, IAM roles, Networking, and Secrets**.
- Implemented **Terraform** state locking using **Azure Storage** with **blob** lease to prevent concurrent updates and ensure infrastructure consistency.
- Designed and maintained Jenkins pipelines for building, testing, and deploying cloud infrastructure and applications, using **Jenkinsfile** and shared libraries.
- Integrated **Datadog** alerts with **Slack** using webhooks to ensure real-time incident response and reduce MTTR.
- Configured log aggregation from containers and **VMs** into **Azure Log Analytics** and **Datadog** for centralized error analysis and correlation.
- Built custom dashboards for infrastructure and application health, tracking metrics like **CPU/memory usage, disk I/O, network throughput**, and pod/container states.
- Documented infrastructure architecture, IaC patterns, onboarding steps, failover, and backups on Confluence.
- Provided **24/7 on-call** production support as part of a rotating schedule using **PagerDuty**, ensuring rapid incident response and resolution for critical infrastructure and application outages coordinating with cross-functional teams for rapid remediation, and documented post-mortems to drive continuous improvement.

Environment: AWS (EC2, EBS, S3, VPC, Glue, RAM, DataLake, Code Deploy, Code Commit, Elastic search, Lambda, API Gateway, Route 53 (DNS), ECS, Athena, QuickSight, EMR, Kinesis, CloudFormation, RDS, DynamoDB, SNS, SES, SQS, IAM, RedShift, OpsWorks, Fargate, Airflow), Terraform, Maven, Rancher, Docker, Kubernetes, REST API, Jenkins, GIT, Python, ELK, JIRA, Azure Migrations, AKS, Azure CycleCloud, Ansible, Splunk, ELK, ECS,EKS, API Gateway, Nexus, Nginx, Red Hat, Linux, UNIX shell, Perl.

CLIENT: InComm, Atlanta, Georgia. Dec 2019 - Mar 2021 Role: Certified Sr. Cloud DevOps Engineer

- Created **AWS Cloud Formation** templates to create custom-sized **VPC, Subnets, EC2 instances, ELB, Security groups, IAM and Auto Scaling Groups**. Worked on tagging standards for proper identification and ownership of EC2 instances and other AWS Services like **Cloud Front, VPC, Cloud watch, RDS, S3, Route53, SNS, SQS, SES, Cloud Trail, Glue, Beanstalk, DynamoDB, AWS Lambda, Snowball, Elastic Container Service(ECS), EKS, CloudFront, CloudWatch, RDS, Redshift, API gateway, Kinesis, Airflow, GuardDuty, Sagemaker, Fargate**.
- Implemented **AWS Beanstalk** for deploying and scaling web applications and services with **Java, .NET, PHP, Python** and to perform health checks. Integrated **AWS Lambda** with **AWS DynamoDB** to automatically respond to events in **DynamoDB** streams. Integrated **AWS DynamoDB** using **AWS Lambda** to store the values of the items and backup the **DynamoDB** streams.
- Worked a lot on **Terraform templates** to create and deploy infrastructure like **S3 and DynamoDB** as backend, **custom-sized VPC, subnets, route tables** as Networking and Deployed **EC2 instances, ELB, security groups** for deploying **Jenkins** as a cluster of **Jenkins Master** and **slave nodes** using **ECS service**.
- Worked on **AWS EKS**, for deploying **docker images** that are already being used in **On-prem** applications as a part of migrating the application to cloud.
- Involved in using **Rancher** to provide a complete platform for operating **Docker** in production by creating files and structure needed to run **Docker images** through our private **Rancher Catalog**. Provided a consistent environment using **Kubernetes/Rancher** for deployment scaling and load balancing to the application from development through production, easing the code development and deployment pipeline by implementing **Docker Containerization**.
- Deployed application which is containerized using **Docker** onto a **Kubernetes** cluster which is managed by **Amazon Elastic Container Service for Kubernetes (EKS)** and configured '**Kubectrl**' to interact with **Kubernetes** infrastructure and used **AWS Cloud Formation Templates (CFT)** to launch a cluster of worker nodes on Amazon **EC2** instances.
- Developed **PySpark** and **SparkSQL** code to process the data in **Apache Spark** on **Amazon EMR** to perform the necessary transformations based on the **STMs** developed.
- Converted existing **AWS infrastructure** to server-less architecture (**AWS Lambda**) and deployed it via **Terraform**. Migrated data from Datacenters and on-premises to Cloud using **AWS Import/Export Snowball service**. Used **Terraform** scripts to Automate Instances for Manual Instances that were launched before.
- Worked on **Docker** to package an application with its dependencies into a standardized unit for Development and created custom docker images, tagging, and pushing the images to **ECR** required for **AWS batch** and **AWS Fargate** deployments and automated the installation of **Plugins using a Dockerfile and Plugins.txt file**.

- Implemented Data **extract, transform and load (ETL)** service that automates the time consuming steps of data preparation for Analytics using **AWS Glue**. Worked with **AWS Glue** jobs to transform data to a format that optimizes query performance for **Athena**. Wrote **AWS Glue scripts** to extract, transform, load the data.
- Created **Python** scripts to totally automate **AWS** services which includes web servers, **ELB**, **CloudFront distribution**, **RDS**, **EC2** and **RDS security groups**, **S3** bucket and application configuration, this script creates stacks, single servers, or joins web servers to stacks. Created resources centrally and used **AWS RAM** to share those resources with other **AWS** accounts.
- Converted existing **AWS infrastructure to server-less architecture (AWS Lambda)** and deployed it via **Terraform**. Worked with **RedHat OpenShift Container Platform** for **Docker** and **Kubernetes**. Used **Kubernetes** to deploy scale, load balance and manage Docker containers with multiple namespace versions.
- Used **Amazon Airflow** for complex workflow automation. The process automation is done by wrapper scripts through shell scripting. Implemented **Database Migration** to **AWS** cloud using **DMS** and **Airflow** and implementing backup strategies, monitoring DB on **AWS**.
- Built and deployed the application code using **CLI** of **Kubernetes** like **kubectrl**, **kubelet**, **kubeadm**, **Kubespray** and Schedule the jobs using kube-scheduler, Managed **K8s** charts using **Helm** and created reproducible builds of the **Kubernetes** applications and managed **Kubernetes** manifest files and releases of **Helm packages**.
- Handled **migration** of on premises applications to cloud, and used **Snowflake** which provided unlimited storage capacity, cloud-scaling and low-cost storage pricing needed for **data lake** for **migrating** **Azure** data sets and worked on running the **Snowflake SaaS Data Warehouse** and created resources in cloud to enable this and expert in deploying of **OpenStack** on **Azure** platform and handling issues related to **RDP** of **Azure** Infrastructure.
- Implemented cluster services using Docker and Kubernetes to manage local deployments in Kubernetes by building a self-hosted Kubernetes cluster using **Terraform** and **Ansible** and deploying application containers.
- Written **Ansible Playbooks** with **Python SSH** as the Wrapper to **Manage Configurations** of **Azure Nodes** and Test Playbooks on **Azure instances** using **Python SDK** and Automated various infrastructure activities like continuous deployment, application server setup, Stack monitoring using **Ansible playbooks**.
- Worked on **AWS Kinesis Firehose**, **AWS Kinesis Analytics** and **AWS QuickSight** to receive data from the **AWS IoT**, analyze it and display the IoT data in the **QuickSight** dashboards.
- Building/Maintaining Docker container clusters managed by **Kubernetes**, **Linux**, **Bash**, **Git**, **Docker**. Utilized **Kubernetes** and Docker for the runtime environment of the **CI/CD** system to build, test deploy.
- Used **Terraform** in **AWS Virtual Private Cloud (VPC)** to automatically setup and modify settings by interfacing with the control layer. Virtualized the servers on **AWS** using **Docker**, created the Docker files and version control to achieve **Continuous Delivery** goal on a highly scalable environment, and used **Docker** coupled with load-balancing **Nginx**.
- Configured **VPC Endpoints** to access objects in **S3** buckets using an internal connection instead of routing traffic through the internet. Configured **JIRA** workflows according to the needs to the CM team and integrated the project management features with the build and release process.
- Setup **AWS** infrastructure monitoring through **Datadog** and application performance monitoring through **AppDynamics**. Automated **Datadog** Integrations through **Ansible** Scripts for QA, Regression and Prod environments. Automated **Datadog** Dashboards with the stack through **Terraform** Scripts. Integrated **Datadog** in **Jenkins** pipeline and Automated the Dashboard and Alerts.
- Experience in real-time monitoring and alerting of applications deployed in **AWS** using **CloudWatch**, **CloudTrail**, **DataDog**, **Pagerduty**, **Splunk** and Simple Notification Service. Installed **DataDog** Agent in all Service for monitoring the resources.
- Integrated **AWS** with other systems like **Jenkins**, **Ansible** and **HP** service Manager to develop **CI/CD** pipelines for automating **Prod** deployments using **REST APIs**.
- Recognize, adopt, and install the best practices in security engineering fields throughout the organization: development, cryptography, network security, security operations, and incident response. Involved in **JIRA** as a defect tracking system and configure various workflows, customizations and plugins for **JIRA** bug/issue tracker, integrated **Jenkins** with **JIRA**, **Git**. Used **Git** for change submissions in **Gerrit** Code Review.

Environment: **AWS** (EC2, EBS, S3, VPC, Glue, RAM, DataLake, Code Deploy, Code Commit, Elastic search, Lambda, API Gateway, Route 53 (DNS), ECS, Athena, QuickSight, EMR, Kinesis, CloudFormation, RDS, DynamoDB, SNS, SES, SQS, IAM, RedShift, OpsWorks, Fargate, Airflow), **Terraform**, **Maven**, **Rancher**, **Docker**, **Kubernetes**, **REST API**, **Jenkins**, **GIT**, **Python**, **ELK**, **JIRA**, **Azure Migrations**, **AKS**. **Java**, **Ruby**, **SonarQube**, **Blackduck**, **CheckMarx**, **Ansible**, **Splunk**, **ELK**, **ECS**, **EKS**, **API Gateway**, **Nexus**, **Nginx**, **Red Hat**, **Linux**, **UNIX shell**, **Perl**.

CLIENT: Sempra Energy, San Diego, California, United States. Sep 2018 - Nov2019 Role: Sr. DevOps Engineer

- Configured **Azure** cloud services, **Azure storage**, **Azure active directory**, **Azure Service Bus**. Created and managed **Azure AD** tenants and configured application integration with **Azure AD**, **App service**.
- Provisioned **Azure** resources like **SQL Database**, **Web App**, **Logic Apps**, **Storage Account**, **Redis Cache**, **Virtual Machine**, **IoT Hub**, and **HDInsight** using **Azure Resource Manager (ARM)**, **Cosmos DB**.
- **Azure PaaS** Solutions like **Azure Web Apps**, **Redis Cache**, **Application insights** **Azure Server less Functions**, **Azure Stream Analytics**, **SQL Azure** and **Storage**.
- Worked on creating the **Azure Data Factory** pipelines to process the files from **SFTP** folders and send out the notification emails using the **logic apps**.
- Primarily focused on **Microsoft Azure** features with providing **ETL**, **Azure Power BI** service deployment to multiple users, API integration with multiple teams, solution for Azure chatbots using AI for simple customer questions, Azure log analytics of systems.
- Setup/Configure Integration Runtime for **Azure Data Factory**, Enable **SSISDB** for Management Instance in Azure, created gateway between **Data Factory** and on-premise database, Using **Azure Data Factory** to upload **SSIS** package to transfer data, initial setup for Converting **SSIS** from **Azure Iaas** to **Paas**.
- Created **build** and **release pipelines** in **VSTS** and worked on deployments using **SPN** secure endpoint connection for implementing **CI/CD** and worked on automation for deployments by using **YAML scripts** for massive builds and releases and deployed the services by **VSTS Azure DevOps pipelines**.
- Configured **Continuous Integration** from source control, setting up build definition within **Visual Studio Team Services (VSTS)** and configured **continuous delivery** to automate the deployment of **ASP.NET MVC** applications to **Azure web apps** and managed **Azure Active Directory**, **Office 365** and applied upgrades on a regular basis.
- Worked on **migrating** **SQL** server database to **SQL Azure database** using **SQL Azure migration** wizard and working knowledge on **Azure Fabric**, **Micro services**, **IoT & Docker** containers in **Azure**.
- Designed capacity and architecture plan to create the **Azure** Cloud environment to host migrated **IaaS VMs** and **PaaS role** instances for refactored applications and databases. Deployed infrastructure as a code (Ioc) application using **ARM Template** (JSON).
- Implemented Microservices, application development, and **migration** using **AZURE** services such as **Azure DevOps**, **Kubernetes Service (AKS)**, **Container Registry**, **Cosmos DB** and **Azure pipelines**, **Monitor**, **RBAC**, **Kubernetes AKS** and **Kubernetes API** to run workloads on **AKS**.
- Worked on setup the kubernetes **sandbox** on **Azure Kubernetes Services (AKS)** for testing the different features. ● Involved in Backing up and Recovering an **Azure Virtual Machine** from a Recovery Services **Vault** and **Azure Site Recovery Services**. Having a good knowledge of Understanding on Express Route, Network Security Groups, Storage Accounts, and Storage Explorer and Azure Architecture. Implemented **Office 365** and **Azure Active Directory** for single sign on, authentication, authorization and **Azure** Role-based Access Control (**RBAC**).
- Worked with **Terraform Templates** to automate the **Azure IaaS** virtual machines using **Terraform** modules and deployed virtual machine scale sets in production environment, and worked on **Azure Site Recovery** and **Azure Backup**- Deployed Instances on **Azure** environments and in Data centers and migrating to **Azure** using **Azure Site Recovery** and collecting data from all **Azure** Resources using Log Analytics and analyzed the data to resolve issues. Provisioned **Chef** server on **AWS** via **OpsWork** and this stack handles chef operations, backups, restorations, and software upgrade.
- Setup **Datadog** monitoring across different servers and **Azure** services. Created **Datadog** dashboards for various applications and monitored real-time and historical metrics. Created system alerts using various Datadog tools and alerted application teams based on the escalation matrix. Integrated **cloudcheckr**, **Datadog**, **Splunk** Dashboard with **Azure accounts**.
- Defined and managed release planning and branching strategy of **Github** servers. Also, helped educate the engineering community on the appropriate use of **Github**. As well as Implemented auto environment creation using **chef** and **Azure**.

Environment: AWS, Azure, SQL Azure Migration, Java, Python, Ruby, PowerShell, Github,Terraform, Jenkins, Docker, Kubernetes, Chef, Splunk, ELK, JIRA, Nginx, Red Hat, Linux, VSTS, UNIX shell, Perl, Office 365, Azure DevOps pipelines.
