SUMMARY

Full Stack Software Engineer with 5+ years of experience building **scalable applications**, modernizing **legacy systems**, and delivering **cloud-first** solutions for **cybersecurity**, **retail**, and **defense** sectors. Proficient in **Python**, **Flask**, **Django**, **FastAPI**, **React.js**, **Next.js**, and **SQL/NoSQL databases**, with strong focus on **OWASP security**, **API optimization**, and **automated testing**. Experienced in architecting **Azure** and **AWS** solutions with **Terraform**, **Docker**, and **Kubernetes**, improving application performance by **40%** and reducing deployment cycles by **60%** through CI/CD with **GitHub Actions**, **GitLab CI**, and **Jenkins**. Proven ability to deliver secure, **high-quality software** in **Agile** environments.

TECHNICAL SKILLS

Backend Technologies: Python, Java, Django, FastAPI, Flask, SQLAlchemy, Node.js, REST APIs, Microservices Architecture, System Design, Message Queues (e.g., Kafka, RabbitMQ, Celery).

Frontend Technologies: React.js, JavaScript, TypeScript, HTML, CSS, Bootstrap, Redux, Next.js, jQuery, Responsive Design, Component-Based Architecture.

Database Management: MySQL, PostgreSQL, Azure SQL, SQL Server, SSMS, Oracle, MongoDB, NoSQL, Database Optimization, Data Migration, Data Modeling, Redis.

API Technologies: REST, GraphQL, gRPC, WebSockets, API Gateway, Rate Limiting, API Security, API Key Management.

Security & Testing: JWT, OAuth 2.0, HTTPS, SSL/TLS, Data Encryption & Hashing (bcrypt), OWASP, pytest, Jest, Postman.

Cloud and DevOps: AWS, Azure, Docker, Kubernetes, GitHub, GitHub Actions, GitLab CI/CD, Jenkins, CI/CD Pipelines, Serverless Architecture, Container Orchestration, Terraform, YAML.

EXPERIENCE

Software Developer

May 2025 – Aug 2025

Moda Experts, Mason, Ohio

- Spearheaded the development of a **full-stack email security web application** to detect and mitigate **phishing**, **spoofing**, **spam**, and fraudulent email activities for **SMBs**, protecting over **500+ domains**.
- Enforced **IP-based API rate limiting** (max **5 requests/IP**) utilizing a **sliding window algorithm**, thwarting bot attacks, slashing malicious traffic by **40%** and elevating overall API reliability.
- Implemented **Redis caching** for high-frequency **DMARC data**, **reducing redundant database/API calls** by **65%** and decreasing average API response times by **45%**, enhancing system performance.
- Deployed **Celery-based distributed task** queues for **DNS lookups**, **MTA-STX validation**, blacklist checks, and **MX record retrieval**, enabling independent parallel execution and reducing heavy API call latency by **50%** without impacting other operations.
- Engineered scalable **Flask RESTful APIs (POST-only)** with **MVC architecture** and **SQLAlchemy ORM**, improving backend processing speeds by **35%** and ensuring secure, efficient data exchange.
- Followed **OWASP security best practices** in API design, enforced secure token storage with **cookie-based JWT authentication** and **RBAC (Admin/User roles)**, and hardened the application against **XSS**, **CSRF**, and **injection attacks**.
- Revolutionized the front-end architecture by crafting reusable **React.js** and **Next.js** components for seven key features and implementing **lazy loading**, improving individual component load times by **20%** and enhancing overall user experience.
- Automated parsing of **XML** and **EML** files to extract **email authentication** records and blacklisted IPs, accelerating threat detection workflows by **30%** and generating **weekly reports** with **98% accuracy** on delivery outcomes.
- Designed **GitHub Actions** pipelines with custom **YAML workflows**, reducing deployment cycle time by **60%**; deployed backend on **Azure App Service** with **Gunicorn** and frontend on **Azure Static Web Apps** with seamless **CORS integration**.
- Led **CI/CD** practices using **Git**, peer-reviewed **100+ PRs**, and ensured high code quality with **pytest** unit tests (targeting **95% coverage**) and **Jest** tests for frontend components.

Software Engineer

Jul 2024 – May 2025

L3Harris Technologies, Cincinnati, Ohio

- Engineered scalable **web applications** built with **Django**, **Django REST Framework**, and **React.js**, reducing backend response times by **25%** and leading the development effort.
- Pioneered a **Redux-based state management** solution, which accelerated front-end data processing speeds by **50%** and reduced memory usage by **20%**.
- Built **RESTful APIs** with **Django**, supporting **high-concurrency operations** with **real-time search**, **pagination**, and **sorting**, improving **data retrieval speeds** by **40%** and reducing **load times** for end-users.
- Integrated **PostgreSQL** and **MongoDB** databases, optimizing query performance and reducing retrieval times by **25%**.
- Implemented **CI/CD pipelines** with **GitHub Actions**, automating deployments and reducing manual intervention by **60%**, ensuring a seamless development workflow.

- Migrated **legacy applications** to a **containerized environment** using **Docker** and **Azure**, reducing server provisioning time by **50%** and improving system scalability.
- Hardened application security profiles by introducing **Role-Based Access Control** and **OAuth 2.0** authentication, ensuring zero instances where developers introduced security gaps into code.
- Modernized **debugging workflows** using **advanced tracing tools**, achieving substantial **performance improvements**, and resolving critical bottlenecks, which led to a **30% reduction** in system latency.
- Configured **Azure cloud infrastructure** using **Terraform**, cutting infrastructure spending by **20%** and improving resource utilization by **30%** through right-sizing **virtual machines**.

Software Developer

Aug 2023 – Apr 2024

84.51°, Cincinnati, Ohio

- Architected scalable **applications** leveraging **FastAPI**, **Django**, and **React.js**, achieving **99.9% uptime** and decreasing server latency by **20ms**, resulting in enhanced user experiences and system reliability.
- Orchestrated the **migration of legacy data** to a **hybrid database architecture**, shrinking query execution time by **30%** and boosting overall database capabilities.
- Standardized **software deployment** using **Docker containers** and reduced environment configuration errors by **15%** by implementing **automated builds** that cut down debug time by **7 hours per week**.
- Facilitated **cross-functional Agile/Scrum teams**, enhancing software delivery speed by **20%** through rigorous **sprint planning**, **daily stand-ups**, and thorough **retrospectives**, accelerating high-quality software solutions.
- Designed and maintained **CI/CD pipelines** using **Jenkins** and **GitLab**, automating the build, test, and deployment process, reducing the **release cycle by 40%**.
- Forged seamless **integration with five third-party APIs**, enriching **application functionality** by connecting external services and elevating overall **app performance by 15%**.
- Wrote **unit tests** using **pytest** and other testing frameworks to ensure **software reliability**, achieving **98% test coverage** for critical code paths.
- Restructured inefficient **database queries** and revamped **front-end rendering processes**, culminating in a **30% enhancement** in **application speed** and responsiveness, as measured by internal benchmarks.
- Spearheaded **migration of legacy systems** to **AWS cloud**, diminishing server downtime by **40%** and improving **application scalability**, resulting in faster response times for over **10,000 daily users**.

Full Stack Developer

Jun 2020 – Jul 2022

Vra Pvt Ltd, Hyderabad, Telangana, India

- Fabricated responsive **web components** using **React.js**, **jQuery**, and **Jest** testing framework, which accelerated **page load times** by **15%** and increased **mobile user engagement** by **20%**.
- Pioneered **Python** and **Django-based solutions** for **web apps**, orchestrating **AWS (EC2, S3)** deployment; slashed **data processing time** by **40%**, bolstered **hosting reliability**, and elevated **application availability** to **99%**.
- Conceptualized scalable **APIs** leveraging **Django REST Framework**; led to **40% increase** in concurrent system users, supporting **security policies** that met security control compliance.
- Amplified **PostgreSQL database performance** by refactoring **slow-running queries**, curtailing average query latency by **25%** and enhancing overall **data retrieval efficiency** for critical **reporting dashboards**.
- Conducted **unit testing** with **pytest**, achieving **98% test coverage**, and reducing **production bugs** by **25%**.
- Streamlined **development workflows** using **Git** for **version control** and **Docker** for **containerized deployments**, reducing setup time by **40%**.
- Led the **integration of third-party APIs** to enhance **application functionality**, including **payment processing** and **user analytics**.

EDUCATION

UNIVERSITY OF CINCINNATI

Master of Engineering in Computer Science

Cincinnati, OH

Aug 2022 – Apr 2024
