OBJECTIVE

Software Engineer with 5 years of experience in full-stack development (Spring Boot, Django, Node.js, React, Flutter) and cloud technologies (AWS, GCP). Recently transitioned into AI/ML after completing a Master's in Computer Science at UT Dallas, specializing in NLP, LLMs, and deep learning. Passionate about integrating AI into scalable applications, leveraging expertise in model development, fine-tuning, and deployment. Seeking opportunities in software engineering, full-stack development, and AI/ML to build scalable, intelligent applications that solve real-world problems.

EDUCATION

University of Texas, Dallas

Master of Computer Science, Data Science

Dallas, TX

Aug 2022 – May 2024

Indian Institute of Information Technology, Sricity

Bachelor of Science, Electronics and Communication

Sricity, India

Aug 2015 – May 2019

SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, C++, SQL, Go, Dart.

Backend & API Development: Spring Boot, Django, Node.js, Express.js, REST APIs, GraphQL, PHP.

Frontend & UI Development: React.js, AngularJS, Next.js, TypeScript, HTML, CSS, Flutter.

Cloud & DevOps: AWS (S3, EC2, Lambda, API Gateway, DynamoDB, IAM), CI/CD (GitHub Actions, Jenkins), GCP (Vertex AI, Cloud Run, BigQuery), Docker, Kubernetes.

Databases & Storage: PostgreSQL, MySQL, MongoDB, Firebase, Redis.

Machine Learning & AI: PyTorch, TensorFlow, Hugging Face, LangChain, Transformers, Fine-tuning LLMs.

EXPERIENCE

Software Engineer

May 2023 – May 2024

Erik Johnson School of Engineering and Computer Science

Dallas, USA

- Automated SDS PDF downloads using Node.js, reducing manual effort by 50% and enhancing operational efficiency.
- AI-Powered Document Processing: Built a document extraction pipeline using NLP and LLM, reducing manual data processing time by 50%.
- Engineered scalable Node.js microservices for secure database access to extracted document data, optimizing retrieval of processed information from the NLP/LLM pipeline.

Sr. Software Developer

Oct 2020 – Aug 2022

The Live Green Company

Bengaluru, India

- Led end-to-end development of 'Know Your Food' mobile app, managing full SDLC from requirements gathering and wireframe design through deployment.
- Built the app using Flutter and Dart to work on both iOS and Android, used Firebase to store data instantly and manage user logins, created a Django backend for handling app requests, and successfully launched the application on Google Play Store.
- Engineered an integrated portal for food science data that replaced fragmented Excel spreadsheets, enabling centralized data management, maintaining concurrency control, and accelerating data processing speed by 50%, significantly improving productivity for the food science department.
- Developed user-centric web applications with React and Tailwind CSS, optimizing UI/UX for increased user satisfaction.
- Designed and implemented a named entity recognition (NER) NLP model to automatically identify molecule names in scientific documents and research papers, reducing manual processing time by 80% and significantly enhancing the food science team's research efficiency.

Software Developer

May 2019 – Sep 2020

Dvara Solutions

Bengaluru, India

- Engineered RESTful APIs and microservices using Spring Boot, optimizing backend service scalability and efficiency.
- Optimized SQL queries for MySQL and PostgreSQL databases, reducing data retrieval times by implementing advanced indexing and query restructuring techniques.

- Resolved AngularJS frontend issues using browser developer tools, improving user experience through refined debugging processes.
- Collaborated with cross-functional teams to streamline CI/CD workflows using Jenkins for seamless deployment of the application on AWS ECS.

PROJECTS

GenAI Knowledge Base Enhancement

- Transformed CVS Health's internal knowledge base with a focus on enhancing user interaction through GenAI technology.
- Implemented large-scale RAG systems to handle over 10,000 documents efficiently.
- Significantly boosted employee productivity by streamlining access to knowledge resources through scalable GenAI applications.

Visualization with Spark Streaming, Kafka, and Kibana

- Fetched and processed real-time data from social media channels using Kafka and PySpark.
- Visualized processed data insights with Elasticsearch and Kibana.
- Developed a real-time data visualization tool that highlights trending topics, improving data-driven decision-making.
