

Saikrishna Gorrepati

Java Full Stack Developer

Objective

As a seasoned Java Full Stack Developer with over 6 years of hands-on experience, my primary goal is to further elevate my career trajectory by tackling complex projects that demand a blend of proficiency in both front-end and back-end development. I am passionately driven to leverage my expertise to overcome challenges and contribute to innovative solutions.

Education

Masters in Business Analytics from
Lewis University, USA

Experience

- Over **6 years** of experience in enterprise application development across diverse domains including **Finance, Healthcare, and E-commerce**.
- Proficient in analyzing, designing, and coding technical solutions using **Java/J2EE** technologies to meet business requirements.
- Expertise in frameworks such as **Spring (DI, IOC, AOP, Boot), Struts, iBatis, and Hibernate**.
- Skilled in **JavaScript** libraries like **Node.js, Ember.js, and Backbone.js** for front-end development.
- Experience in handling messaging services using **Apache Kafka** and implementing **AWS** solutions.
- Familiarity with **AWS** services such as **EC2, S3, RDS**, and integration with **Amazon SQS**.
- Strong understanding and application of **Agile** and **SCRUM** methodologies.
- Development experience in **Web** and Enterprise applications utilizing **JDBC, Servlets, JSP, EJB, JSF, JPA, JNDI, and JMS**.
- Deployed the Zero Down Deployment using **Kubernetes** orchestration service application
- Proficiency in **Kubernetes** for horizontal scaling and load balancing.
- Enhancement of search capabilities on **UI** using **SOLR**.
- Expertise in **Web Service Technologies** including **SOAP, REST, Microservices**, and associated tools.
- Hands-on experience in **DevOps** tools like **Jenkins, Gradle, GitHub, Docker** for **CI/CD** processes.
- Development of User Interfaces using **HTML5, CSS3, JavaScript, Dojo, Angular, React, jQuery, and Bootstrap**.
- Strong foundation in **Core Java** concepts, **AWS Lambda, DynamoDB**, and **STS** for serverless applications.
- Comprehensive understanding of **SDLC** phases, including Requirement Analysis, Design, Coding, Testing, and Implementation in Agile (**Scrum**) and **TDD** environments.
- Good Experience in software configuration management using **CVS, SVN, GitHub, GitLab, Bitbucket**.
- Expertise in using Spring frameworks like (**CORE, AOP, DI, SECURITY, IOC**).
- Proficient experience of using the databases such as **MySQL, DB2 Oracle 11g PL/SQL**.

Technical Skills

Languages	Java, PL/SQL, C/C++
Web Development	JavaScript, JQuery, JSP, HTML5, CSS3, AJAX, XML, Google Analytics, Angular js, ReactJS
Middle-ware	Web Services, Servlets, JDBC, DWR
Frameworks	Struts, Spring, Hibernate, JPA
Version Control Tool	CVS, SVN, Git and Clear Case
Testing Tool/Framework	Junit, Rational function Tools, JBlue
Application Servers	WebLogic, WebSphere, Apache Tomcat, JBoss, Glassfish
Build Tools	Ant, Maven, Hudson/Jenkins CI, SoapUI
Directory Services	LDAP in Federated Repositories, Active Directory, Oracle Virtual Directory
IDE	Eclipse, My eclipse, NetBeans, Spring Source Tool Suite (STS).
Operating Systems	Windows, Linux and Unix.

WORK EXPERIENCE

Client: CNA Insurance, Chicago, IL, USA

(Apr 2024 – Present)

Role: Java Full Stack Developer

Description: CNA Insurance provides comprehensive commercial insurance solutions, helping businesses manage risks and protect their assets with tailored coverage. I played a crucial role in developing innovative solutions to meet the company's evolving business needs while adhering to high standards of quality, security, and reliability.

Responsibilities:

- Utilized **Struts** tag libraries in JSP pages and implemented **OAuth 2.0** for **RESTful web services security**.
- Implemented multi-threaded synchronization processes with **JMS queues** for asynchronous request consumption.
- Developed **CI/CD** system with **Jenkins** on **Kubernetes** environment, leveraging **Docker** for runtime environment and **Stash** repository for version control.
- Developed **REST APIs** using Spring **MVC** and **Spring Boot**, hosting microservices on **PCF**.
- Monitored service health via **Spring Boot** admin console and **Swagger UI** for microservice documentation and testing.
- Designed **UI pages** using **HTML5**, **CSS3**, **JavaScript**, **jQuery**, and **Ajax** for interactive features. Supported various markets for alerts and **bugs**, analyzing and resolving issues.
- Configured **Apache** Cassandra for **scalable**, highly available data storage needs.
- Used **jQuery** to create interactive elements like accordions, drag-and-drop functionality, and modal windows.
- Configured **Bamboo** for cloud deployment on **PCF** and integration with **Git Hub**. **Managed OpenShift cluster**, **handling scaling** and maintenance of **AWS** app nodes.

- Implemented **Angular 11** Router Module for Single Page Application architecture and developed applications using **J2EE** and **Spring**.
- Proficient in **Java** applications development with **JDBC** and advanced multithreading. Extensive experience in developing **Microservices** using Spring frameworks and domain-driven design.
- Developed authentication services using **Node server**, transitioning from **LDAP** to Ping Access-SSO Application and utilized **IntelliJ** and **GIT** for development and version control.

Environment: Java 1.8, Spring Boot, Micro Services, Node JS, Angular 8, Spring Cloud, Struts, Azure, Dynamo DB, Code Commit, Code Pipeline, Kubernetes, Docker, Jenkins, AWS, Spring Tool Suite (STS), Oracle, Log4j, Agile, JIRA, Maven

Client: Caterpillar, Chicago, IL, USA

(Apr 2023- Mar 2024)

Role: Java Full Stack Developer

Description: Caterpillar Inc. powers industries worldwide with high-performance machinery, engines, and technology solutions, driving efficiency and productivity across sectors. I collaborated with UI/UX designers to create responsive and intuitive user interfaces using modern web technologies.

Responsibilities:

- Proficient in **Java 8.0** features including lambda expressions, parallel operations, and new Date Time **API**. Extensive experience in data ingestion technologies like **Kafka, Flume**, and **Sqoop**.
- Implemented **MVC** architectural pattern using Struts Framework, including **JSP, Servlets**, and Action classes.
- Configured **JIRA** issue tracking software with **Agile** plug-in across all company functions.
- Utilized Struts Framework for **SIT, UAT**, and implemented asynchronous messaging services with **JMS**.
- Developed **UI** components using **JavaScript** and **JSON** to interact with **RESTful** web services.
- Built Spring Boot Microservice architecture applications and deployed them to **AWS EC2** instances using **CI/CD Jenkins Pipeline**. Managed version control with **CVS** software.
- Leveraged Spring framework configuration files for object management and dependency injection.
- Implemented **OAuth2** tokens-based authorization schema for securing **Rest APIs** with Spring Security.
- Managed multiple tracks including business rules engine, **UI**, and reporting, and implemented multi-rack Cassandra cluster.
- Utilized **SAML 2.0** protocols for secure communication between **HTML** pages and developed **GUI** using **JSP, JSTL, AJAX, HTML, CSS**, and **JavaScript**. Managed and resolved bugs with **JIRA** bug tracking application.
- Implemented Spark Streaming projects, preferably using Scala, and **Spark SQL** for data processing.
- Employed **JMS** for asynchronous exchange of critical business data among **J2EE** components and legacy systems.
- Implemented **AJAX** calls from backend without page refresh using **jQuery, AJAX, Spring MVC**, and **Hibernate**.
- Transitioned **AWS** infrastructure from **Elastic Beanstalk** to **Docker** with **Kubernetes**.
- Developed responsive web application pages using **Angular 7/6** material and **Angular 8-Material services**, controllers, and directives for front-end **UI**. Consumed **RESTful** web service **API**.
- Proficient in **Amazon Web Services (AWS)** and **Amazon Cloud Services** like **EC2, S3, Simple DB, Cloud Watch, SNS, SQS**, and **Lambda**.
- Implemented online applications using **Core Java**, Multithreading, **JDBC, JSP, Servlets**, and **Webservices**.
- Developed applications using **Spring MVC, Spring IOC, Spring AOP**, and **Hibernate** frameworks.
- Implemented Microservices based on **RESTful API** utilizing **Spring Boot** with **Spring MVC**.

- Designed and developed **scalable**, high-performance applications with a focus on maintainability and efficiency.

Environment: HTML5, CSS3, JavaScript, jQuery AJAX, Bootstrap, AngularJS, EXTJS, NodeJS, Agile (SCRUM), Spring Boot, Hibernate, DynamoDB, Docker, Terraform, Nginx, GIT, JUnit, Maven, Restful, JAX-RS, Log4J, AWS, Swagger, Microservices, JIRA, Jenkins.

Client: TCS (British Telecom), Hyderabad, India

(Feb 2020 – Nov 2022)

Role: Java Full Stack Developer

Description: British Telecom (BT) is a multinational telecommunications company. I played a crucial role in developing innovative solutions to meet the company's evolving business needs while adhering to high standards of quality, security, and reliability

Responsibilities:

- Engaged in requirements understanding and participated in **SDLC** life cycle activities. Implemented **Hibernate** with annotation-based transactional support in **Spring** Framework.
- Managed containers using **Docker**, wrote **Docker files**, and set up automated builds on **Docker Hub**. Also, installed and configured **Kubernetes**.
- Utilized **JBoss** application server for **web application implementation**.
- Worked with server-side **CSS** pre-processing platforms like **LESS/SCSS** and **UI kits** such as **Node.js**, **Foundation**, and **Bootstrap**.
- Developed **SOAP web services (JAX-WS)** for data exchange between applications, including **WSDL** generation and service exposure.
- Proficient with **Linux** and **Windows** Virtual servers on **EC2** using chef servers.
- Created **JUnit** test cases for **DAO** and **Service Layer** methods, developed applications using Struts framework.
- Utilized **Apache Kafka** for messaging services and implemented Microservices architecture for modular and independent applications.
- Developed **REST** web services using **Jersey** with **OAuth** enabled for security. Implemented Spring Boot Microservices for modular functionality as per Microservices architecture.
- Built Spring Batch for managing **ETL jobs**, and worked with **ISO** Messaging standards. Designed and developed **Java backend** batch jobs for updating product offer details.
- Implemented **Kafka** high-level consumers to retrieve data from **Kafka** partitions and store in **HDFS** files. Involved in coding and building **Java** applications using **Core Java**, **Multithreading**, **JSP**, and **Servlet**.
- Used **ANT** as a build tool and operated within an **Agile** work environment.
- Developed application views using **JSP** pages with Struts tag library, combining **EJBs** and **Java** classes for the model, and Servlets for web implementation controllers.
- Engaged in maintaining several jobs on **ETL** data using Spring Batch. Played a role in designing and developing **Java** backend batch jobs for updating product offer details.
- Contributed to the **Agile** development process, ensuring efficient collaboration and iterative progress.

Environment: HTML5, CSS3, JavaScript, Angular JS 2/4, Express JS, Node JS, Angular Materials 2, Responsive Design, DOM, XML, XSLT, JSON, IntelliJ, Chrome, SOAP, agile and Mac OS Sierra, Jira, Kanban board.

Client: Natco Pharma, Hyderabad, India

(July 2018 – Jan 2020)

Role: Java Developer

Description: Natco Pharma is Multinational Pharma Company, I am responsible for designing, coding, testing, debugging, and maintaining software applications using Java technologies.

Responsibilities:

- Designed a validation service within the **Spring MVC** framework, integrating it with **MySQL** and implementing a **UI** feature.
- Took charge of deployment tasks, specializing in **CI/CD pipelines** and demonstrating proficiency with **OSE (OpenShift Origin)**. Modified Jenkins files as needed for pipeline requirements and integrated Gradle and **GitHub** with **Jenkins** for continuous integration.
- Successfully transitioned **SOAP** Webservices to **Spring RESTful** services utilizing **Spring RESTAPI** with **Spring Boot**.
- Utilized **jQuery APIs** for cross-domain calls and managing **JSON** responses.
- Developed **UI** using **JSP** following the **MVC** architecture.
- Collaborated directly with clients to conceptualize layout and color schemes for websites, implementing final designs using **HTML5/CSS3** and JavaScript with IntelliJ. Managed version control using **Git** and tracked defects with **Jira**.
- Implemented Spark and **Spark SQL** for rapid data processing and testing.
- Contributed to big data integration and analytics projects leveraging technologies such as **Hadoop, SOLR, Spark, Kafka, Storm**, and web Methods.
- Developed **J2EE** components using **Spring MVC, Spring IOC**, Spring Transactions, and Spring Security modules.
- Employed **JavaScript** and **jQuery** for frontend input validation.
- Created **REST APIs** using **Spring MVC** and Spring Boot, hosting all microservices on **PCF**.
- Participated in building and deploying **AWS** components like **EC2** and configuring **AWS S3** storage objects.
- Engaged in enhancing existing applications and building prototype layouts using **Angular 8**.
- Leveraged **AWS Lambda** to enhance backend processes and application performance.
- Utilized **Core Java** for multi-threading, collections, and **GUI AWT**, with additional experience in **Python** and the **Django framework**.

Environment: Java 1.6, J2EE, Servlets, JSP, Spring-MVC, IOC, AOP, Multithreading, Hibernate, Eclipse, Angular-JS, NodeJS, CSS3, HTML5, Web logic Server, WSDL, SOAP, JAX-WS, Tomcat, Oracle 11g, Oracle SQL Developer, Linux, PaaS, GIT, JIRA
