SUMMARY

Software Engineer with 4 years of experience designing and delivering enterprise-scale applications, cloud-native platforms, and AI-driven solutions. Skilled in building scalable microservices, architecting real-time data pipelines, and deploying secure, high-performance applications across AWS, Azure, and GCP. Proven ability to develop full-stack solutions using Java, Python, TypeScript, React, Angular, and Spring Boot, while leveraging Kubernetes, Docker, and Terraform for automation and cloud efficiency. Strong background in AI/ML integration, on-device inferencing, and distributed computing, with expertise in optimizing system performance, cost, and reliability. Adept at working in Agile environments, collaborating with cross-functional teams, and driving innovation in fast-paced enterprise ecosystems.

SKILLS

- **Programming Languages:** Java, Python, TypeScript, JavaScript, C#, C++, SQL, Go
- **Frontend Development:** React.js, Angular, Next.js, HTML5, CSS3
- **Backend Development:** Spring Boot, Node.js, Express.js, Django, .NET Core, Flask
- **Databases & Messaging:** MySQL, PostgreSQL, MongoDB, Redis, Cassandra, Apache Kafka, RabbitMQ
- **Cloud & DevOps:** AWS, Azure, Google Cloud Platform (GCP), Docker, Kubernetes, Terraform, Jenkins, GitHub Actions
- **API Development & Security:** RESTful APIs, GraphQL, gRPC, OAuth2, JWT, Swagger
- **Testing & Automation:** JUnit, PyTest, Jest, Selenium, Cypress, Postman
- **Monitoring & Observability:** Prometheus, Grafana, ELK Stack, Splunk, Datadog, CloudWatch
- **Machine Learning & AI:** TensorFlow, PyTorch, Scikit-learn, Hugging Face, OpenAI API, LLM Integration
- **Operating Systems:** Windows, Linux, Unix
- **Agile & Collaboration:** Scrum, Kanban, Jira, Confluence, Git, GitHub, GitLab

WORK EXPERIENCE

Dell Technologies

July 2025 – Present

Software Engineer

- Designed and developed enterprise-grade microservices using Java and Spring Boot, enabling scalable and secure solutions for AI-driven and edge computing initiatives.
- Engineered real-time data pipelines with Apache Kafka, Redis, and Cassandra to collect, process, and analyse telemetry and performance metrics across large-scale device fleets
- Deployed, optimized, and maintained applications on AWS leveraging Kubernetes, Docker, and GitHub Actions CI/CD, reducing release cycle times by 45% while ensuring high availability and fault tolerance.
- Implemented monitoring and observability frameworks with Grafana, and Datadog, providing proactive insights into system performance, reliability, and cost optimization.

LexisNexis

November 2019 – July 2023

Software Engineer

- Led the Document Management & DMS Integration Enhancements project, modernizing enterprise-grade legal research platforms with secure document upload, OCR indexing, and seamless integration into LexisNexis workflows.
- Developed backend services in Spring Boot to enable versioning, role-based access control, and scalable document retrieval.
- Implemented RESTful APIs with OAuth2/JWT authentication to integrate DMS features into third-party systems and client applications.
- Enhanced front-end modules using Angular, HTML5, and CSS3, improving document search responsiveness by 30% and optimizing user experience for legal professionals.

- Built reliable data pipelines with MySQL, PostgreSQL, and MongoDB, supporting secure storage, metadata indexing, and rapid query execution.
- Deployed solutions across AWS and Azure hybrid cloud, leveraging Docker for containerization and Terraform + Jenkins for automated CI/CD workflows.
- Strengthened platform reliability by integrating RabbitMQ for asynchronous document processing and implementing monitoring with ELK Stack, Splunk, and CloudWatch.
- Conducted rigorous QA using JUnit, PyTest, Selenium, and Postman, reducing integration defects by 30% and ensuring compliance with security protocols.
- Collaborated cross-functionally in Scrum teams, utilizing Jira, Confluence, Git, and GitHub to manage sprints, code reviews, and documentation for enterprise-scale releases.

PROJECT

Cloud Cost Optimization Tool

- Designed a multi-cloud optimization platform for AWS, Azure, and GCP, leveraging Terraform, Kubernetes, and serverless pipelines to analyse resource utilization and recommend cost savings strategies.
- Built interactive dashboards with Angular, Grafana, and Prometheus to visualize cloud spend trends and support enterprise cloud governance.

AI-Powered Customer Support Chatbot

- Developed a conversational AI chatbot using Python, TensorFlow, and Hugging Face NLP models, integrated with enterprise RESTful APIs and gRPC APIs for seamless customer interactions.
- Implemented deployment on Azure Kubernetes Service with Docker and GitHub Actions, ensuring reliable performance and real-time inference in production environments.

EDUCATION

- **Master in Computer Science** **Aug 2023 – May 2025**
California State University, Long Beach | GPA: 3.4 / 4.0
- **Bachelor of Engineering in Computer Science** **Aug 2017 – May 2021**
Sathyabama Institute of Science and Technology, Chennai, India | GPA: 8.4 / 10

CERTIFICATION

- **AWS Certified Developer – Associate** | Amazon Web Services
