

Sri Harsha Mulluri
harsha.java010@gmail.com
+1 312 736 8460.

PROFESSIONAL SUMMARY:

- 8 years of professional experience in Java application development, covering the complete Software Development Lifecycle (SDLC) from requirements gathering through to deployment.
 - Proficient in Software Development Lifecycle (SDLC) from analyzing requirements and creating documentation to coding, testing, and maintaining production systems.
 - Extensive experience in developing Web applications using HTML, CSS, JavaScript, TypeScript, jQuery, Bootstrap, React, Angular, Node, XML, AJAX, JSON.
 - Experience in Front-End UI technologies like HTML5, CSS3, jQuery, JSON, Ajax, Bootstrap, and JSTL.
 - Experienced in deploying and managing Java Spring Boot microservices and React applications on AWS EC2, Elastic Beanstalk, and ECS.
 - Developed and designed SPA user interfaces in Angular JS, Angular 8/11/13/15, React, and Node.
 - Experience using one-way/two-way data binding, filters, UI routers, and creating custom directives in Angular.
 - Deployed full-stack applications to AWS using services like EC2, ECS, EKS, Elastic Beanstalk, Neptune, and S3.
 - Expertise in back-end/server-side Java technologies such as Web services, Java persistence API (JPA), Java Messaging Service (JMS), Java Database Connectivity (JDBC), and Java Naming and Directory Interface (JNDI).
 - Proficient in developing J2EE enterprise applications in Service Oriented Architecture and Micro Service Architecture.
 - Expertise in J2EE Technology- Servlets, Struts, Spring, JDBC, JTA, JPA, Hibernate and JMS.
 - Designed and integrated OAuth 2.0-based authentication using frameworks such as Spring Security OAuth2 and Keycloak, implementing multiple flows to secure RESTful APIs and frontend applications.
 - Skilled in managing storage and static content delivery using Amazon S3 and CloudFront with custom domain setup.
 - Strong experience in developing complete web applications using Java/J2EE, Servlets, Struts, Spring IOC, Spring MVC, Spring AOP, Spring Security, Spring Boot, Spring Cloud, Spring Web Flow, Spring Data, JDBC.
 - Experienced in using microservice architecture with Spring Boot based services interacting through a combination of REST and Apache Kafka endpoints.
 - Proficient in versioning software tools such as Subversion SVN, Bitbucket, GIT ensuring efficient collaboration and version management.
 - Proficient in build and DevOps tools, including Maven and ANT for project builds, Jenkins for CI/CD automation.
 - Automated infrastructure provisioning and configuration management using Terraform and AWS CloudFormation.
 - SonarQube for code quality analysis, and containerization technologies like Docker and Kubernetes for scalable and efficient application deployment.
 - Monitored logs and metrics using AWS CloudWatch, and ELK tech stack setting up custom alarms and dashboards for real-time system observability.
 - Excellent communication, collaboration, and leadership skills with the ability to work independently or within cross-functional Agile teams.
-

TECHNICAL SKILLS:

Programming Languages	Java, J2EE, SQL, Python, Javascript, Typescript
Web Technologies	HTML, CSS, jQuery, JSON, Bootstrap, Angular, NodeJS, React JS.
Databases	Oracle, MySQL, Mongo DB, SQL Server
J2EE Technologies& frameworks	JSP, Servlets, EJB, JSTL, JMS, Log4j, JDBC, Java Beans, JAX-RS, JAX-WS, Spring, Struts, Hibernate
Web services	SOAP and REST
Spring Modules	Spring Boot, Spring MVC, Spring DATA, Spring IOC, Spring Security, Spring Rest
Software Methodologies	Agile, Scrum, TDD
Build and Devops Tools	Maven, ANT, Jenkins, SonarQube, Docker, Kubernetes
IDEs	Eclipse, Web Storm, Spring Tool Suite, IntelliJ

Version Control Tools	GIT, SVN, Bit-Buckets
Cloud	AWS, Azure and GCP
Testing Tools	Junit, Log4J, Postman, SOAP UI, Playwright

PROFESSIONAL EXPERIENCE:

Abbott, Chicago, IL.

August 2022 - Present

Full Stack Java Developer

Responsibilities:

- Developed RESTful Web services to fetch data from the client side and performed REST API calls using Angular.
- Enhanced design and API development on Java 21 for multi-tier applications using J2EE technologies including Spring MVC, Spring Boot, Spring Data, and Spring AOP.
- Used Java 21 lambda expressions and parallel streams for chain operations like filter, map, and collect on collections for improved performance.
- Designed and developed user interfaces using HTML, XHTML, CSS3, JavaScript, jQuery, AJAX, JSP, JSF, and Angular 14, implementing a responsive grid layout.
- Migrated applications from Angular 8 to Angular 14, ensuring compatibility and performance improvements through modularization and improved change detection strategies.
- Utilized Angular router to establish module-wide routing and crafted diverse forms using Angular data-driven and template-driven approaches.
- Created Docker images for Java microservices and deployed them on AWS ECS clusters.
- Managed application state and handling events using vanilla JavaScript and custom solutions.
- Built applications using Java 21, applying advanced features like Lambda expressions, array operations, and collection framework enhancements.
- Designed and actualized applications utilizing Spring Boot, Spring MVC, Spring IOC, Spring AOP, Spring Transactions, and Spring JDBC.
- Responsible for implementing business requirements through Spring Security, leveraging OAuth 2.0 workflows (Authorization Code, Client Credentials, Refresh Token flows) to establish secure authentication across distributed microservices and APIs.
- Implemented Apache Kafka for high-throughput, asynchronous, event-driven communication across distributed microservices, building producers, consumers, and topic-based pipelines.
- Leveraged AWS Neptune to unify and analyze multi-source healthcare data, enhancing clinical decision-making and accelerating detection of correlations between medical devices, treatments, and patient health outcomes.
- Automated build and deployment processes using AWS Code Pipeline, Code Build, and Code Deploy integrated with GitHub.
- Deployed Micro-services as Restful Java Web Services on Amazon Elastic Beanstalk.
- Deployed Spring Boot-based microservices Docker container using Amazon EC2 container services and using AWS admin console.
- Used Kubernetes to deploy scale, load balance, scale and manage docker containers with multiple namespace versions.
- Involved in loading the data to MongoDB with the help of Java API.
- Set up AWS Lambda functions for background tasks and asynchronous processing and used AWS CloudWatch for monitoring application logs and setting up custom alarms for performance metrics.
- Advancement completed under Eclipse/Intelli J Integrated Development Environment (IDE).
- Implemented Selenium and Cypress for end-to-end testing of Angular-based frontends.

Bank of the West, Omaha, NE.

April 2019 - July 2022

Full Stack Java Developer

Responsibilities:

- Developed and maintained RESTful APIs using Java, Spring Boot, Hibernate, and JPA for scalable enterprise applications.
- Developed and supported front-end applications using J Query, JSP, and JavaScript focusing on improving user experience and optimizing performance.
- Developed dynamic web applications using React JS, optimizing performance with component-based architecture and state management.
- Designed relational database schemas and implemented data access layers using MySQL, PostgreSQL and connected Oracle databases to Java back-ends via JPA, ensuring smooth data transfer and CRUD functionality.

- Integrated RESTful APIs and handled asynchronous data flows efficiently with React Hooks and Redux, ensuring smooth user interactions.
- Developed dynamic and responsive single-page applications (SPAs) using React.js, enhancing overall user experience and performance.
- Integrated React frontend with Java Spring Boot REST APIs, ensuring seamless end-to-end data flow and UI responsiveness.
- Worked with Docker Compose for local development, testing of multi-container applications and maintained custom Docker files and multi-stage builds for efficient image creation.
- Secured APIs using Spring Security and implemented JWT-based authentication and role-based authorization.
- Managed CI/CD pipelines within Kubernetes environments, refining automated processes for deploying and managing containerized apps with focus on ensuring reliability and facilitating continuous delivery throughout the software lifecycle.
- Deployed SonarQube for code quality assessments and Jenkins for CI/CD pipelines.
- Developed and optimized graph database solutions using AWS Neptune (Gremlin queries) to map and traverse customer–account–transaction networks, enabling real-time detection of suspicious patterns and money-laundering risks.
- Implemented secure API communication and static site delivery using Amazon CloudFront with custom SSL and domain routing via Route 53.
- Applied unit testing with Jest and React Testing Library to maintain high test coverage, reliable UI behavior and used JUnit/Mockito for integration testing.
- Collaborated with security and compliance teams to integrate Terraform-based infrastructure policies with tools like Sentinel, OPA, or Terraform Cloud for policy enforcement.
- Used AWS CloudFormation and Terraform to automate infrastructure provisioning and configuration management.
- Configured and monitored application logs and metrics using AWS CloudWatch, setting up custom dashboards and alerts for proactive incident response.
- Leveraged AWS Lambda for background task processing, image handling, and other serverless operations in a microservice environment.

FedEx, Memphis, TN.

June 2017 - March 2019

Java Developer

Responsibilities:

- Participated in the full software development life cycle, including user interactions, requirement analysis, design, development, and testing.
- Participated in daily Agile standups, sprint planning, and code reviews, collaborating with cross-functional teams to deliver features on time.
- Built secure REST APIs and integrated with Amazon API Gateway, handling throttling, request validation, and logging.
- Integrated third-party libraries and APIs with React.js applications to extend functionality and meet business requirements.
- Used Java 8 features in developing code like Lambda expressions, creating resource classes, fetching documents from database.
- Used Multithreading to improve the performance of processing of data feeds.
- Developed Kafka consumers and producers to enable data communication between microservices.
- Implemented JWT-based authentication compliant with the OAuth 2.0 protocol in backend APIs, enabling secure user login, authorization, and role-based access management.
- Implemented Microservices to make the application run on all possible platforms using Spring Boot.
- Developed and deployed microservices applications, contributing to improved system performance and resource utilization.
- Utilized Spring MVC Framework's Dependency Injection to integrate various Java components.
- Worked with Spring MVC Controllers and employed Spring Hibernate templates.
- Configured, deployed, and maintained Java web applications on Apache Tomcat, optimizing server performance and resolving deployment challenges.
- Used Maven scripts for application building and deployment, supporting continuous integration through Jenkins and Maven.
- Developed SQL queries and stored procedures to interface with Oracle databases.

EDUCATION:

University of South Florida, Tampa FL
Master of Science in Computer Science
