Mobile No. : +1 6023635556 ♦ E-Mail: saiharsha196@gmail.com

OBJECTIVE

Experienced IT professional with over 5 years of expertise in Java and J2EE technologies, specializing in the full software development life cycle (SDLC). Skilled in requirements analysis, project planning, system and database design, object-oriented analysis and design, development, testing, implementation, and documentation.

PROFESSIONAL SUMMARY

- Proficient in J2EE and MVC architecture, web services, and SOA including analysis, design, object and data modeling, integration, validation and deployment of applications.
- Expert in J2EE design patterns like MVC, Singleton, Session Facade, Factory, Abstract Factory, Business Delegate, DAO for building robust applications.
- Experience in developing server-side applications using Spring Framework including **Spring Boot, Spring MVC, IOC, AOP, Spring Data JPA, Spring Security** and **Spring Transactione**.
- Experienced in designing, implementing, and testing microservices-based architectures, with a focus on RESTful microservices using Spring Boot, Spring Data, and Java Persistence API (JPA).
- Strong Experience in **JAVA 8+** features like **Streams API, Lambda Expressions, Functional Interface, Optional, Date/Time API**.
- Strong Experience in Designing and Developing **REST** web services using **Spring boot REST**.
- Experience in developing Single Page Applications (SPA) using **JavaScript** MVC frameworks such as **Angular 12, React JS, Typescript**.
- Experienced in writing **Junit** test cases with **Mockito**, resolved bugs, and Java Message Services like **Apache Kafka** while implementing microservices.
- Experience with multiple **relational** databases like **SQL Server, MySQL, PostgreSQL**, and **NoSQL** databases like **MongoDB**.
- Experienced in using build tools such as Maven and Gradle, with hands-on experience working with version control systems like Git.
- Experience in deploying applications in **AWS** cloud using the **EC2** instance and creating snapshots for the data that had to be stored in **AWS S3**.
- Proficient in leveraging AWS cloud services such as S3, EC2, DynamoDB, SNS, SQS, CloudWatch, and Lambda.
- Possess a strong background in **CI/CD pipelines, DevOps**, and **Agile** methodologies.
- Experience in containerization of applications using **Docker, Kubernetes** and **OpenShift**
- Knowledge of integrating ETL processes with different databases such as **MySQL, MongoDB, PostgreSQL**.
- Proficient in writing SQL queries, stored procedures, and optimizing database performance.
- Well versed in using Software development methodologies like **TDD, Agile** methodologies like **Scrum** or **Kanban**, and **Waterfall software** development processes.
- Strong analytical and problem-solving skills, capable of identifying and resolving complex technical issues efficiently, ensuring smooth application performance.

EDUCATION

Arizona State University, Tempe, USA

May, 2024

- Master of Science in Electrical Engineering with Minors in Computer Science
- Thesis : LUCI - GUI Task Completion with LLM

Gayatri Vidya Parishad College of Engineering (A), Visakhapatnam, India

June, 2021

- Bachelor of Technology in Electronics and Communication Engineering

TECHNICAL PROFICIENCIES

Programming Languages: JAVA 11, Java 8 , Python, JavaScript, TypeScript, C

J2EE Technologies and Frameworks: Spring, Spring Boot, Spring MVC, JSP, JDBC, JWT, Hibernate, OAuth1 / 2

Web Technologies: HTML & CSS, JavaScript, Node.js, Angular, React.js, React Native

Databases: MySQL, PostgreSQL, MongoDB, Apache Cassandra

Message Queues: RabbitMQ, Kafka

Web Services: SOAP, REST

Build Tools: Maven, Gradle

Testing & Debugging: JUnit, Mockito, Postman, Selenium, Cypress, BrowserStack

Cloud Environment /DevOps: GCP, Docker, Kubernetes, Jenkins

Developer IDE Platforms: Eclipse, NetBeans, IntelliJ, Spring Tool Suite (STS), VS Code

PROFESSIONAL EXPERIENCE

ZitaTech, Houston, USA

May 2023 - Till Date

Full Stack Developer

- Collaborated across SDLC phases with cross-functional teams to develop a Financial Analytics and Reporting system, delivering real-time insights via interactive dashboards and comprehensive reports.
- Actively participated in the analysis, design, development, testing, and maintenance of applications using Agile methodology, including daily stand-ups and weekly sprints.
- Developed and maintained enterprise applications using Java, Spring Boot, REST, Spring Data, Spring Cloud, Spring Security, and messaging technologies, ensuring compliance with Test-Driven Development practices.
- Used Spring Dependency Injection, Spring MVC components, Spring Annotations, and other Spring Modules to implement the business layer and navigation part of the application.
- Implemented microservices architecture using Spring Boot, integrating RESTful APIs with Apache Kafka for scalable and secure communication.
- Utilized Spring JPA for secure database transactions, creating custom queries and optimizing performance to streamline workflows.
- Utilized Java 8 features, including Lambda Expressions and Streams, to optimize code performance, streamline data processing, and efficiently handle large financial datasets.
- Used core Java concepts like Collections, Generics, Exception handling, multithreading, IO, Singleton Concurrency to develop business logic.
- Created custom financial reports by leveraging JasperReports and Apache POI, generating dynamic PDFs and Excel sheets to meet business requirements and improve data accessibility for stakeholders.
- Developed dynamic web application using React.js, Typescript, HTML5, CSS3, JavaScript, and Bootstrap.
- Used HTML5 for displaying the contents required on a web page, CSS3 form styling, and Bootstrap for quickly designing and customizing the web pages.
- Developed reusable React components using hooks and Context API for state management. Integrated RESTful services with Axios and Fetch, implementing modern features like conditional rendering and form validation with React Hook Form.
- Developed reusable and scalable UI components, fostering a component-based approach in Micro Frontend development.
- Implemented performance optimization techniques for micro frontends, such as lazy loading and code splitting, to enhance application speed.
- Integrated Apache Kafka for real-time event streaming and message processing, improving data flow efficiency between distributed systems.
- Utilized Kafka Connect to integrate Kafka with data sources, sinks, enabling data synchronization and ingestion.
- Worked on developing and modifying the application program by Unit testing using different test scenarios and test cases using JUnit and Mockito for code quality.

- Demonstrated a strong understanding of SQL and ORM technologies, effectively managing relational databases such as PostgreSQL technologies when necessary for specific use cases.
- Extensive experience in managing, and developing PostgreSQL databases, including writing SQL scripts for DML operations.
- Utilized AWS Cloud Watch to monitor the performance environment instances for operational and performance metrics during load testing.
- Responsible for maintaining and expanding our AWS infrastructure using AWS EC2, triggering events through Cloud Watch, managing documents in S3, providing IAM access to S3 buckets.
- Used Kubernetes to orchestrate the deployment, scaling and management of Docker containers.
- Used Git for version control and deployed applications using Bamboo for continuous integration and continuous deployment CI/CD.
- Proficiently integrated CI/CD practices using Jenkins ensuring seamless code integration, testing, and deployment processes.

Environment:

Java 8 / 11, Spring Boot, Spring Data JPA, Apache Kafka, RESTful APIs, Micro services, Jasper Reports, Apache POI, JavaScript, React, HTML, CSS, AWS, Docker, Jenkins, Junit, Mockito, Postman, Log4J, IntelliJ IDEA, Git, Jira

MPS Lab, Arizona State University, Tempe, USA

October, 2021 - April, 2023

Research Software Engineer

- Implemented Agile, Scrum methodologies actively involved in technical meetings, requirements gathering, analysis, planning, effort estimations, development, and testing.
- Developed the backend server with Spring Boot, involving different layers of the application including entity/model, DAO/repository, Controller, Service, Business, and Persistence.
- Used Microservice architecture with Spring Boot based services interacting through a combination of REST and Apache Kafka message queues.
- Worked in core Java with strong understanding and working knowledge of Object-Oriented Concepts like lambda expressions, Parallel operations on collections, multi-threading, concurrency framework.
- Led the implementation of design patterns such as Data Access Objects and Value Objects/Data Transfer Objects to efficiently transfer data between application tiers, reducing network traffic during remote object invocations.
- Devised Streams and Lambda expressions available as part of Java 8 to store and process the data.
- Deployed MongoDB within a microservices architecture, enhancing data storage flexibility, scalability, and efficient management of large data volumes.
- Collaborated on implementing robust data security protocols in MongoDB, including role-based access control (RBAC) and encryption of data at rest, to protect sensitive financial information.
- Streamlined adeptness in constructing scalable and efficient server-side applications utilizing Node.js, tailored to the specific needs of the team.
- Engineered RESTful APIs to facilitate smooth communication between front-end and back-end systems, as well as Microservices, resulting in an increased application performance and scalability within the ecosystem.
- Generated comprehensive technical documentation, including API documentation and user guidelines, to facilitate seamless integration for fellow developers or clients.
- Rigorously tested APIs in Postman using collections provided by dependent databases, ensuring seamless integration and functionality.
- Excessively utilized the React framework, with a focus on building single-page applications (SPAs). Proficient in implementing routing, managing services, designing views, and employing directives to achieve a robust architectural design and user interface within the React ecosystem.
- Broadened expertise in SPA routing with React-Router-Dom and proficient state management using Redux.
- Implemented publish-subscribe and point-to-point messaging models using JMS.
- Developed multiple Kafka Producers and Consumers from scratch implementing organization's requirements. Configured deployed and maintained multi-node Dev and Test Kafka Clusters.

- Developed the application utilizing NOSQL on MongoDB to store data, enabling data analysis and monitoring of claims trends for organizations, fostering informed decision-making.
- Performed unit and integration test by writing Junit test cases using Junit Frameworks like Mockito.
- Used Git for version control and deployed applications using Jenkins for continuous integration and continuous deployment CI/CD.
- Deployed Micro Services, Docker container using Amazon EC2 container services and using AWS admin console.

Key Technologies:

Java, HTML, CSS3, JavaScript, ES6, JSON, Maven 3.0, Spring Boot, REST API, JPA, Kafka, Apache Kafka, Shell Scripting, JDBC, Jenkins, MongoDB, Docker, GIT, Eclipse IDE, Junit, Linux, AWS EC2, AWS S3, Spring Batch, Spring Data JPA, Eclipse, Jenkins, Confluence, Jira, SourceTree, Swagger, DB2, SQL Server.

Sama Veda IT Solutions, Visakhapatnam, India

April 2020 - August 2021

Jr. Software Engineer

- Adopted Agile and Test-Driven Development for a Billing Workflow Automation system, optimizing billing, dispute resolution, and payment reconciliation for accuracy and efficiency.
- Implemented Java 8 features like Lambda, Streams, and Predicates to reduce the line of code and better functionality in the Service Layer of the application.
- Implemented Spring MVC to integrate different modules, utilizing Spring AOP and Dependency Injection across various components of the project for enhanced modularity and cross-cutting concerns.
- Experienced in migrating legacy applications to REST-based microservices using Spring Boot, enabling full CRUD functionality.
- Designed and developed the REST-based Microservices using Spring Boot Swagger for API Documentation.
- Hands-on experience with writing PostgreSQL functions, stored procedures, triggers, and optimizing DDL/DML queries. Proficient in PL/pgSQL programming and utilizing COPY for efficient data loading.
- Implemented React Hooks for efficient state management, optimizing the application's data rendering and interactivity, reducing the code complexity and improving maintainability.
- Utilized asynchronous JavaScript (async/await) for efficient data retrieval, improving the performance of the application and enabling real-time updates on the account transactions.
- Developed automated unit tests for backend services using JUnit, ensuring reliable and bug-free releases.
- Designed and developed a framework to consume web services on AWS EC2, writing custom policies and deploying applications on Elastic Beanstalk and EC2.
- Experienced with event-driven and scheduled AWS Lambda functions to trigger various AWS resources.
- Used AWS SDK for connection to Amazon S3 buckets to store and retrieve the media files related to the application and Amazon Cloud Watch is used to monitor the application and to store the logging information.
- Monitored application performance post-deployment using AWS CloudWatch, ensuring uptime and quick troubleshooting of any issues in production.
- Participated in code reviews, ensuring adherence to coding standards and best practices, while collaborating with backend developers to resolve integration issues and optimize performance.
- Worked in an Agile development environment, participating in daily stand-ups, sprint planning, and delivering key features in line with project timelines.

Key Technologies:

Java8,, Spring MVC, Spring Boot, Spring data JPA, Postgresql, RESTful APIs, React, TypeScript, JavaScript (ES6+), HTML5, CSS3/SCSS, AWS EC2, AWS ECS, S3, CloudFront, Elasticsearch, Logstash, Kibana, Docker, Jenkins, Selenium, Cypress, BrowserStack, Postman, Git, GitHub, Jira
