Professional Summary:

- Full Stack Java Developer with 8+ years of experience designing, developing, and deploying enterprise-level applications using Java 21, Spring Boot, and Angular across cloud-native, microservices-based architectures.
- Proficient in Spring Boot, Spring Cloud (Eureka, Config, Gateway, Resilience4j), and Spring Security, building secure and scalable REST APIs integrated with Swagger (OpenAPI) documentation.
- Developed dynamic, component-driven frontends using Angular (8–17) with RxJS, NgRx, and TypeScript, delivering responsive and high-performance user interfaces.
- Strong experience with event-driven architecture, implementing Kafka, RabbitMQ, and AWS SQS/SNS for asynchronous communication and fault-tolerant processing.
- Skilled in SQL (PostgreSQL, Oracle, MySQL) and NoSQL (MongoDB, DynamoDB) databases, focusing on query optimization, schema design, and performance tuning.
- Experienced in automating batch workloads using Spring Batch, integrating with external APIs, file systems, and AWS services for ETL and bulk operations.
- Applied AOP for cross-cutting concerns such as logging, metrics, and transaction tracing, improving observability and maintainability of large systems.
- Built end-to-end CI/CD pipelines using Jenkins, Docker, Kubernetes, and Terraform, deploying containerized microservices on AWS (EC2, S3, RDS, Lambda, API Gateway).
- Implemented design patterns including Circuit Breaker, Retry, Saga, Factory, Singleton, and DAO to ensure maintainable, resilient, and modular applications.
- Experienced with SonarQube-based static analysis and CI quality gates, promoting DevOps culture and measurable code-quality improvements across teams.
- Strong advocate of Agile and DevOps culture; mentored junior engineers, conducted code reviews, and participated in sprint planning and retrospectives to drive consistent delivery.

Technical Skills:

Web technologies	HTML5, CSS3, JavaScript, TypeScript, RxJS, NgRx
Frameworks & Libraries:	Spring Boot, Spring Cloud (Eureka, Config Server, Gateway, Feign Clients, Resilience4j), Spring Security, Spring AOP, Spring Batch, Angular (8–17), Hibernate, JPA
Web Services:	RESTful APIs, SOAP, OpenAPI (Swagger)
Messaging & Event Streaming:	Apache Kafka, RabbitMQ, ActiveMQ, AWS SQS, AWS SNS
Databases:	PostgreSQL, Oracle, MySQL, MongoDB, DynamoDB

Cloud Platform:	AWS (EC2, S3, RDS, Lambda, API Gateway)
DevOps & CI/CD:	Docker, Kubernetes, Jenkins, Terraform, Maven, Git, SonarQube, Jacoco
Monitoring & Logging:	CloudWatch, Jenkins Logs (build monitoring), ELK Stack (Elasticsearch, Logstash, Kibana)
Security:	OAuth2, JWT, Spring Security
Tools & Methodologies:	JUnit, Mockito, Jasmine, Postman, Agile/Scrum, TDD

Experience:

BBVA Compass Bank| Birmingham, AL | (2023 Feb – Present)

Full Stack Java Developer

- Designed and developed Spring Boot microservices integrated with Spring Cloud Gateway, Eureka, and Config Server for dynamic service discovery and centralized configuration, utilizing Java Streams, Lambda expressions, and functional APIs to optimize data transformations and improve code readability.
- Built and documented RESTful APIs using Swagger (OpenAPI) and Spring REST Docs, automating API specification generation and version control for internal and external consumers, reducing onboarding time and integration defects.
- Created reusable Angular 17 components with NgRx for state management and RxJS observables for reactive data handling and asynchronous UI updates.
- Managed relational and NoSQL databases – PostgreSQL for transactional data and DynamoDB for fast, scalable document storage.
- Applied Resilience4j patterns (Circuit Breaker, Retry, Rate Limiter) combined with CompletableFuture-based asynchronous calls to enhance resilience, improve concurrency handling, and reduce response latency during peak loads.
- Configured Spring Security with OAuth2/JWT for secure authentication and role-based authorization across services.
- Implemented Spring AOP for cross-cutting concerns such as logging, transaction tracing, and performance metrics.
- Implemented centralized logging and analytics through the ELK Stack (Elasticsearch, Logstash, Kibana) and AWS CloudWatch.
- Implemented event-driven architecture using Kafka for high-volume internal streaming and AWS SQS/SNS for cloud-based message distribution and notifications, ensuring reliable asynchronous communication across services.
- Integrated Spring Batch for nightly ETL workflows, implementing multi-threaded step execution, chunk-based processing, and fault-tolerant retry mechanisms to efficiently handle millions of records with automatic recovery from transient failures.
- Automated infrastructure provisioning using Terraform modules with parameterized configurations, deploying Dockerized microservices on Kubernetes clusters across AWS (EC2, S3, API Gateway), ensuring repeatable and environment-consistent deployments.

- Integrated SonarQube and Jacoco into Jenkins CI/CD pipelines, enforcing static-code-analysis and achieving a 25 % reduction in technical debt.
 - Ensured high test coverage using JUnit, Mockito, and Jasmine, integrated within CI/CD pipelines via Jenkins.
 - Mentored junior developers, conducted peer code reviews, and guided best practices for microservice design and DevOps workflows.
 - Actively involved in Agile ceremonies, sprint planning, and backlog refinement, ensuring alignment with delivery milestones.
-

Progressive Insurance | Cleveland, OH | (2021 Aug - 2023 Jan)

Full Stack Java Developer

- Refactored monolithic policy modules into event-driven microservices, improving scalability and reducing deployment time by 40 %.
 - Developed Spring Boot microservices using Spring Cloud (Eureka, Config, Feign Clients) and orchestrated Saga pattern workflows to ensure consistency across distributed transactions, applying modern Java features such as Records, pattern matching, and functional-style collection operations to enhance data integrity and reduce boilerplate.
 - Implemented asynchronous service communication using Kafka producers/consumers and RabbitMQ exchanges, enabling event-driven coordination between microservices and reducing inter-service coupling.
 - Strengthened system reliability through Resilience4j (bulkhead, circuit breaker) and Spring Security (OAuth2/JWT), integrating custom authentication filters and token validation interceptors to enforce fine-grained access control and ensure non-blocking fault-tolerant communication.
 - Applied Spring AOP for metrics collection, auditing, and error logging, improving operational visibility.
 - Adopted Factory, Singleton, and Saga design patterns to simplify orchestration and promote clean, reusable architecture.
 - Designed Angular 13 frontends with Reactive Forms, Custom Pipes, and Reusable Modules, implementing RxJS Observables for reactive state management and asynchronous API communication, improving user responsiveness and maintainability.
 - Engineered Spring Batch workflows for scheduled policy updates and data aggregation, implementing multi-threaded step execution and retry mechanisms to increase throughput and reliability for large-scale datasets.
 - Leveraged Oracle for structured business data and MongoDB for document-centric storage, improving flexibility for semi-structured records.
 - Automated build and deployment pipelines through Jenkins declarative pipelines, integrating static code analysis (SonarQube), Jacoco coverage reports, and Docker image versioning, with deployments orchestrated through Kubernetes Helm charts for controlled rollouts.
 - Enforced code-quality gates via SonarQube and integrated Jacoco coverage thresholds, maintaining 90 % unit-test coverage.
 - Configured ELK Stack dashboards and CloudWatch alarms, decreasing mean-time-to-recovery (MTTR).
 - Performed extensive testing with JUnit, Mockito, and Postman, ensuring API reliability under varying load scenarios.
 - Participated in Agile ceremonies, mentored peers on microservices and testing, and coordinated with DevOps for production releases.
-

Catholic Health| Denver, CO | (2019 May - 2021 June)

Full Stack Java Developer

- Developed RESTful services with Spring Boot and Spring Data JPA, integrating controllers, services, and repositories using a clean layered approach.
 - Implemented Angular 8 SPAs with lazy-loaded modules, routing guards, and custom interceptors for secure and efficient UI workflows.
 - Integrated ActiveMQ for inter-service job queues and adopted Kafka for real-time event notifications, improving system responsiveness.
 - Utilized PostgreSQL for transactional data and applied stored procedures and indexing to optimize query latency.
 - Automated recurring reporting and data ingestion tasks with Spring Batch, reducing manual processing effort.
 - Secured backend APIs using Spring Security with token-based authentication and fine-grained access roles.
 - Containerized services with Docker and established automated deployment via Jenkins CI/CD pipelines.
 - Maintained standardized API contracts with Swagger (OpenAPI), simplifying client integration and version tracking.
 - Applied Test-Driven Development (TDD) and automated regression suites using JUnit, TestNG, and Mockito, increasing release reliability.
 - Collaborated closely with QA and DevOps teams during sprints to ensure timely, production-ready releases and rapid incident resolution.
 - Adopted Agile methodology for iterative development, backlog grooming, and continuous delivery alignment.
-

Delta Airlines| Atlanta, GA| (2017 Aug - 2019 Mar)

Java Developer

- Developed backend modules using Core Java, Spring MVC, Servlets, JSP, and JDBC for enterprise application workflows.
 - Designed and optimized MySQL database schemas, joins, and stored procedures to improve data access performance.
 - Implemented DAO and Singleton design patterns to modularize data access and enhance maintainability.
 - Followed object-oriented programming principles (encapsulation, inheritance, polymorphism) in application design to enhance maintainability.
 - Created and scheduled Spring Batch jobs for routine data synchronization and cleanup processes.
 - Secured application endpoints with Spring Security, implementing role-based access control and session management.
 - Built interactive front-end components using HTML5, CSS3, and JavaScript to improve form validation and user experience.
 - Assisted in integration testing, debugging, and deployment validation across development environments.
 - Collaborated in Agile ceremonies and documentation sessions to deliver iterative, high-quality releases.
-

Education:

Master of Science in Computer Science from *University of South Florida*, Tampa, FL

2025
