

Jeff Drummonds

Database Architect and Developer

3137195295 • Dearborn Heights, 48125, United States • jeff@drummonds.us
<https://www.linkedin.com/in/jeff-drummonds-70428772/>

Dynamic Senior Database Architect with over 15 years of experience in database administration and development, specializing in SQL optimization and data integrity strategies. Proven track record of enhancing performance through innovative solutions such as Power Automate workflows and SSIS packages. Achievements include reducing deployment times significantly and improving data retrieval speeds with advanced database tuning methods.

Work Experience

Database Administrator / Developer | Scrum Master

07/2023 – 06/2025

Tompkins Inc. • Orlando

- Facilitated daily Scrum meetings and delivered Power BI Scrum reports, enhancing team communication and project tracking.
- Engineered Power Automate workflows for DevOps alerts based on due dates, improving response times and task management efficiency.
- Tuned and optimized legacy SQL databases through indexing, primary key adjustments, and normalization, resulting in improved query performance and minimized downtime.
- Developed and executed comprehensive maintenance plans—including backups, re-indexing, and SQL Agent jobs—to ensure data integrity and system reliability.
- Instituted temporal tables and data retention strategies, leading to enhanced data retrieval speeds and effective performance management.
- Designed SSIS ETL packages for SFTP file ingestion and SQL data uploads, boosting data processing efficiency and reliability.
- Integrated SQL CLR assemblies with RabbitMQ to enhance message processing capabilities and overall system performance.
- Installed and configured Power BI Report Server (PBIRS), providing advanced data visualization and reporting capabilities.
- Developed an Excel Power Query solution to generate and deliver real-time project status updates for weekly management meetings.
- Automated weekly reporting by integrating Active Directory and Azure DevOps with Power Automate, generating status emails to developers and supervisors to improve visibility and oversight

NuTechs • Wixom

- Performed query tuning and troubleshooting of SQL job failures, significantly improving database performance and system reliability.
- Applied encryption and data governance standards (PII, constraints, usernames) to reinforce database cybersecurity and ensure regulatory compliance.
- Developed console applications to synchronize Active Directory user data, streamlining employee access management and decreasing manual errors.
- Implemented compliance enhancements using string_split, temporal tables, and constraints, ensuring adherence to regulatory standards.
- Engineered a driver's license scanning tool to minimize manual entry errors and enhance data entry accuracy and efficiency.

Lead SQL DBA / Developer | Team Manager

05/2010 – 09/2022

Unique Solutions of Advance Technology • Royal Oak

- Managed a 10-person team of .NET/SQL developers, improving project delivery timelines and fostering team collaboration.
- Led the design and implementation of a custom ERP system for Blue Water Trucking, On-Time delivery and logistics company, integrating dispatch, scheduling, billing, and reporting into a unified SQL-driven platform.
- Championed the development of a job application site using C#, SQL, and ASP.NET, aligning with key back-end programming practices.
- Reduced deployment time from 2 hours to 5 minutes by utilizing FileZilla and schema compare tools.
- Designed and supported custom solutions using SQL triggers, stored procedures, and SSRS, ensuring robust database functionality.
- Implemented SignalR-based SQL dependency tracking for real-time updates, enhancing system responsiveness and user satisfaction.
- Established structured role-based access controls leveraging Active Directory groups and schemas to authorize employee access and bolster data security.

Data Analyst | Application Developer

01/2001 – 12/2009

Ford Motor Co. / DTE Energy (via contract) • Dearborn

- Automated energy report generation using VBA and Access, reducing full-time equivalent workload to 4 hours/month.
- Collaborated with Siemens to successfully ingest 24/7 energy usage data across facilities, ensuring accurate and timely data availability.
- Developed Access/VBA applications for inventory, ordering, approvals, and project management, streamlining operations and improving process efficiency.
- Constructed systems for inventory management, repair dispatch, time reporting, and scheduling using SSIS and Power Automate, enhancing operational accuracy and efficiency.
- Integrated with Kelly Services for precise time tracking, which improved payroll processing and minimized errors.
- Facilitated the adoption and training of custom applications with Power Automate, resulting in heightened efficiency and user engagement.
