

Jason Walcott Full-Stack Java Developer | Java & Angular Expert

✉ jasonwalcott999@gmail.com ☎ 9125214570 📍 Newton, Georgia, US

📄 SUMMARY

I'm a full-stack engineer with +15 years deep of experience across **backend** and **frontend development**, specializing in building **scalable, cloud-native applications**. I'm proficient in **Java, Python, Go, and JavaScript/TypeScript**, with a strong foundation in **OOP, SOLID principles**, and **UML modeling**. I've optimized **PostgreSQL** queries at scale, architected **RPC/GraphQL/REST** APIs, and designed systems that scale to **hundreds of terabytes** of historical data. With deep experience in **Java, Spring Boot/WebFlux, Kubernetes, and GitOps**, I also bring exposure to large distributed data processing using Apache Spark. My backend expertise spans **microservices frameworks** like **Spring Boot, Spring WebFlux, Quarkus, and Micronaut**, while on the frontend, I've worked extensively with **Angular, React.js, and Node.js (Express.js, Hapi.js)**. I've led end-to-end development of **enterprise-grade systems** using **J2EE technologies (Servlets, JSP, JDBC, EJB)**, **design patterns (MVC, DAO, Singleton, Factory)**, and **event-driven architectures** with **Kafka** and **gRPC**. I'm comfortable working with both **SQL databases (Oracle, MySQL, PostgreSQL, DB2)** and **NoSQL databases (MongoDB, Cassandra, DynamoDB, CouchDB)**, with a focus on **performance tuning** and **schema design**. I also have experience with **big data processing** using **Apache Spark**.

In terms of **DevOps**, I've built **CI/CD pipelines** with **GitHub Actions, Jenkins, and Terraform**, and worked with **containerization** and **orchestration** tools like **Docker, Kubernetes, OpenShift, and Helm**. I've also implemented **Kubernetes Operators, Istio service mesh**, and deployed services across **AWS, Azure, and GCP**.

Security and **monitoring** are part of my toolkit too—I've implemented **OAuth2, OpenID Connect, and JWT**-based auth flows, and used **Prometheus, Grafana, ELK, and Splunk** for observability. Most recently, I've been integrating **OpenAI APIs** and deploying **machine learning models** with **TensorFlow, JAX, and TPU/GPU workloads**.

I enjoy solving complex engineering problems and building systems that are not just functional but also **resilient, efficient, and elegant**.

🧰 EXPERIENCE

05/2019 – 03/2025

Irving, TX, US

Veritis, Java Full Stack Developer

- Modernized legacy monolithic Java applications by refactoring them into microservices using **Spring WebFlux**, reducing system latency by 40%.
- Served as an **SRE** responsible for maintaining high availability and scalability of cloud-based **microservices** hosted on **AWS**.
- **Mentored junior developers**, conducted code reviews, and provided technical guidance to elevate team coding standards and architectural understanding.
- Developed and deployed RuleApps in **IBM ODM** Decision Server, enabling dynamic updates to business logic without code changes.
- Developed and maintained enterprise integration solutions using **Apache Camel** in a microservices architecture to streamline data flow between internal systems and third-party APIs.
- Developed **Single Page Applications (SPAs)** using **Angular 2+** and **RxJS**, focusing on component reusability and application flow control using **observables** and services.
- Refined front-end interfaces with **CSS, HTML5, and ES6**, ensuring **cross-browser compatibility** and enhanced UI responsiveness across major web clients.
- Integrated **OpenAI APIs** to power intelligent features like code generation, summarization, and automated task assistance within enterprise applications.
- Built prompt engineering workflows for zero-shot and few-shot learning tasks using **LLMs**, enhancing model accuracy in information retrieval use cases.
- Implemented end-to-end **ML** pipelines using **TensorFlow** and AWS **SageMaker**, reducing model deployment time by 40%.
- Built and deployed machine learning inference services using TensorFlow and JAX, containerized with Docker and orchestrated via Kubernetes on GCP.

jasonwalcott999@gmail.com

- Containerized applications using **Docker** and deployed to **Kubernetes** clusters with Helm, integrating services into **CI/CD pipelines** to streamline multi-environment releases.
- Developed microservices using **Quarkus**, enabling fast startup times and low memory footprint for deployment in **Kubernetes-native environments**.
- Collaborated with business analysts to gather rule requirements and translate them into executable rules using IBM ODM.
- **Led BCDR (Business Continuity and Disaster Recovery) planning and implementation** for Java-based enterprise applications, ensuring high availability and minimal downtime during critical failures.
- Designed and deployed scalable microservices on **Google Cloud Platform (GCP)** using **Java** and **Spring Boot**, leveraging services such as **Cloud Run**, **Pub/Sub**, and **Cloud SQL** to improve system reliability and reduce infrastructure costs by 25%.
- Worked with healthcare integration engines such as **Lyniate Rhapsody (v6+)**, configuring channels, filters, and message workflows to support HL7 and custom formats.
- Automated Java build and deployment processes using **Ant** and **Conduent Maven**, ensuring reliable and repeatable builds in CI pipelines.
- Integrated **SonarQube** into the **CI/CD** pipeline to perform continuous code quality checks, ensuring high standards of maintainability, security, and performance in Java applications.
- Designed and implemented **asynchronous messaging architecture** using **Red Hat AMQ / Apache ActiveMQ**, enhancing system decoupling and scalability.
- Designed components for **distributed systems** leveraging **Kafka**, **gRPC**, **Spring Cloud**, **Storm** and **Kubernetes**, ensuring system-wide fault tolerance and consistent state propagation.
- Built and maintained enterprise-grade web applications using **Angular 8+**, focusing on reusable components, state management with **RxJS**, and seamless **API integration**.
- Designed and developed over 15 **RESTful**, **GraphQL**, and **gRPC APIs** using **Spring Boot** and **Protobuf** for high-performance service interactions.
- Spearheaded implementation of **reactive microservices** deployed to **Kubernetes clusters** using **Helm**, **Istio**, and **Spring Cloud** components.
- Architected and deployed a **distributed Java system across AWS and Kubernetes clusters** to process real-time IoT telemetry streams, achieving sub-second processing latency at scale.
- Built multithreaded, distributed Java applications to handle high-throughput data ingestion (1000+ msgs/sec), integrated with **Kafka**, **AWS SNS/SQS**.
- Designed and maintained secure authentication flows with **OAuth2**, **JWT**, and **OpenID Connect**, integrated with **Keycloak** and **Okta**.
- Led development of **AWS Lambda** based APIs, configured via **Terraform**, using **API Gateway**, **DynamoDB**, and **S3**, achieving 30% reduction in infrastructure costs.
- Built ETL pipelines using **Apache Spark** and Java for batch processing of terabyte-scale data.
- Optimized **PostgreSQL** queries and indexing strategies, reducing query response time by 60% across datasets exceeding 10 TB.
- Spearheaded deployment of distributed microservices using **GitOps** via **ArgoCD**, rotating responsibilities as **release manager**.
- Scaled telemetry ingestion systems to process **billions of records**, leveraging Kafka, Spark, and optimized data partitions.
- Developed CI/CD pipelines with **Jenkins**, **GitHub Actions**, and **GitLab CI**, decreasing deployment failures by 50%.
- Implemented Kubernetes Operators for automated scaling and monitoring of microservices.
- Created dashboards using **React**, **Redux**, and **Java APIs**, enabling operational visibility for 50,000+ users.
- Integrated lightweight **C#** microservices for internal reporting tools, and implemented helper scripts in **Python** and **Go** for **CI/CD** automation tasks.
- Implemented **caching strategies** using **Redis**, and **Memcached**, reducing API response times by 50%.
- Mentored 10+ junior engineers and established coding guidelines, code review workflows, and onboarding documentation.
- Integrated healthcare terminologies like **LOINC** and **SNOMED** into EHR systems to enhance semantic interoperability.

Wednesday Solutions, Java Full Stack Developer

- Developed resilient **distributed microservices** for financial applications, integrating with message queues and event buses to maintain system availability and data integrity across nodes.
- Applied **Enterprise Integration Patterns** (e.g., Routing Slip, Splitter, Aggregator, Message Filter) to design modular, reusable, and maintainable integration workflows.
- Collaborated with **SRE** and DevOps teams to design fault-tolerant infrastructure using **Kubernetes** and **Helm**.
- Delivered scalable web applications using **Spring Boot**, **Spring Data**, **Hibernate**, and **React.js**, improving user experience and load time.
- Integrated **NPM-based** tooling for build optimizations, dependency management, and custom script automation in Angular projects.
- Contributed **Kotlin-based** modules for **REST API** endpoints and reactive **microservices** within the **Spring Boot** ecosystem.
- Implemented full-stack features including payment processing, user onboarding, and audit logging using **Angular 8+**, **Redux**, and **Spring Boot REST APIs**.
- **Configured and optimized Webpack builds** to support modular JavaScript architecture, enabling faster load times and improved maintainability.
- Developed **interactive front-end features** using **Vanilla JavaScript**, eliminating dependencies and reducing application footprint by **20%**.
- Designed and implemented **Camel routes** using Java DSL and Spring Boot for real-time processing of financial transactions, reducing latency by **35%**.
- Developed **single-page applications (SPAs)** using **Mithril.js**, focusing on high performance and low memory footprint.
- Leveraged **Quarkus extensions** such as RESTEasy, SmallRye OpenAPI, and Hibernate to accelerate enterprise-grade microservice development.
- Implemented **dead letter queues (DLQs)** and **retry policies** in AMQ to handle transient errors and improve message reliability and fault tolerance.
- Integrated **Kafka**, **RabbitMQ**, and **Spring Cloud** stack (Eureka, Zuul, Hystrix, Ribbon) for asynchronous communication and service discovery.
- Integrated service components using **event-driven and distributed system design patterns**, ensuring loose coupling and resilience in highly concurrent environments.
- Developed backend modules with **JPA/Hibernate**, integrated with **Oracle** and **Cassandra**, and optimized SQL queries using **PL/SQL**.
- Practiced **TDD** and **BDD** with **JUnit**, **Jasmine**, **Mockito**, **Cucumber**, and **Selenium**, leading to **40%** reduction in production issues.
- Built robust **automated frontend test suites** using **Jasmine** and **Karma**, enabling rapid regression testing and continuous delivery confidence in high-velocity release cycles.
- Designed and optimized complex **MS T-SQL stored procedures**, improving query performance and reducing execution time by over **40%**.
- Built and deployed containerized applications using **Docker**, with automated CI/CD pipelines in **GitLab** and **Jenkins**.
- Applied advanced **data structures and algorithmic analysis** to solve large-scale performance bottlenecks and design **object-oriented models** for complex domain logic.
- Deployed and maintained services on **AWS EC2**, **Lambda**, **RDS**, and **GCP GKE** clusters.
- Deployed and maintained Java-based web applications on **Apache Tomcat**, ensuring high availability and secure configurations.
- Assisted in migrating legacy **C++** modules into scalable Java components, and developed utility scripts in **Python** for log analysis and **Go** for asynchronous data sync.
- **Refactored SQL queries** in **Oracle**, and **PostgreSQL**, improving response times by **30%** through proper indexing, and optimization.
- Contributed to monitoring and incident response using **Splunk**, **ELK**, and **Grafana**.

02/2010 – 12/2014
Atlanta, GA, US

Arium, Java Full Stack Developer

- Collaborated with business analysts and QA to define technical requirements and translate into Java-based web services.
- Migrated SOAP-based web services (Axis2) to **RESTful APIs** using **JAX-RS**, **Jersey**, and **Spring MVC**.
- Migrated legacy messaging systems to **Red Hat AMQ**, reducing licensing costs and increasing maintainability.
- Developed and maintained enterprise-grade UI components using **Angular 1.x/2.0**, **Bootstrap**, **Material UI**, and connected them with Java-based backends.
- Used **Hibernate ORM**, **HQL**, and custom queries for persistence layer, mapped to Oracle and DB2 schemas.
- Designed and developed enterprise-level web applications using **Apache Struts**, implementing the **Model-View-Controller (MVC)** design pattern to ensure maintainable and scalable architecture.
- Developed dynamic and scalable web applications using **JavaServer Faces (JSF)**, leveraging its component-based architecture for efficient UI management.
- Integrated **Drools Rule Engine** for decision logic in business workflows.
- Designed and optimized complex **MS T-SQL stored procedures**, improving query performance and reducing execution time by over **40%**.
- Created build and deployment automation using **Maven**, **Grunt**, **Jenkins**, and source control with **Git/SVN**.
- Built end-to-end UI test suites with **Protractor**, **Selenium**, and **Cucumber (BDD)**. Managed containerized deployments using **OpenShift** and **Pivotal Cloud Foundry (PCF)** for enterprise applications.
- Utilized **Camel Timer**, **Split**, and **Aggregator** patterns to implement batch processing of large-scale datasets from external feeds.
- Worked with **Agile methodologies**, and participated in **Scrum meetings**, **sprint planning**, and **code reviews** to ensure quality deliverables.

SKILLS

Programming Languages

Java, Python, Go, JavaScript, TypeScript, SQL, PL/SQL, MS T-SQL, Bash, COBOL, C#, C++, Kotlin

CI/CD & DevOps

Jenkins, GitHub Actions, GitLab CI, Docker, Kubernetes, Helm, Terraform, ArgoCD(GitOps), LGTM stack

Databases & Caching

Oracle 19c/21c, MySQL, PostgreSQL(performance tuning, Citus), DB2, SQL Server, MongoDB, Cassandra, DynamoDB, Redis, Memcached

BCDR

Business Continuity Planning, Disaster Recovery Testing, RTO/RPO Optimization, Automated Backup & Restore (AWS Backup, Veeam)

Frameworks

Spring Boot, Spring WebFlux, Hibernate, Quarkus, Micronaut, Angular, React.js, Protobuf, Apache Struts, JavaServer Faces(JSF)

Messaging & Streaming

Apache Kafka, Apache Camel, RabbitMQ, ActiveMQ, JMS, GraphQL, GRPC, REST APIs

Security & Auth

OAuth2, OpenID Connect, JWT, Keycloak, Okta

Others

HL7, **LOINC**, **SNOMED**, Public Health Systems, Disease Surveillance, LIMS, Lyniate Rhapsody (v6+), IBM, ODM

Cloud Platforms

AWS (Lambda, EC2, RDS, SQS, EKS), GCP (GKE, BigQuery, Cloud Functions), Azure (AKS, Azure DevOps)

Testing

JUnit, Mockito, Selenium, Cucumber, Mocha, Chai

Tools

Git, Bitbucket, IntelliJ, Maven, Gradle, Jira, Concourse, Splunk, Prometheus, Grafana, Ant, Webpack, Tomcat, Apache

 EDUCATION

09/2005 – 05/2009
Georgia, United States

Bachelors, Georgia State University
