SUMMARY

Senior Java Developer with a passion for designing and implementing scalable, resilient, and efficient software solutions. With deep expertise in microservices architecture, I thrive in dynamic, innovation-driven environments where collaboration is key to success. My technical background, combined with a strong theoretical foundation in Computer Science and Engineering, allows me to effectively translate complex requirements into high-quality deliverables. I excel at leveraging cutting-edge technologies to enhance web application functionalities, optimize database interactions, and streamline project workflows using Agile methodologies. Committed to continuous learning, I have successfully contributed to various full-stack projects, consistently driving improvements in performance, security, and user engagement.

WORK EXPERIENCE

Walmart, 01/2022 – Present

Senior Full Stack Developer

- Monitored and resolved production issues using Java and SQL, ensuring minimum downtime and contributing to the smooth functioning of the business operations. Developed a Spring Boot application to enhance system features.
- Led the design and implementation of REST APIs using Java, Spring Boot, Hibernate, and JPA, with a strong understanding of MySQL and PostgreSQL, ensuring efficient data interaction for user-facing applications.
- Played an active role in the software development lifecycle, participating in design, coding, testing, and documentation processes, ensuring adherence to Agile methodologies.
- Developed SQL scripts for database maintenance, ensuring smooth data flow between applications. Conducted regular diagnostics and analysis to uncover root malfunctions and address them effectively.
- Collaborated on the design of high-performance backend services using Java and Spring Boot, handling millions of daily transactions and streamlining data access with Hibernate ORM.
- Maintained SQL scripts, stored procedures, and views on Oracle databases using PL/SQL, ensuring optimal performance and data consistency across the application.
- Collaborated with cross-functional teams to deploy using Git, GitLab, and GitFlow for version control, improving software quality and reducing release cycle times through CI/CD practices.
- Spearheaded the development of REST APIs to manage the IT hiring process, using Java 8 and Spring Boot, resulting in a more efficient workflow and streamlined candidate management.

Accenture, 05/2019 – 11/2021

Full Stack Developer

- Developed and maintained enterprise applications using Java, Spring Boot, and Hibernate, collaborating with cross-functional teams to ensure smooth integration and efficient system performance.
- Conducted load testing and performance tuning on the e-commerce platform, ensuring reliability and responsiveness during peak traffic, improving data access speed by 25%.
- Collaborated with business analysts to gather user requirements, translating them into technical specifications to ensure alignment between development efforts and business goals.
- Worked on monitoring and resolving production issues using Java and SQL, ensuring smooth operations and minimizing downtime for business-critical applications.
- Developed secure user authentication and authorization features using OAuth2 and JWT, ensuring the security of sensitive data and improving system resilience.
- Utilized Hibernate for ORM, streamlining database interactions, improving query execution times, and ensuring data accuracy and integrity in critical business processes.
- Led the design and implementation of a microservices-based ERP system using Java, Spring Boot, and Oracle Database, improving operational efficiency by 40%.

- Implemented CI/CD pipelines using Jenkins and GitLab, reducing deployment times by 35% and ensuring faster, more reliable releases.

Infosys, 06/2016 – 04/2019

Backend Developer

- Developed backend services for an online payment gateway using Java and Spring Boot, enhancing transaction speed and reliability, and supporting millions of daily financial transactions.
- Designed and implemented RESTful APIs, facilitating seamless integration with third-party systems and ensuring scalability of backend services.
- Migrated legacy monolithic applications to microservices architecture using Java Spring Boot, resulting in a 35% reduction in server costs and improved system performance.
- Conducted troubleshooting and diagnostics to identify and resolve backend issues, ensuring the smooth running of mission-critical systems.
- Developed high-performance applications for real-time data processing using Java, Apache Kafka, and Spark, improving data handling efficiency.
- Enabled the payment processing system to handle a 30% increase in transaction volume during peak periods through code optimization and efficient resource utilization.
- Participated in building a logistics tracking application using Java, enabling real-time data updates and enhancing decision-making capabilities.

CERTIFICATIONS & SKILLS

- Java (Core Java, Java2EE)
- Microservices architecture
- Spring Boot and Spring Cloud
- RESTful APIs design and implementation
- Angular for frontend development
- MySQL, PostgreSQL, MongoDB (Database management)
- Apache Kafka for event-driven systems
- Cloud platforms (AWS, Azure) and services (Lambda, EC2)
- Docker and Kubernetes for containerization and orchestration
- CI/CD pipelines (Jenkins, GitLab CI)
- Version control (Git, GitHub, Bitbucket)
- Agile/Scrum project management methodologies
- Object-Oriented Programming (OOP) principles
- Test-driven development (TDD) and automated testing (JUnit, Mockito)
- Authentication and authorization with Spring Security
- API documentation using Swagger/OpenAPI
- UI/UX design and front-end frameworks (Angular, React)
- JSON, XML, and data parsing techniques
- WebSockets for real-time communication
- Message queue systems (RabbitMQ, ActiveMQ)
- Version control (Git, GitLab)
- Web application security best practices
- Database schema design and normalization
- Code quality assurance and peer reviews
- Software lifecycle management and deployment
- (CI/CD) practices
- Scalability and performance enhancements

EDUCATION

Nanyang Technological University, Singapore

Bachelor of Science, Computer Engineering, 2015

GPA: 4.3 / 5
