

Mayoor Pogiri

Java Full Stack Developer

Email: p.mayoor@crispmails.com

Contact: +1 9563140016

Professional Summary

- Results-driven **Full Stack Java Developer** with 5+ years of experience designing, developing, and deploying scalable, high-performance web and enterprise applications across domains such as e-commerce, healthcare, and education.
- Proficient in **Java 17**, applying **OOP, OOD, and OOA** principles to build maintainable and efficient solutions using **MVC, SOA, and Microservices** architectures.
- Expert in **Spring Boot, Spring Cloud, Spring Security, Hibernate/JPA, Spring Batch**, and **Spring Integration** for developing secure, resilient, and distributed backend systems.
- Strong experience in **RESTful** and **GraphQL API** design, event-driven microservices using **Kafka, RabbitMQ**, and **IBM MQ**, and integration with legacy SOAP-based systems.
- Skilled in front-end development using **ReactJS, Angular, TypeScript, HTML5, CSS3, JavaScript, Bootstrap**, and **jQuery**, ensuring responsive and intuitive user interfaces.
- Hands-on experience with **CI/CD pipelines** using **Jenkins, Azure DevOps, GitHub Actions**, and **Bitbucket Pipelines**, integrating **SonarQube** for code quality and **Terraform** for infrastructure automation.
- Expertise in **containerization and orchestration** using **Docker, Kubernetes**, and **OpenShift**, enabling scalable and zero-downtime deployments.
- Experienced in **multi-cloud environments**, including **AWS (EC2, ECS, RDS, S3, Lambda, CloudFormation)**, **Azure (App Services, ADF, Active Directory, Cosmos DB)**, and **GCP (Compute Engine, Cloud Storage)** for cloud-native deployments.
- Proficient in **SQL and NoSQL databases** such as **Oracle, PostgreSQL, MySQL, MongoDB, DB2, Cosmos DB**, and **Redis**, with advanced query optimization and stored procedure development using **PL/SQL**.
- Implemented **TDD and Agile/Scrum methodologies**, utilizing **JUnit, Mockito, Jasmine, Karma**, and **Postman** to ensure test coverage, maintainability, and continuous integration.
- Developed and supported **Node.js, Express.js**, and **Python Flask** applications integrating RESTful APIs for data-driven solutions and automation workflows.
- Experienced in **application performance monitoring and observability** using **ELK Stack, Prometheus/Grafana, Splunk**, and **Application Insights**.
- Integrated **OAuth 2.0** and **JWT-based authentication** for secure identity management and access control across microservices.
- Deployed and maintained applications on **WebLogic, WebSphere, Apache Tomcat, GlassFish**, and **JBoss** servers.
- Worked with **MuleSoft ESB** and **IBM WebSphere ESB** for enterprise-level system integration and message routing.
- Proficient in build and dependency management tools — **Maven, Gradle, ANT** — and logging frameworks like **Log4j** and **SLF4J**.
- Strong version control and collaboration skills using **Git, SVN, CVS**, and **Rational ClearCase**.
- Developed and optimized code using modern **Java 17 features, multithreading, Streams API**, and **Reactive Programming** to improve performance and scalability.
- Hands-on experience in **distributed transaction management** using **Spring JTA** and **Atomikos** for ensuring consistency across microservices.
- Experienced in working across **Windows, Linux**, and **UNIX** environments using IDEs like **IntelliJ IDEA, Eclipse, NetBeans**, and **Spring Tool Suite (STS)**.

Technical Skills

Programming Languages	Java (JDK 8–21), Python, JavaScript, TypeScript, PL/SQL, SQL, HTML5, CSS3, C/C++, Shell Scripting
Java Technologies	Core Java, J2EE, Spring, Hibernate, JPA, JDBC, JSP, Servlets, JMS, EJB, Web Services (RESTful & SOAP), JSON, RMI, JavaBeans, Multithreading, Lambda Expressions, Streams, Quartz Scheduler, Design Patterns (Singleton, Factory, DAO, Business Delegate)
Front-End Technologies	HTML5, CSS3, JavaScript, TypeScript, Angular (2–17), React.js, Node.js, Express.js, jQuery, AJAX, JSON, XML, JSTL, DHTML, Bootstrap, Webpack, Protractor

Cloud & DevOps	AWS, Azure, Docker, Kubernetes, Jenkins, TeamCity, Maven, Gradle, ANT, Git, Bitbucket, GitLab, GitHub, Jira, Confluence, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana)
Web/Application Servers	Apache Tomcat, JBoss, IBM WebSphere, WebLogic, GlassFish
Databases	Oracle (8i–11g), MySQL, PostgreSQL, SQL Server, TOAD, HQL
NoSQL Databases	MongoDB, Cassandra
Big Data	Hadoop, Hive, Impala
IDE's & Tools	IntelliJ IDEA, Eclipse, Spring Tool Suite (STS), Visual Studio Code, NetBeans, IBM RAD, Postman, Swagger, Putty
Version Control	Git, SVN, CVS, Bitbucket, Rational ClearCase
Testing & Automation	JUnit, Mockito, TestNG, Jasmine, Karma, Selenium WebDriver, Selenium Grid, Cucumber, TDD
Frameworks & Other Tools	Struts, NGRX, Apache Camel, MuleSoft ESB, IBM WebSphere ESB, Log4j, JFreeChart
XML Technologies	XML, XSLT, SAX, DOM, XPath, WSDL, SOAP

Professional Experience

Client: Comcast, Philadelphia, PA

August 2023 - Present

Role: Java Full Stack Developer

Responsibilities

- Developed a responsive UI using **HTML5, CSS3, JavaScript, jQuery, Bootstrap**, and **SPA** frameworks like **Angular 4, TypeScript, Angular-CLI, NGRX, Bootstrap**, and **Webpack** for improved user interactivity and performance.
- Implemented module-wide routing with **Angular Router** and built complex reactive and template-driven forms with advanced validation and error handling.
- Designed and developed reusable **Angular Components, Services, and Filters**, ensuring maintainable front-end architecture and performing **unit/integration testing** using **Jasmine, Karma, and Webpack**.
- Integrated and consumed **RESTful** services using **Angular HTTP**, performing **CRUD** operations and handling asynchronous data updates efficiently.
- Integrated **Apache Kafka, IBM MQ, and JMS** for asynchronous event-driven communication between distributed microservices.
- Developed and deployed **RESTful microservices** using **Spring Boot, Spring Framework, Spring Cloud, Spring Batch**, and **Spring Integration**, following Microservices architecture.
- Implemented **JPA and Hibernate ORM/OGM** for seamless persistence with **MongoDB, Oracle, PostgreSQL**, and **DB2** databases, optimizing queries for large-scale datasets.
- Developed **PL/SQL** stored procedures, triggers, and functions for backend data manipulation and transactional integrity.
- Implemented caching strategies using **Spring Cache** and **Redis** to enhance application performance and reduce latency across distributed environments.
- Consumed **SOAP-based** web services for backward compatibility with legacy systems and ensured future scalability using **REST-first** design principles.
- Integrated **GraphQL APIs** within the microservices ecosystem to enable selective data fetching for React-based customer dashboards, improving API efficiency and load times.
- Developed **GraphQL resolvers and schema stitching** in Spring Boot to consolidate data from multiple REST endpoints, ensuring seamless communication between backend services.
- Integrated **OAuth 2.0 and JWT-based authentication** within **Spring Security** for secure user access management across microservices.
- Configured **NGINX** and **API Gateway** for load balancing, reverse proxying, and routing microservice requests efficiently.
- Implemented **Flyway** and **Liquibase** for automated database migrations across **Oracle, PostgreSQL**, and **MongoDB** environments.
- Utilized **OpenTelemetry** and **Prometheus/Grafana** for distributed tracing, metrics collection, and real-time performance visualization.

- Performed **code refactoring and optimization** using modern Java 17 features such as records, sealed classes, and switch expressions to enhance code maintainability.
- Established **Git branching strategies (GitFlow)** and automated pull request workflows integrated with **Bitbucket Pipelines** and **Jenkins CI/CD**.
- Enhanced application reliability through **Chaos Engineering** experiments using **Gremlin**, validating system resilience under simulated failures.
- Developed **JSP** and **Servlet-based components** to support legacy modules within the Comcast application ecosystem.
- Designed and implemented API documentation using **Swagger/OpenAPI** for REST service discoverability and testing.
- Employed **Test-Driven Development (TDD)** practices and developed comprehensive unit tests with **JUnit**, **Mockito**, and Spring Testing framework to ensure code reliability.
- Implemented advanced validation and exception handling for **REST APIs**; utilized **Postman** and **Swagger UI** for end-to-end API testing.
- Automated build and deployment using **Maven**, integrated **SonarQube** for continuous code quality checks, and set up CI/CD pipelines with **Jenkins** for consistent releases.
- Leveraged **Docker** for containerization and utilized **AWS CloudFormation**, **Terraform**, and **Kubernetes (EKS)** for automated infrastructure provisioning and container orchestration.
- Deployed and managed microservices on **AWS ECS**, **EC2**, and **RDS**; implemented serverless functions using **AWS Lambda** for event-driven workloads.
- Monitored and optimized performance using **AWS CloudWatch**, **ELK Stack**, and custom health checks for proactive issue detection.
- Utilized **Azure App Services** and **GCP Compute Engine** for multi-cloud deployment testing and hybrid environment integration.
- Developed **Python-based automation scripts** to support log analysis, batch processing, and integration workflows.
- Implemented application logging using **Log4j API**, ensuring structured log management and traceability across microservices.
- Managed source control with **Git** and **Bitbucket**, participated in code reviews, and ensured adherence to coding standards.
- Worked closely with cross-functional teams in **Scrum/Agile** methodology, actively participating in sprint planning, daily stand-ups, and retrospectives.
- Contributed to **performance tuning**, **scalability improvement**, and **cloud cost optimization** strategies across multi-cloud infrastructure.
- Designed and developed a **custom Node.js server** to handle client-side routing and cross-platform API aggregation for mobile and web applications.
- Built and deployed Java-based microservices on **WebSphere Application Server**, ensuring enterprise-level scalability and integration compliance.
- Conducted data-driven testing, cross-browser testing, and parallel execution using **Selenium WebDriver** and **Selenium Grid** for consistent quality across platforms.
- Used **Eclipse** and **IntelliJ IDEA** as primary **IDEs**, ensuring efficient debugging, profiling, and project management throughout the SDLC.

Environment: Java 17, Spring Boot, Spring Security, ReactJS, Redux, HTML5, CSS3, Azure App Services, Azure SQL, Cosmos DB, Azure DevOps, Kubernetes, Docker, Kafka, JUnit, Mockito, Jest, Application Insights, Git, Jira.

Client: WGU, Salt Lake City, UT

February 2023 – August 2023

Role: Java Full Stack Developer

Responsibilities:

- Developed and enhanced **microservices architecture** using **Spring Boot**, **Spring Cloud**, and **Spring Framework**, exposing REST APIs for integration with **ReactJS-based front-end** modules.
- Migrated **Angular** components to **ReactJS**, improving reusability, performance, and centralized state management with **Redux** and **Thunk middleware**.
- Applied **Spring Batch** and **Spring Integration** for scheduled data ingestion, validation, and transformation workflows, ensuring reliable data consistency.
- Built secure and modular **data pipelines** leveraging **Azure Data Factory (ADF)** and **Azure Functions** for ingesting large datasets from distributed systems.
- Integrated **Cosmos DB**, **Azure SQL**, **PostgreSQL**, and **Oracle** backends with Spring Data JPA and Hibernate ORM to achieve unified data access and optimized query performance.

- Developed and maintained **data classification** and **data quality modules**, enforcing metadata-driven governance and compliance with institutional data policies.
- Built **GraphQL interfaces** for educational data services, allowing dynamic queries from ReactJS components and reducing redundant API calls across student data workflows.
- Implemented **GraphQL federation** with Spring Boot microservices to unify disparate APIs from Azure-based systems, simplifying data access and improving maintainability.
- Implemented **Spring AOP** and interceptor patterns for cross-cutting concerns such as logging, transaction auditing, and global exception handling.
- Integrated **RabbitMQ**, **Kafka**, and **IBM MQ** for asynchronous message processing and real-time analytics ingestion pipelines.
- Performed **database-level optimizations** using **PL/SQL**, **stored procedures**, and **connection pooling** to handle high-volume academic records efficiently.
- Documented and versioned REST APIs with **Swagger/OpenAPI**, ensuring cross-team collaboration and API discoverability across microservices.
- Employed **Test-Driven Development (TDD)** using **JUnit**, **Mockito**, and **Postman** for automated integration and regression testing.
- Automated deployments and environment provisioning via **Terraform**, **Azure DevOps pipelines**, and **Kubernetes** for container orchestration.
- Utilized **Docker** for containerized builds and **Jenkins** for CI/CD automation, integrating **SonarQube** for code quality and security compliance checks.
- Monitored system performance and logs through **Azure Application Insights**, **ELK Stack**, and **Prometheus/Grafana** dashboards.
- Implemented **OAuth 2.0** and **JWT-based authentication** with **Spring Security**, ensuring secure access across distributed microservices.
- Developed **Python-based data parsing utilities** and shell scripts for batch data migration, file handling, and log automation.
- Optimized backend performance using **Java 17** features, multithreading, parallel streams, and caching with **Redis**.
- Deployed containerized microservices to **AWS ECS** and **Azure Kubernetes Service (AKS)** to support hybrid cloud environments.
- Followed **Agile/Scrum** methodology, participating in sprint planning, code reviews, retrospectives, and backlog grooming sessions to ensure timely delivery.
- Used **Git**, **Bitbucket**, **Jira**, and **Confluence** for source control, tracking, and collaborative documentation throughout the SDLC.

Environment: Java 8, Core Java, ReactJS, HTML5, CSS3, TeamCity, Maven, Azure DevOps, Azure Data Factory, Cosmos DB, Azure SQL, Spring Batch, Spring MVC, Hadoop, JSON, Jackson, TeamCity, TOAD, JavaScript, NodeJS, jQuery 1.8, log4j, JUnit, GIT, IntelliJ

Client: IBM, Bangalore, India

October 2021- June 2022

Role: Java Developer

Responsibilities:

- Developed and maintained enterprise-grade applications using **Spring Boot**, **Spring MVC**, and **Spring Core**, ensuring modular design and seamless integration with front-end ReactJS components.
- Built **RESTful APIs** using **Spring Boot** and **Spring Data JPA**, enabling real-time interaction with multiple data sources, including **Azure SQL Database**, **Cosmos DB**, and legacy on-prem systems.
- Implemented **dependency injection** and **aspect-oriented programming (AOP)** in Spring for efficient bean management, transaction handling, and cross-cutting concerns such as logging and auditing.
- Secured the application with **Spring Security** and **OAuth2**, implementing role-based access control (RBAC) and integrating authentication with **Azure Active Directory (AAD)**.
- Designed and implemented **data classification and governance modules**, supporting business requirements related to data quality, duplication, retention, and metadata tagging.
- Utilized **Hibernate ORM** for object-relational mapping and query optimization, leveraging second-level caching with **Ehcache** and native SQL for high-performance data access.
- Created reusable ReactJS components, hooks, and context-based state management for dynamic UI rendering and seamless integration with Spring Boot REST APIs.
- Leveraged **Kafka** for asynchronous data streaming and event-driven communication between microservices, ensuring consistent and fault-tolerant message delivery.
- Integrated **Azure App Services** and **Azure Kubernetes Service (AKS)** for containerized microservice deployments, enhancing scalability and operational resilience.
- Built **CI/CD pipelines using Azure DevOps** to automate build, test, and deployment stages, improving release frequency and reducing manual intervention.
- Developed **GraphQL endpoints** in a hybrid microservices environment to support analytics dashboards, enhancing query flexibility and API response optimization.

- Collaborated with UI/UX teams to design **GraphQL queries and mutations** that streamlined real-time updates in enterprise-level monitoring tools.
- Managed **Docker** container images and configurations, automating environment provisioning for development, staging, and production.
- Conducted extensive **unit and integration testing** using **JUnit**, **Mockito**, and **Postman**, ensuring compliance with TDD principles and achieving over 90% code coverage.
- Configured application monitoring using **Azure Monitor**, **Log Analytics**, and custom metrics to track performance, uptime, and error rates.
- Implemented **data visualization and reporting features** using **JFreeChart**, presenting KPIs and performance insights for internal dashboards.
- Ensured responsive UI development and accessibility compliance by utilizing **ReactJS**, **Bootstrap**, and **Material UI**, delivering a consistent user experience across devices.

Environment: Java 1.8, Spring MVC, Spring 4.0.7, Spring AOP 4.0.x, Hibernate, JDBC, MySQL, RESTful Web Service, AWS, MongoDB, RabbitMQ, Jasper Reports, XML, Eclipse 4.4/4.5, SQL, HQL, HTML5, CSS3, jQuery Ajax, Angular 2, Bootstrap 3.0, JUnit 4.11, Git, JIRA.

Client: Bank Of America, Hyderabad, India

June 2019 – September 2021

Role: Java Developer

Responsibilities:

- Participated in daily **Agile** stand-ups, sprint planning, and retrospectives to deliver enterprise banking solutions in a fast-paced development cycle.
- Developed and maintained core backend services using **Java 1.8**, **Spring Boot**, and **Spring MVC**, ensuring high performance and scalability.
- Designed and implemented **RESTful APIs** for seamless integration across multiple microservices and external systems; validated endpoints using **Postman**.
- Built interactive and responsive front-end components using **ReactJS**, **JavaScript**, **HTML5**, and **CSS3**, improving user experience for internal banking tools.
- Integrated **MongoDB** and **Oracle 11g** databases for both structured and semi-structured data storage; optimized queries for performance tuning.
- Configured and managed **Jenkins** pipelines to automate builds, run unit tests with **JUnit** and **Mockito**, and deploy applications across environments.
- Deployed applications on **Azure Virtual Machines** and **Azure App Services** and configured user access via **IAM** roles.
- Used **Git** and **Bitbucket** for version control, managing feature branches and pull requests in collaboration with the development team.
- Implemented **Spring Security** for authentication and authorization to protect internal banking applications.
- Worked with **Kafka** for asynchronous event-driven communication between microservices, ensuring reliable message delivery.
- Used **Jira** for task tracking, sprint management, and collaboration within **Agile** teams.
- Monitored application logs and performance using **Application Insights** and **Azure DevOps dashboards** to ensure system stability.

Environment: Java 1.8, Spring Boot, Spring MVC, Hibernate, REST APIs, ReactJS, MongoDB, Oracle 11g, HTML5, CSS3, JavaScript, Jenkins, JUnit, Mockito, Git, Bitbucket, AWS (EC2, S3, IAM, CloudWatch), Postman, Jira, Confluence, Linux
