

David Nguyen

Senior Full Stack Engineer

☎ (+1) 475-343-3437 | ✉ loi.david0324@gmail.com | Manor, TX

Professional Summary

- Results-driven **Senior Software Engineer** with **7+ years of experience** in full-stack development, API integrations, and developer platform enhancements.
- Technical expert specializing in **Java ecosystems (Spring, Spring Boot)** with extensive knowledge of **modern JavaScript frameworks**, **cloud infrastructure (AWS, Azure)**, and **microservices architecture**.
- Proven track record at **Asana** and **PagerDuty** of delivering scalable solutions that improve developer productivity and system performance.
- Demonstrated success in **architecting robust APIs**, **optimizing integration workflows**, and **reducing development cycles** through effective tooling and automation.
- Collaborative team member skilled in working across engineering, product, and stakeholder groups to translate complex requirements into efficient technical implementations.
- Passionate about **developer experience**, **CI/CD excellence**, and **cloud-native technologies** that drive innovation and operational reliability.

Technical Skills

- **Languages & Frameworks:** Java, Spring Boot, Spring, TypeScript, JavaScript, React, Node.js, Golang, Ruby on Rails
- **Data & Infrastructure:** PostgreSQL, Redis, AWS (Lambda, S3, EC2, SQS), Azure Functions
- **DevOps & Tools:** Docker, Kubernetes, GitHub Actions, Jenkins, Git, CI/CD pipelines
- **Architecture & Integration:** Microservices, REST APIs, GraphQL, Event-driven architecture, Third-party integrations, Webhooks
- **Other Technologies:** RabbitMQ, Kafka, Celery, Elasticsearch, Prometheus, Grafana, Agile methodologies

Professional Experience

Asana - Senior Software Engineer (Jun 2022 - Present), San Francisco, CA

Participated in the development of an internal **Java SDK** to streamline **third-party integrations** (Slack, Microsoft Teams, Google Drive) and built an **Integration Documentation CMS** to enhance cross-functional collaboration In **Asana Product** (<https://asana.com/>).

- Architected and developed an internal **Java SDK** leveraging **Spring Boot** to standardize third-party API integrations while reducing integration development time by 40%.
- Implemented **AWS Lambda** functions to handle **event-driven processes** across multiple integration points, enabling asynchronous workflows between Asana and partner platforms.
- Designed and optimized a **PostgreSQL** database schema to efficiently store integration configurations and user preferences with proper indexing for sub-millisecond query performance.
- Engineered a comprehensive documentation **CMS** using **Spring Boot** and **React** with a **TypeScript** codebase that automated the generation of **OpenAPI** specifications from integration code.
- Established **CI/CD pipelines** using **GitHub Actions** and **Docker** containers to ensure consistent testing and deployment across development, staging, and production environments.
- Integrated **microservices architecture** principles to develop scalable integration components that handle millions of daily requests between Asana and services like Slack, Microsoft Teams, and Google Drive.

Tech Stack: Java, Spring Boot, Golang, PostgreSQL, AWS (AWS Lambda), Docker, Kubernetes, Github Actions, React, Typescript, Microservices, Event-driven architecture, Third-party integrations

PagerDuty - Software Engineer (Sep 2018 - May 2022), San Francisco, CA

Focused on developing and maintaining **webhook integration systems** and **distributed workflows** to improve incident management and alert processing efficiency in **PagerDuty product** (<https://pagerduty.com/>).

- Contributed to **webhook integration systems** for seamless communication between Pagerduty's platform and third-party applications.
- Implemented components of **distributed workflows** using **Java** and **Spring Boot** to handle high-volume alert processing with improved reliability.
- Assisted in developing **data processing pipelines** that efficiently transformed and routed critical incident information across the platform's **microservices architecture**.
- Built and maintained **automation tools** that reduced manual configuration steps for enterprise customers, significantly improving onboarding experience.
- Collaborated with team members to implement **fault-tolerant systems** with comprehensive error handling for mission-critical notification services.
- Optimized database queries and implemented **caching strategies** that improved API response times for webhook-triggered events in high-traffic scenarios.

Tech Stack: Java, Spring Boot, Ruby on Rails, PostgreSQL, Redis, AWS (Lambda, S3, EC2, SQS), GraphQL, Celery, RabbitMQ, Kafka, Elasticsearch, Prometheus, Grafana, CI/CD (Jenkins), Git, Jira

Microsoft - Software Engineer Intern (May 2018 - Aug 2018), Redmond, WA

- Contributed to **Microsoft Todo App**, implementing new features and fixing bugs to enhance user experience.
- Engineered **Azure Functions** to automate deployment workflows, resulting in a 20% improvement in **CI/CD pipeline** efficiency.
- Collaborated with senior engineers in an **Agile environment**, participating in code reviews and sprint planning.

Education

Georgia Institute of Technology (Dec 2017)

Master's Degree in **Computer Science**
