LinkedIn: [linkedin.com/in/jaya-ranga-reddy-velidandla](https://www.linkedin.com/in/jaya-ranga-reddy-velidandla)

Professional Summary:

- Over 13+ years of experience in the IT industry with a strong background in Analyzing, Developing, Testing, Supporting and Implementing Data Warehouse applications and BI applications in various domains such as Banking, Automotive, and Manufacturing, Government sector and Insurance using Informatica PowerCenter, Informatica Intelligent Cloud Services (IICS)/IDMC, and Informatica Data Quality (IDQ), Snowflake and BIAPPS.
- Extensive experience in Informatica Power Center 10.x/9.x/8.x and Informatica Data Quality (IDQ), IICS (Informatica Intelligent Cloud Services) with strong business understanding and knowledge of ETL from heterogeneous source systems like Flat files, Excel, XML, Oracle, SQL server, DB2, Snowflake and Teradata.
- Experience with Snowflake Data warehouse, deep understanding of Snowflake architecture and processing Experience with performance tuning of Snowflake data warehouse with Query Profiler, Caching and Virtual data warehouse scaling.
- Experience on Installation, Configuration on Oracle BI application (OBIEE/DAC/ Informatica).
- Used COPY/INSERT, PUT, GET commands for loading data into Snowflake tables from internal/external stage.
- Worked with processes to transfer/migrate data from AWS S3/Relational database and flat files common staging tables in various formats to meaningful data into Snowflake.
- Experience in CLOUD data migration using AWS, ADF,GIT, Jenkins, Airflow and Snowflake.
- Worked on TASK creation for scheduling/Automate Snowflake jobs.
- Hands-on experience in bulk loading and unloading data into Snowflake tables using COPY command.
- experience as ETL Onsite lead and worked Closely with client for requirement handling and delivering Datawarehouse project.
- Worked on all phases of Datawarehouse development lifecycle from analyzing requirements, development and implementation and supported new and existing applications.
- Experienced in using SQL for data analysis and data profiling. Well versed in writing SQL queries and performing end to end validations.
- Experience in uploading data into AWS-S3 bucket using informatica amazonS3 plugin
- Implement incremental loading strategies using DBT's full-refresh and timestamp options to efficiently update data models.
- Experience in Slowly Changing Dimensions (Type 1, Type 2 and Type 3).
- Familiarity with multiple scheduling tools such as Control-M, AutoSys, DAC and Informatica Scheduler, ensuring streamlined job executions across environments.
- Ability to work in Agile (Scrum and Kanban) as well as standard waterfall SDLC project environments with cross functional collaboration amongst business and IT teams.
- Version Control: Utilize DBT's native version control integration (e.g., Git) to manage changes and collaborate on data models.
- Data Lineage: Document and visualize data lineage using DBT's lineage feature to track data transformations and ensure data quality.
- Involved in Data profiling and analysis for identifying data quality issues.
- Expertise in moving On-Premises data to Cloud (AWS S3, MS Azure, Google Cloud Platform).
- Extensive experience with Shell Scripting in the UNIX Environment. Used UNIX scripting and Scheduled PMCMD to interact with Informatica Server.

- Experience working with Key Range Partitioning in IICS, handling File loads with concept of File list option, creating fixed with file format and more, file listener and more and hands-on expertise with Cloud, including Informatica IICS
- Proficient in creating and handling JSON files within the IICS CAI environment, leveraging service connectors, app connectors, and process objects.
- Extensively used cloud transformations - Aggregator, Expression, Filter, Joiner, Lookup (connected and unconnected), Rank, Router, Sequence Generator, Sorter, Update Strategy, Union Transformations
- Troubleshooting and problem-solving applications with Informatica Debugger and performed code migration from Dev to Test.
- Proficient in utilizing parameter files for seamless environment configurations across development, QA, and production environments.
- Experience in handling initial/full and incremental loads.
- Good exposure in Snowflake Cloud Architecture and Snow SQL and SNOWPIPE for continuous data loading
- Experience in migrating informatica jobs to higher versions as well as to other ETL tools like Informatica cloud.
- Experience in support and knowledge transfer to the production t
- Experienced in data visualization by using OBIEE/OAS, power bi to create graphs, charts and dashboards.
- Created interactive dashboards with drill-down capabilities, visualizations, and dynamic filters and prompts, enhancing user experience and enabling self-service analytics.
- Expertise in writing large/complex queries using SQL. performance tuning of Oracle using SQL plan, SQL hints, Oracle partitioning, various indexes and join types.
- Collaborative work with QA teams, including test case creation, test result documentation, and defect tracking.
- Expertise in Performance Tuning of sources, targets, transformations and sessions and Query Optimization.
- Configuring and setting up DAC (Data Warehouse Administration Console).
- Ability to work independently and as a team with a sense of responsibility, dedication, commitment and with an urge to learn new technologies.

Technical Skills:

ETL/Streaming:	Informatica PowerCenter 10.5.1/10.2.1/9.6.1/9.5.1, IDQ 8.6/9.1
Cloud Platforms:	IDMC/IICS, CDI, CAI, Snowflake Cloud Computing, AWS, Azure,
Data Modelling Tools:	Star-Schema Modelling, Erwin Data Modeler, TOAD Data Modeler, Snowflake Data warehouse
Databases:	Oracle 12c/11i/10g, TERADATA, DB2, SQL Server, Snowflake
Database Tools:	SQL Developer, TOAD, Teradata SQL Assistant, DB vera
Operating Systems	UNIX/ LINUX, Windows
Programming Languages:	SQL, PL/SQL, HTML, UNIX Scripting, Python
Operating System:	Linux 6.0, Windows 98/NT/2000/XP
Scheduling Tools:	Control-M, AutoSys, DAC, Informatica scheduler
Ticketing Tools:	JIRA
BI /Virtualization:	OBIA 7.9.6.4, OBIEE, OAS, Power BI, Excel, Tableau
Methodologies	Agile, waterfall, Offshore- Onshore model

Education:

- M Tech from Bharath University In first division.
- B Tech from Jawaharlal Nehru technological University In first division.

Experience Summary:

Client: Bank of The West, Tempe, AZ

Feb 2024 – Current

Role: Snowflake Cloud & ETL Lead

Responsibilities:

- Implemented and configured Informatica Intelligent Cloud Services (IICS) to integrate cloud-based applications and data sources with on-premises systems.
- Configured and maintained connectivity between IICS and different cloud applications and platforms such as snowflake, Amazon S3, and Microsoft Azure.
- Created ETL mapping document and ETL design templates for the development team to make sure data analysis, data quality, operational management, monitoring, and technical trouble shooting.
- Responsible for migrating the folders, mappings, and sessions from development to test environment and Created Migration Documents to move the code from one Environment to another Environment.
- Extracting and uploading data into AWS S3 buckets using Informatica aws plugin.
- Developed data integration tasks and mappings within IICS for seamless data movement between various cloud and on-premises environments.
- Modifying existing Informatica mappings to load to Snowflake DB.
- Recreating existing Oracle/Sql Server objects in Snowflake DB.
- Developing the synchronization, data replication, data mask task to transfer the data to down stream system
- Created external tables on top of S3 data which can be queried using AWS services like Athena.
- Converting Informatica mapping logic to Snow SQL queries.
- Created Snow pipe for continuous data load.
- Bulk loading and unloading data into Snowflake tables using COPY command.
- Validate the data feed from the source systems to Snowflake DW cloud platform.
- Integrated and automated data workloads to Snowflake Warehouse.
- Uploading data from Oracle Exadata database into snowflake db cloud env using Informatica snowflake plugin
- Organize daily technical discussions with the Onsite team also including the individual offshore work stream leads and set expectations for offshore delivery.
- Providing UAT support and Deployment support.
- Worked in a Scrum Agile process with two-week iterations delivering new Snowflake objects and migrating data at each iteration.
- Providing development and testing status to Client and other project stakeholders on regular basis.
- Ensure ETL/ELTs succeeded and loaded data successfully in Snowflake DB.
- Created Test cases for Unit Test, System Integration Test and UAT to check the data.
- Used Partitions in Sessions to improve the performance of the database load time.
- Creating data quality mappings to define how data should be transformed and cleaned based on business rules and data quality standards.
- Utilizing Informatica IDQ features to implement data quality processes, including data profiling, cleansing, matching, and validation rules.

Environment: IDMC/IICS, Informatica Data Quality 10.x, Oracle, SQL Server, Snowflake, Autosys, Version One, Git, AWS, Airflow, PL/SQL, Python, Jenkins, Informatica Data Quality. Data Governance, Jira, Scrum, Kanban,

Informatica PowerCenter 10.5.x, PowerShell, Informatica Developer Client 10x, Auto Load system, S3-files, snow pipe, control-M, could Watch.

Client: American Family Insurance, Ohio

Dec 2022 - Jan 2024

Role: Snowflake/CDI Developer

Responsibilities:

- Worked with the IT architect, Program managers in requirements gathering, analysis, and project coordination.
- Integrate data from a variety of sources into an enterprise data warehouse, including SQL Server, Oracle, Informix, flat files, Excel, and XML files,
- Create mappings, workflows, rules, maplets using various transformations such as Global Address Verification, Data Masking, Normalizer, Aggregator, expression, Update Strategy, Web service consumer, REST, Python, SQL, Standardizer, Look up.
- Installed and configured Windows Secure Agent register with IICS org.
- Created IICS connections using various cloud connectors in IICS administrator
- Design and implement database schemas, including Star Schema, Snowflake Schema.
- Utilize Time Travel to recover data and query historical data.
- Implement Time Travel for data recovery and auditing purposes
- Create and manage tables, views, and relationships based on schema design.
- Set up and manage Snow pipe for continuous, automated data ingestion from cloud storage (e.g., S3).
- Monitor Snow pipe for performance and error handling.
- Extracted data from Snowflake to push the data into Amazon warehouse instance to support reporting requirements
- Ensure data quality during the ingestion process.
- Develop ETL pipelines for transforming raw data into structured formats using Snowflake's SQL and external tools.
- Optimize ETL processes for performance and cost-efficiency.
- Use zero-copy cloning to create clones of databases, schemas, or tables without additional storage costs.
- Optimize queries and manage query execution plans.
- Monitor and manage virtual warehouses to balance performance and cost.
- Responsible for Business Analysis and Requirements Collection and involved in Designing Technical Specification
- Perform business and data analysis based on the functional specifications provided by the business users and managers
- Implement and maintain multiple ETL process to synchronize data between different source system and database.
- Document, test, implement and provide ongoing support for Oracle and ETL applications.
- Created Common objects for the ETL team to maintain the Common Code and Documented standards for Informatica code development
- Created Informatica mappings using the transformations like Source Qualifier, Aggregator, Expression, Lookup, Router, Filter, Update Strategy and Joiner transformations
- Created Common objects for the ETL team to maintain the Common Code and Documented standards for Informatica code development
- Involved in Creating, Validating, Testing, and running the sequential and concurrent Batches and Sessions
- Created Deployment groups and worked closely with DBAs to migrated Informatica code /database

tables from Dev to QA and QA to Production.

Environment: IDMC/IICS, Informatica Data Quality 10.x, Oracle Exadata, SQL Server, Snowflake, Autosys, Salesforce, Sql Developer, Git, AWS S3, Airflow, PL/SQL, Python, Jenkins, Service Now. Git and GitHub, Informatica PowerCenter 10.5.x, PowerShell, Cron tab, Auto sys, Informatica Developer Client 10x, Amazon Lambda, CloudWatch, flat files, Excel, and XML files, snow pipe

Client: Chobham Mission Equipment, davenport, Florida

Jan 2022 –Nov 2022

Role: Technical Lead

Responsibilities:

- Responsible for Business Analysis and Requirements Collection and involved in Designing Technical Specification.
- Migration of the PC code to IICS platform.
- Implemented CDC using IICS, migrated and developed utility from PC to IICS.
- Identifying the optimized Informatica method of developing all the new interfaces.
- Analyzed existing ETL Datawarehouse process and ERP/NON-ERP Applications interfaces and created design specification based on new target Cloud Datawarehouse and Data Lake Store
- Convert PowerCenter mappings to IICS mappings, ensuring accurate data transformations and logic.
- Designed Redshift purging framework for Redshift.
- Created automation for identify the rejected record report using UNIX.
- Understand the requirements and prepare the documents with the listing of various targets from a single source
- Data compatibility issues: Differences in data formats and structures between on-premises and cloud environments.
- Identify and address data discrepancies between PowerCenter and IICS environments.
- Ensuring proper network access and bandwidth for data transfer between on-premises and cloud systems.
- Generated Ad hoc reports using multiple heterogeneous sources which included Siebel and EBS.
- Created Unit test plans and performed the unit testing of the reports developed
- Generated Ad hoc reports using OBI Answers by applying filters and prompts, configured the reports in different views, and created complex reports using action links and hierarchies.
- Performed data manipulations using various Informatica Transformations like Filter, Expression, Lookup (Connected and Un-Connected), Aggregate, Update Strategy, Normalizer, Joiner, Router, Sorter and Union.
- Maintained all level of securities & Monitor performance of the overall system.
- Handled all application-related issues which occur and provided root cause analysis
- Involved in Unit Testing and Resolution of various Bottlenecks came across.
- Test solutions to validate whether requirements are met and develop test plans, test scripts, and test conditions based on the business and system requirements.
- Developed several reusable transformations and mapplets that were used in other mappings.
- Created/Build UNIX shell scripts to pull data from vendors and dropped into Informatica environment using FTP process.

Environment: OBIA 7.9.6.4, Oracle EBS, Siebel CRM, IDMC/IICS, Informatica Power Center, Oracle, SQL Server, Snowflake, Autosys, Sql Developer, AWS Redshift, Jira. Git and GitHub, PowerShell, Cron tab, flat files, Excel, and XML files.

Client: Riyadh Bank, RIYADH.

Jan 2021 – Dec 2021

Role: Technical Lead

Responsibilities:

- Extracting data from various source system flat files and load into GL staging area.
- Created mapping documents with detailed source to target transformation logic, Source data column information and target data column information.
- Created ETL and Datawarehouse standards documents- Naming Standards, ETL methodologies and strategies, Standard input file formats, data cleansing and pre-processing strategies
- Developed mappings/sessions using Informatica Power Centre 10.2.0 for data loading.
- Extensively used cloud transformations – Aggregator, Expression, Filter, Joiner, Lookup (connected and unconnected), Rank, Router, Sequence Generator, Sorter, Update Strategy, Union Transformations
- Designed, Developed, and Implemented ETL processes using IICS Data integration
- Created IICS connections using various ODBC connectors in IICS administrator.
- Extensively used Push Down Optimization option to optimize data loading processing.
- Involved in Development, Unit Testing, SIT and UAT phases of project
- Extensively used Parameters (Input and IN/OUT parameters), Expression Macros and Source Partitioning Partitions
- Communicated with business customers to discuss the issues and requirements.
- Developed mappings/sessions using Informatica Power Centre 10.2.0 for data loading.
- Developed Cloud integration parameterized mapping templates (DB, and table object parametrization) for Stage, Dimension (SCD Type1, SCD Type2, CDC and Incremental Load) and Fact load processes
- Developed Workflows using task developer, Worklet designer and workflow designer in Workflow manager and monitored the results using workflow monitor.

Environment: InformaticaV10.5.1, IICS, Oracle12c, OBIEE, OAS, UNIX, Flat Files, CSV Files, SQL Server.

Client: AL Rajhi Bank, RIYADH.

Jan 2019 – Dec 2020

Role: Informatica Production Support/Developer

Responsibilities:

- Developed ETL programs using Informatica to implement the business requirements.
- Communicated with business customers to discuss the issues and requirements.
- Developed mappings/sessions using Informatica Power Centre 10.2.0 for data loading.
- Developed Workflows using task developer, Worklet designer and workflow designer in Workflow manager and monitored the results using workflow monitor.
- Identify, compare, and resolve data quality problems.
- Evaluate large dataset for quality and accuracy.
- Determine business impact level for data quality issues.
- Work with Programmers to correct data quality errors.
- Data Profiling, quality rules definition and automation
- Data quality measurement and metric generation, and aggregation into quality performance indicators
- All aspects of data quality management including a full end to end data quality implementation
- Gathering data from primary or secondary data sources to identify and interpret trends.
- Running data queries to identify coding issues and data exceptions, as well as cleaning data.
- Collaborating with database developers to improve data collection and storage processes
- Performing statistical tests on large datasets to determine data quality and integrity

- Responsible for build of data mappings, sessions, and workflows to meet requirements.

Environment Informatica 10.2.1, Informatica IDQ, Oracle 12c, Teradata, Control-M, Shell Scripting.

Client: Ministry of Foreign Affairs, RIYADH.

Aug 2017 – Dec 2018

Role: Informatica/Report Developer

Responsibilities:

- Involved in requirement gathering, analysis, design and development of new dimensional model and enhancements to current models
- Worked in the enhancement and change requests for production issue or any newly added attributes.
- OBIEE integration with EBS and implement the security based on the ebs responsibility.
- Production Support on ongoing issues and troubleshoot the problems.
- Designed and implemented custom business intelligence solutions (Metadata and Dashboards/Reports) using the EBS/Oracle BI Analytics platform.
- Developed mappings/sessions using Informatica Power Centre 9.6.5 for data loading.
- executed the migration from OBIEE 11g to 12c.
- Designed/Modified metadata repository in 11g/12c using admin tool.
- Responsible for build of data mappings, sessions, and workflows to meet requirements.
- Identification and modification of mappings as per required change.
- Implements best practices and tunes SQL code for optimization.
- Performed Rpd Testing and validation before exposing BMM in the Presentation layer.
- Generated ad hoc reports using OBI Answers by applying filters and prompts, configured the reports in different views, and created complex reports using action links and hierarchies.
- Created and configuring users specific interactive Dashboards
- Implemented the security both at the repository level and at the presentation catalogue level.
- Created Unit test plans and performed the unit testing of the reports developed
- Created the technical documents like Impact analysis and technical design document.
- Performed data manipulations using various Informatica Transformations like Filter, Expression, Lookup (Connected and Un-Connected), Aggregate, Update Strategy, Normalizer, Joiner, Router, Sorter and Union.

Environment: OBIA 7.9.6.4, OBIEE 11g/12c, Informatica 9.6.2, DAC, Linux, Windows, Oracle 12c, Excel, SQL Server, Oracle Mobile Application, Power BI, Tableau. TeamCenter

Client: Madden, RIYADH.

Dec 2015 – Jul 2016

Role: Informatica/BI report Admin

Responsibilities:

- Migrating OBIEE from Windows server to Oracle Exalytics Server.
- Migrating Informatica and DAC from Windows server to HP Linux servers.
- Installation and configuration of OBIEE, Informatica and DAC.
- The below are the migration activities doing in Oracle Exalytics Server.
- Repository migration (OBIEE, Informatica and DAC)

- CatLog migration. Usage tracking conflagration, Application Role migration.
- Resolved migration errors.
- Conflagration files move from windows to Exalytics server.
- Unit testing. & Same migration activities implemented in CRP, UAT, PROD, DEV and DR instances.

Environment: OBIA 7.9.6.4, OBIEE 11g, Informatica 9.6.2 & DAC, Oracle Exadata, Sql Developer, Oracle Exalytics, Shell Scripting.

Client: Daimler, Chennai

June 2011 – Nov 2015

Role: BI Apps Developer

- Installed and configured BI Analytics package (OBIEE/OBIA/Informatica/DAC) in Linux environment.
- Developed, maintained, and supported activities for Oracle BI Analytics (Finance, Sales, Service and Marketing modules)
- Involved in customizing the Analytics repository for the new columns/tables added in ETL/Warehouse.
- Migrated OBIEE, Informatica and DAC from Dev to QA, QA to Prod and Prod to Prod Support.
- Supported and maintained OBIEE, Informatica and DAC for Disaster Recovery (DR) Environment.
- Configured OBIEE RPD and Catalog for Data level, Object Level, Position based and Row level security.
- Worked on user provisioning, implemented Position, Location, Organization based security for business users and dealers.
- Extensively created data models and used them in creating new reports using BI Publisher
- Developed ETL procedures to ensure conformity, compliance with minimal redundancy, translated business rules and functionality requirements into ETL procedures.
- Created new mappings, workflows using various transformations and maplets in Informatica.
- Modified Out of the Box (OOTB) ETL mappings and created complex mappings using various ETL transformations.
- Worked on Performance Tuning, identifying, and resolving performance bottlenecks in various levels like sources, targets, mappings, and sessions.
- Worked with different sources like Oracle, SQL Server, Flat files to load into Warehouse using Informatica cloud
- Extensively used Unix Shell Scripting to automation, daily application backup and DR synchronization.
- Performed OBIEE, Informatica, DAC upgrade from OBIA 7.9.6.2 package 7.9.6.3.
- Implemented the best practices in ETL Mapping, DAC repository and Analytics Repository.

Environment: OBIA 7.9.6.4, OBIEE 10g/11g, Informatica 9.6.2 & DAC, Oracle 11g, Sql Developer
