

Jenny Yonjan Tamang
jennylamaa15@gmail.com
(504) 492-6696

Executive Summary:

- Experienced Full-Stack Java Developer with almost 7 years of expertise in designing, developing, and deploying scalable, multi-tier distributed enterprise applications.
- Proficient in Backend Development with strong expertise in Java (Core & J2EE), Spring Boot, Spring Security, Hibernate, and Microservices architecture.
- Frontend Expertise with hands-on experience in React.js, Angular (10-12), JavaScript, TypeScript, HTML5, CSS3, Bootstrap, and jQuery for developing responsive and user-friendly UI/UX designs.
- Cloud Computing & DevOps experience in AWS and GCP, utilizing services like EC2, S3, IAM, CloudWatch, DynamoDB, CloudFormation, and ElasticCache. Strong hands-on experience with Docker, Kubernetes, OpenShift, Terraform, Jenkins, GitLab CI/CD, and GitHub Actions for containerization, orchestration, and automated deployments.
- Database Management expertise in Oracle, MySQL, PostgreSQL, MongoDB, DynamoDB, and Redis, including writing optimized queries and stored procedures.
- Microservices and API Development with deep knowledge of RESTful APIs, SOAP, OAuth2, JWT, API Gateway, Apache Kafka, and RabbitMQ for building scalable and high-performance applications.
- Software Development & Agile Practices experience with Agile (Scrum, Kanban), Test-Driven Development (TDD), and Behavior-Driven Development (BDD) methodologies.
- Security & Identity Management experience with LDAP, Active Directory, Okta, and implementing security best practices in application development.
- Logging, Monitoring, and Debugging utilizing Splunk, Dynatrace, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, and Grafana for proactive system monitoring and troubleshooting.
- Extensive Experience with Build & Deployment Tools such as Maven, Gradle, Jenkins, Git, GitHub, GitLab, SVN, ensuring seamless CI/CD pipelines and version control.
- Strong Problem-Solving & Performance Optimization Skills, including Java Performance Tuning, Multi-threading, Collections, RMI, Exception Handling, and Functional Programming in Java & Scala.
- Enterprise Application Development expertise with hands-on experience in JBoss EAP, Apache Tomcat, Oracle WebLogic, and WebSphere for application deployment and server management.
- Testing & Automation Experience with JUnit, Mockito, Selenium WebDriver, SOAP UI, ensuring high software quality and robust test coverage.
- Integration & Middleware Expertise in Apache Camel, MQ Series, JAX-WS (SOAP), JAX-RS (RESTful), Artemis, and LUNA Encryption Device.
- Effective Collaboration & Communication with experience working in cross-functional Agile teams, leveraging tools like JIRA, Confluence, and Slack for project management and team collaboration.
- Committed to Continuous Learning & Innovation, staying up to date with emerging technologies in Cloud, DevOps, Microservices, and Full-Stack Development.

Technical Skills:

- Languages: Java, TypeScript, JavaScript, SQL, PL/SQL, Unix Scripting, Python
- Frameworks & Libraries: Spring Boot, Spring Security, Hibernate, React.js, Angular, JSP, Servlets, Struts, JUnit, Mockito, spring Cloud, Spring Batch, Spring Data JPA, Quarkus, Apache Camel, Node.js
- Frontend Technologies: AngularJS, Angular 12, React.js, HTML5, CSS3, JavaScript, Bootstrap, jQuery, Tailwind CSS, Redux, RxJS
- Databases: Oracle, MySQL, MongoDB, PostgreSQL, DynamoDB, Redis, MS SQL Server, Cassandra, Couchbase, Neo4j (Graph DB)
- Cloud Platforms: AWS, GCP
- Containerization & Orchestration: Docker, Kubernetes, OpenShift, AWS EKS, GCP GKE
- DevOps & CI/CD Tools: Jenkins, GitLab, GitHub Actions, Terraform, Maven, Gradle, Nexus
- Monitoring & Debugging Tools: Splunk, Dynatrace, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, New Relic, AppDynamics, AWS CloudWatch
- API & Web Services: RESTful APIs, SOAP, Swagger, Postman, OAuth2, JWT, API Gateway, Apache Kafka, RabbitMQ, GraphQL, WebSockets
- Identity & Access Management: LDAP, Active Directory, Okta, OAuth 2.0, SAML, OpenID Connect
- Version Control: Git, GitHub, GitLab, SVN, Bitbucket
- Build & Deployment Tools: Jenkins, GitLab CI/CD, Docker, Kubernetes, OpenShift, Gradle Enterprise
- Other Tools: IntelliJ IDEA, Eclipse, Visual Studio Code, JIRA, Confluence, Postman, Slack
- Methodologies: Agile (Scrum, Kanban), Test-Driven Development (TDD), Behavior-Driven Development (BDD)

Professional Experience:

Project 1: Healthcare Data Analytics Platform

Client: Tenet Healthcare Corporation, Dallas, Texas

Duration: December 2022 - Present

Role: Full Stack Java Developer

Environment: Java 11/17, Spring Boot 2.3, GCP, MySQL, MongoDB, Angular 10/12, Microservices, OAuth2, JWT, Kafka, Kubernetes, GitLab, JIRA, Jenkins, Docker, Typescript, ELK Stack, Postman, REST APIs

- Designed and developed a secure and scalable patient data analytics platform using Java 11, Java 17, and Spring Boot 2.3, ensuring HIPAA compliance and real-time data processing.
- Refactored legacy monolithic applications into cloud-native microservices using Java 17, Spring Boot 3, and GCP Cloud Run, improving scalability and maintainability.
- Developed microservices for patient management, claims processing, and electronic health records (EHR) using Spring Boot and GCP Cloud Functions, ensuring seamless and secure interoperability.
- Implemented a real-time health monitoring system using Kafka and GCP Pub/Sub, allowing healthcare providers to track critical patient vitals remotely.
- Deployed healthcare microservices on GCP using Kubernetes (GKE) and Terraform, ensuring scalability, security, and high availability of medical applications.

- Designed and developed RESTful APIs for healthcare data exchange, enabling interoperability between hospitals, insurance providers, and government health agencies.
- Implemented OAuth2 and JWT-based authentication for role-based access control (RBAC), ensuring secure access to protected health information (PHI).
- Migrated legacy SOAP-based healthcare services to RESTful microservices using Spring Boot and GCP API Gateway, reducing API latency and maintenance overhead.
- Implemented object-oriented programming (OOP) principles in TypeScript, utilizing classes, inheritance, and modules to structure large-scale applications efficiently.
- Optimized database queries and indexing in MySQL and MongoDB, ensuring fast access to patient records and reducing query execution time.
- Implemented real-time medical claims processing using Kafka Streams, reducing manual intervention and accelerating claim approvals.
- Developed a real-time transaction dashboard using Angular 12 and ELK Stack, providing financial analysts with instant insights into customer activities.
- Developed a scalable appointment scheduling system using GCP Cloud Run and Spring Cloud Config, allowing dynamic configuration updates without downtime.
- Enhanced telemedicine capabilities by integrating WebRTC APIs, enabling secure video consultations between patients and doctors.
- Integrated Angular services with RESTful APIs, ensuring seamless data binding and efficient state management using RxJS and NgRx for real-time data updates.
- Developed strongly typed and scalable front-end applications using TypeScript, leveraging interfaces, generics, and decorators to enhance code maintainability and reusability.
- Optimized MuleSoft flows using DataWeave transformations, efficiently processing and mapping data between multiple systems, improving performance and maintainability.
- Containerized microservices using Docker, creating lightweight, portable, and scalable application environments for seamless development and deployment.
- Developed and executed unit tests using JUnit, ensuring comprehensive test coverage and maintaining application stability in Java-based microservices.
- Implemented test-driven development (TDD) with PyTest and unittest, ensuring robust unit and integration testing for Python applications.
- Deployed and managed enterprise applications on WebSphere and Apache Tomcat servers, ensuring high availability and optimized configuration for production workloads.
- Developed and optimized dynamic user interfaces using Angular 10 and Angular 12, implementing reusable components, lazy loading, and reactive forms for improved performance and scalability.
- Implemented secure data encryption for medical records at rest and in transit using GCP Cloud KMS, ensuring compliance with data protection regulations.
- Developed CI/CD pipelines using GitLab, Jenkins, and Terraform, automating deployments for healthcare applications and reducing release cycle time.
- Integrated GCP Cloud Logging and ELK Stack for real-time monitoring, providing insights into system performance and proactive troubleshooting.
- Designed a Kafka-based event-driven system for medical alerts, notifying doctors and emergency responders of critical patient conditions in real-time.
- Implemented caching strategies using GCP Memory store (Redis), reducing response times for patient search queries.
- Led an Agile development team, participating in sprint planning, backlog grooming, and retrospectives, ensuring timely delivery of healthcare system enhancements.
- Integrated HL7 FHIR APIs to ensure seamless healthcare data exchange between different hospitals and insurance providers, enhancing interoperability and compliance.

Project 2: Financial Management System

Client: Liberty Capital Bank, Addison, Texas

Duration: January 2020 – November 2022

Role: Senior Java Developer

Environment Java 8, Spring Boot, Spring Security, React, Hibernate, Microservices, AWS, Kafka, Docker, Kubernetes, Oracle, MongoDB, Redis, REST APIs, SOAP, Jenkins, GitLab, Terraform, JUnit, Mockito, ELK Stack, Prometheus, Grafana, Javascript, Agile

- Developed secure and scalable financial transaction processing services using Spring Boot and Java, reducing response time by optimizing multi-threading and database interactions.
- Designed microservices for account management, payments, and loan processing, leveraging Spring Cloud and AWS Lambda, ensuring high availability and fault tolerance.
- Implemented RESTful APIs for banking services, integrating with external payment gateways using Spring Boot, API Gateway, and OAuth2 for secure third-party access.
- Optimized loan approval workflows by implementing event-driven architecture, utilizing Apache Kafka for processing millions of transactions in real time.
- Built a user-friendly React-based dashboard for healthcare professionals, integrating Elasticsearch (ELK Stack) and Grafana for real-time patient insights and analytics.
- **Optimized Docker images and reduced build size**, leveraging multi-stage builds and caching mechanisms to improve application startup time and performance.
- Developed and integrated APIs using MuleSoft Anypoint Platform, enabling seamless connectivity between enterprise applications, databases, and third-party services.
- Integrated JUnit test cases with CI/CD pipelines, automating regression testing and improving software quality before deployment.
- Monitored and troubleshooted Tomcat server logs, optimizing thread pools, memory management, and security configurations to enhance application stability.
- Implemented asynchronous programming using Promises, Async/Await, and Fetch API, ensuring smooth API communication and efficient data fetching in front-end applications.
- Integrated Redux for global state management, optimizing data flow across components and improving application efficiency.
- Developed authentication and authorization layers using Spring Security and JWT, enforcing multi-factor authentication (MFA) and role-based access control (RBAC) for banking applications.
- Enhanced fraud detection mechanisms by integrating real-time monitoring with AWS CloudWatch and Prometheus, enabling proactive identification of suspicious transactions.
- Implemented batch processing using Spring Batch and AWS S3 for secure storage and retrieval of large financial reports, reducing manual processing time by 40%.
- Integrated Oracle and MongoDB databases for structured and unstructured financial data storage, improving reporting efficiency with Hibernate and SQL query optimization.
- Refactored legacy SOAP-based banking services into microservices using RESTful APIs with Spring Boot and AWS API Gateway, ensuring better scalability and maintainability.
- Designed and developed high-performance UI components using React and React Hooks (useState, useEffect, useContext), improving reusability and state management.
- Deployed and managed Kubernetes clusters on AWS EKS for orchestrating microservices, optimizing auto-scaling and load balancing for peak transaction loads.
- Implemented CI/CD pipelines using Jenkins, GitLab, and Terraform, automating deployment workflows for regulatory-compliant banking applications.

- Developed a Kafka-based messaging system for interbank transactions, ensuring reliable and asynchronous communication between distributed services.
- Optimized caching mechanisms using Redis and AWS ElastiCache, reducing database load and improving API response times for high-traffic banking services.
- Configured JBoss application servers for high-performance deployment of financial applications, ensuring compliance with banking security standards.
- Configured and managed Docker Compose and Docker Swarm, automating multi-container deployments and improving system reliability in distributed environments.
- Implemented Spring Actuator to externalize configuration properties, allowing seamless deployment across development, staging, and production environments.
- Collaborated with compliance and security teams to ensure financial applications met PCI-DSS and GDPR regulations, implementing encryption and tokenization for sensitive data.
- Conducted performance tuning and load testing using JMeter and AWS CloudWatch, ensuring resilience under high transaction volumes.
- Led an Agile development team, participating in sprint planning, code reviews, and continuous improvement initiatives, ensuring on-time delivery of banking solutions.

Project 3: FinTech Payment Gateway

Client: Remitly, Seattle, Washington

Duration: March 2018 – December 2019

Role: Java/JEE Developer

Environment: Windows, Java, J2EE, JDK, Spring Framework, Spring Boot, Microservices, Hibernate, RESTful Web Services, HTML, CSS, AJAX, JavaScript, AngularJS, JSON, XML, Agile Methodology, Eclipse IDE, JMS, JUnit, Maven, Git, Log4j, WebLogic, Mockito, Microsoft SQL Server, Selenium

- Actively participated in the complete Software Development Life Cycle (SDLC), encompassing analysis, design, development, integration, and testing phases.
- Designed and developed dynamic UI screens using AngularJS, HTML5, CSS3, JavaScript, JSON, and AJAX, ensuring an intuitive and responsive user experience.
- Built reusable AngularJS directives to create custom components, improving code maintainability and enhancing UI consistency across the application.
- Implemented client-side validation with AngularJS and integrated server-side validation using Expression Language, ensuring robust form handling and security.
- Worked extensively with XML technologies, including XML Parsers and JAXB, for data binding and seamless communication between client and server components.
- Developed B2B components using Spring MVC, Apache Camel, JMS, JAXB, JAX-RS, and Jersey, facilitating seamless business transactions and integrations.
- Optimized database interactions using Bulk Collections to enhance performance and minimize context switching between SQL and PL/SQL engines.
- Created and executed PL/SQL scripts to extract and manipulate data, utilizing the UTL_FILE package for efficient file handling in Oracle databases.
- Designed and implemented database objects such as tables, views, materialized views, stored procedures, and packages, using tools like Toad, PL/SQL Developer, and SQL*Plus.
- Developed microservices using Spring Boot, enabling seamless interaction between distributed services via RESTful APIs.

- Utilized Git for version control, ensuring seamless collaboration, code management, and maintaining repository integrity.
- Developed scalable backend applications using Python and Flask/Django, implementing RESTful APIs and integrating with databases like PostgreSQL and MongoDB.
- Leveraged Spring framework components including Spring Beans, Spring AOP, and Spring Boot to develop scalable and maintainable enterprise applications.
- Implemented MVC architecture using Spring MVC, ensuring efficient separation of concerns between UI, business logic, and data access layers.
- Configured and managed Java Beans within the Spring IOC container, optimizing application performance and maintainability.
- Developed complex service components for the Data Access Layer (DAL), implementing DAO classes using Java and Hibernate for efficient database interaction.
- Integrated Apache Camel for routing and message processing, enabling smooth data flow across microservices and external systems.
- Designed and implemented messaging interfaces using JMS, enabling reliable asynchronous communication between enterprise services.
- Utilized Microsoft SQL Server for executing queries, managing database transactions, and ensuring data integrity.
- Deployed and tested applications on WebLogic Application Server, leveraging Selenium for UI and functional testing.
- Developed unit test cases for Spring Controllers and Web Service Clients using JUnit and Mockito, ensuring high test coverage and reliability.
- Implemented application logging and error tracking using Log4J, facilitating debugging and system monitoring.

Education Details: Louisiana Tech University – Computer Science
