

JOHN PANDER

+1 618 339 6734 • HOUSTON, TEXAS • johnpander5000@gmail.com • www.linkedin.com/in/john-pander-b58638353/

Summary

Senior Software Engineer with over 9 years of experience in designing, developing, and deploying enterprise-grade applications using Java, Kotlin and modern web technologies. Expertise in building microservices architectures with Spring Boot, integrating with cloud platforms such as AWS and Azure, and implementing DevOps practices to automate CI/CD pipelines using Jenkins, Docker, and Kubernetes. Proficient in full-stack development, including front-end frameworks like Angular and React, with a strong focus on scalability, performance, and security. Passionate about driving digital transformation across industries such as fintech, e-commerce, and SaaS by developing scalable solutions that enhance business efficiency and innovation. Adept at leveraging cloud infrastructure, containerization, and orchestration tools to deliver robust, high-performance applications in Agile environments.

Professional Highlights

- **Java and Microservices Expertise:** Extensive experience in developing and deploying Java-based microservices using Spring Boot, Spring Cloud, and Spring Security. Successfully migrated monolithic applications to microservices, enhancing scalability and maintainability.
- **Full-Stack Development:** Developed dynamic, responsive single-page applications using Angular and React, integrated with RESTful APIs and microservices. Skilled in front-end technologies like HTML5, CSS3, Bootstrap, and JavaScript, ensuring seamless user experiences across devices.
- **DevOps Engineering:** Designed and implemented CI/CD pipelines using Jenkins, Bamboo, and GitLab CI, automating build, test, and deployment processes. Proficient in containerization with Docker, orchestrating services with Kubernetes, and managing infrastructure as code with Terraform and Ansible.
- **Cloud and Hosting Proficiency:** Deep expertise in cloud platforms, including AWS (EC2, S3, RDS, Lambda, ECS, EKS) and Azure (App Services, Azure DevOps, ARM, Azure Kubernetes Service). Experienced in setting up and managing cloud environments, optimizing cost, performance, and security.
- **Messaging and Streaming Solutions:** Implemented real-time data streaming and messaging solutions using Apache Kafka, RabbitMQ, and AWS SQS. Expertise in building reliable, scalable event-driven architectures for high-throughput applications.
- **Database Management:** Strong experience with SQL and NoSQL databases, including Oracle, MySQL, PostgreSQL, Cassandra, and MongoDB. Skilled in database design, query optimization, and performance tuning to handle large-scale data processing.
- **Agile and Test-Driven Development:** Led Agile teams, driving iterative development and continuous improvement. Proficient in TDD and BDD practices, utilizing JUnit, Mockito, Cucumber, and Selenium for comprehensive test coverage.

Skills

- **Java Technologies:** Java, J2EE, Kotlin, Spring Boot, Spring Cloud, Spring Security, Spring MVC, Hibernate, JPA, EJB, SOAP, RESTful Web Services, Microservices Architecture

- **DevOps Engineering:** Jenkins, GitLab CI, Bamboo, Docker, Kubernetes, Helm, Terraform, Ansible, Puppet, Chef, Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), CI/CD pipelines, Infrastructure as Code (IaC)
- **Cloud and Hosting:** AWS (EC2, S3, RDS, Lambda, CloudFormation, Elastic Beanstalk, ECS, EKS, SQS, SNS, CloudFront, VPC, IAM), Azure (Azure DevOps, Azure Kubernetes Service, ARM, App Services, Azure Functions, Azure Blob Storage), Google Cloud Platform (GCP), OpenShift, Pivotal Cloud Foundry (PCF), Nginx, Apache Kafka, RabbitMQ, Istio, Consul, Vault, Spinnaker, Docker Swarm, Traefik, HAProxy
- **Web Technologies:** HTML5, CSS3, JavaScript, TypeScript, Angular, React, Bootstrap, AJAX, jQuery, JSON, XML
- **Database Management:** Oracle, MySQL, PostgreSQL, Cassandra, MongoDB, DynamoDB, PL/SQL, NoSQL, Liquibase, Flyway
- **Version Control and CI/CD:** Git, GitHub, Bitbucket, Subversion (SVN), Maven, Gradle, Nexus, Artifactory
- **Testing and Debugging:** JUnit, Mockito, Cucumber, Selenium, Jasmine, Karma, Jest, Mocha, Chai, SonarQube, Postman
- **Agile Methodologies:** Scrum, Kanban, Test-Driven Development (TDD), Behavior-Driven Development (BDD), Continuous Integration (CI), Continuous Delivery (CD)

Experience

AutoWeb Technologies Senior Full Stack Java Developer

Wilmington, DE
02/2022 – Present

- Involved in Requirements for an Application, Analysis, Design, Development, and Testing of applications using the **AGILE** method (**SCRUM**).
- Designed and developed **Microservices** using **Spring Boot**.
- Developed and maintained **Android** applications using **Kotlin**, leveraging modern features such as coroutines and extension functions to improve code efficiency and readability.
- Transitioned legacy **Java codebases** to **Kotlin**, reducing boilerplate code and improving app performance by 15%.
- Designed and implemented scalable **APIs** using **Kotlin** and the **Spring Boot framework**, improving system throughput by 20%.
- Utilized **Kotlin Multiplatform** to share common business logic across **Android** and **iOS** platforms, reducing development time for cross-platform projects by 30%.
- Worked closely with **product teams** to ensure Kotlin-based features aligned with business requirements, resulting in a 10% increase in **user engagement**.
- Led the migration of legacy mainframe-based core **banking** solutions to modern **SaaS**-based architectures, improving system scalability and reducing downtime by 30%.
- Engineered high-performance **APIs** for mission-critical banking transactions, optimizing system responsiveness and reducing latency by 25%.
- Designed secure, scalable **API** architectures, improving data integrity and compliance with **banking** regulations.
- Troubleshoot and optimized multiple interconnected applications, ensuring 99.9% uptime in a high-volume **financial environment**.
- Collaborated with cross-functional teams to improve API security, implementing **TLS**, **SSL**, **OAuth 2.0**, and advanced authentication protocols.
- Proactively identified bottlenecks and optimized system performance, reducing API response times by 50%.
- Redesigned and re-implemented services using **NGINX**, **Node JS**, **Express JS**, **Mongo DB**, and **MySQL**.

- Developed and Integrated micro offerings using **Spring Boot** along with **Spring Cloud**, **Spring Security**. Worked on implementing co-life among **Spring MVC** primarily based **Monolith** and Spring Boot-based microservices.
- Developed Microservices using Spring Boot and deployed in **Pivotal Cloud Foundry** (PCF).
- Involved in building database **Models, APIs & Views** utilizing **Python** to build web-based solutions.
- Developed multi-threaded standalone apps in **Python** and **Java** to view Circuit parameters & performance.
- Developed **Python batch processors** to consume and produce various feeds.
- Developed entire frontend and backend modules using **Python** on the **Django** Web Framework.
- Developed **Business Logic** using **Python** on the **Django** Web Framework.
- Used the **Java API** to load data into Cassandra Clusters.
- Worked on real-time streaming data using **EJB, Spark**, and **Kafka**.
- Implemented Spring Boot microservices to process the messages into the **Kafka cluster setup**.
- Developed Automation Framework for Acceptance Testing using **Cucumber BDD** and **JUnit**.
- Implemented Kafka producer and consumer applications on Kafka cluster setup with the help of **Zookeeper**.
- Used **Spring Kafka API** calls to process the messages smoothly on Kafka Cluster setup.
- Analyzed the performance of the Cassandra cluster using **Node tool TP** stats and **CF** stats for thread analysis and latency analysis. Involved in the process of data modeling Cassandra **Schema**.
- Configured **Spark streaming** to receive real-time data from Kafka and store the stream data to **HDFS** using **Scala**.
- Experience in performance tuning a **Cassandra cluster** to optimize writes and reads.
- Development of **PowerShell scripts** to automate application deployment and data collection.
- Developed Merge jobs in **Python** to extract and load data into **MySQL** database.
- Creating **Rest APIs**, Endpoints to **GET, POST**, and **PUT** methods to fetch the data to integrate with the database to get the required data and used endpoints for the user interface to display data for users on the webpage.
- Deployed Spring Boot-based microservices **Docker** container using **Amazon EC2** container services and using **AWS admin console**.
- Web application responsive to all devices meeting accessibility following **WCAG 2.0** Guideline and **ADA** technical standards.
- Involved in development changes in meeting web accessibility standard WCAG 2.0.
- Designing solutions on **Azure DevOps, AWS, Google, Soft Layer** & other **hybrid cloud** options.
- Prepared the Azure cloud infrastructure with Azure Pipelines and Azure Resource Manager Templates.
- Developed UI patterns using **NodeJS** with **Bower** and **Yeoman** package managers.
- Worked on concepts of Azure Service Management (**ASM** - Classic model, **ARM** - Azure Resource Management) and experience in setting up **RBAC** roles (OOB) and Custom **RBAC** roles to Subscription level, or Resource Manager Level to manage Azure Resources.
- Experience with Docker Images/containers and **Kubernetes**.
- Used **Spring Boot**, which is radically faster in building cloud Microservices, and developed Spring-based applications with very little configuration.
- Integrated **Spring Security** with **JDBC** to manage user registration and login.
- Implemented filters for user **authentication** and user **authorization** by Spring Security.
- Using Frontend Technologies such as **HTML5, CSS3, Bootstrap, Angular 8**, and **JavaScript**.
- Having good implementation experience with installation and configuration of **Kubernetes**, clustering them, and managing local deployments in Kubernetes.
- Integrated the **Drools** and **JBPM** to application framework, which involved dynamic creation of knowledge base and Knowledge session.
- Wrote various types of Business rules in the **.drl** (Drools file) and **.ece** (Expectation files) using Drools rule engine for business decision-making.
- Developed REST controllers using **Spring Data REST** to serve the **UI** with required **JSON** data.
- Developed powerful **Single Page Applications** and dynamic responsive Web Applications with **Angular**.

- Worked on **RDBMS** Systems like **Oracle**, **SQL** Developer Server, and received expertise in writing **SQL** queries, **PL SQL** stored procedures, capabilities, triggers, and indexes, which are invoked by Batch methods.
- Involved in the deployment of Applications to **AWS** using **S3**, **RDS**, and **EC2**.
- Experience in writing automated test scripts using **Ruby** and **Cucumber**.
- Used **GIT**, **SourceTree**, and **BitBucket** as source management tools, giving a large velocity gain on centralized systems that need to communicate with a server.
- Used **Maven** as a build tool, automating the building, checking, publishing, and deployment, loading all of the dependencies from the **Nexus** artifact repository.
- Used **JUnit** and **Test Automation Tools** to test end-to-end applications, and using **Jenkins**, deployed the application in all environments.

BariesDev **Senior Java Developer**

San Francisco, CA
05/2019 - 01/2022

- Design, develop, and test **HTML5**, **CSS3**, **Bootstrap**, **JavaScript**, **React**, and **Angular** that meets accessibility and web browser standards for the website.
- **Spring Boot** Microservices were developed with microservice architecture using **REST** and **Kafka**.
- Worked on **Kibana** and **Elasticsearch** to identify the **Kafka** message failure scenarios.
- Used Couchbase **Python SDK** to build applications that use **Couchbase** Server.
- Deploying applications using **Lambda**, **ECS**, and **Docker** containers, and utilizing **CI/CD** processes.
- Deployed Docker-contained **Spring Boot** microservices into **AWS EC2** container service using **AWS admin** console and used **Lambda** to run applications in AWS console.
- Developed **RESTful** web services using **Jersey**, **Spring framework**, and **JAX-RS**.
- Developed user interface using **Angular** for **SPA** development.
- Used **Angular-Router** to turn applications into Single Page Applications.
- Implemented Angular code to handle cross-browser compatibility issues in Mozilla, IE, Safari, and Firefox.
- Worked on **React** JS Virtual DOM and React views, rendering using components containing additional components called custom HTML tags.
- Responsible for **React UI** and architecture. Building components library, including Tree, and Table Grid.
- Developed complex database objects like Stored Procedures, Functions, and Triggers using SQL and PL/SQL.
- Used **Node.js** for Node Package Manager (**NPM**) for building the project.
- Used **SASS** as CSS extension language and Foundation as CSS Framework.
- Followed **Agile**, actively participated in **Scrum**-Meetings, Daily Stand-ups, Backlog-grooming, Retrospectives, Sprint-Planning.
- Developed entire **frontend** and **backend** modules using **Python** on the **Django** Web Framework.
- Proven success in integrating and developing robust Java-based solutions within **ServiceNow** and **Microsoft SharePoint**, driving efficient **workflows** and significantly enhancing platform functionality.
- Applied **Git** and **SVN** version control, ensuring seamless collaboration and secure code management across multiple teams.
- Used Stash to manage our **GIT** repositories and accessed them using **SSH** Keys.
- Used **Jenkins** server, which builds and configures various instances of **CSA**.

3 Media Web **Java Developer**

Dallas, Texas
03/2017 - 04/2019

- Interacted with the product managers to understand their business needs and design the site per their acceptance criteria.
- Created and Consumed Web Services using **RESTful** web services.

- Involved in component development and used design patterns such as **Singleton**, **Factory**, and Data Access Object (**DAO**) in the implementation of the application. Used Spring Context for EJB Support and **Spring DAO** for enhanced **JDBC** and **DAO** support.
- Developed the front-end application using **HTML5**, **CSS3**, **JavaScript**, **JSON**, **NodeJS**, **AngularJS**.
- Created Angular services that consume the **REST API**'s from the backend and display that data on the User Interface.
- Involved in developing **XML**, **HTML**, and **JavaScript** for client-side presentation data validation on the client-side within the forms and developed a core component of Analytics with **Node.js**.
- Used **GitHub** repository for a fast, flexible, and collaborative development process.
- Actively participated in Code review of peers and thus maintaining Quality Assurance.
- Used **AJAX** to support dynamic page element rendering to enhance user experience.
- Worked on **AGILE** methodology model, which includes bi-weekly sprints and **daily scrum** to discuss the design and work progress.
- Involved in putting the entries into external **XML** files which are read by doc-builder.
- Involved in taking the **client's requirements** up-to-date and worked on them accordingly.
- Involved in finding and fixing the bugs and making modifications to already existing code.

App Maisters Inc **Java/UI Developer**

Houston, TX
10/2015 - 02/2017

- Involved in the analysis, development, coding, and testing of user requirements for the **various sub-projects**.
- Involved in the day-to-day discussions with **Architects** to get clarity on the requirement analysis and new releases.
- Involved in technical design, which included defining the screens, validations, error messages, coding standards, etc.
- Developed the application by implementing **MVC** (Model, View, Controller) framework.
- Designed Frontend within object-oriented JavaScript Framework like **Angular JS**, **Node JS**.
- Involved in the modules Enroll, Accounts Overview, Open an Account, and Funds Transfer.
- Working on the development work as well as support for the previous releases.
- Conducted root cause analysis to identify the cause of a specific problem/fault and resolved the same.
- Troubleshooting of application-related issues by analyzing log files created in **Linux/Unix** environment.
- Responsibilities include release support and production support.
- Handle new work requests and enhancements.

Education

BSc Computer Science | Stanford University | California, USA

09/2015
