🌐 Glen Burnie, MD, USA

SUMMARY

Seasoned Senior Full Stack Developer with over 9 years of experience, specializing in building robust, scalable web applications and microservices with Python, Django, and FastAPI. Expert in creating dynamic, responsive front-end interfaces using React and TypeScript. Possesses deep expertise in AWS cloud services, including Lambda, EC2, S3, and RDS, for architecting and deploying highly available and cost-effective solutions. Proficient in end-to-end development, from database design to implementing CI/CD pipelines with AWS CodePipeline and Docker. A passionate advocate for clean code, Test-Driven Development (TDD), and Agile methodologies, consistently delivering high-quality software that aligns with business objectives.

SKILLS

React	Next.js	Angular	RESTful API	Automated Testing	AWS	Python	Django	Flask
CI/CD	CSS	FastAPI	C#	Database Architecture	Pandas / NumPy	Terraform	Debugging	
AWS EKS	Docker	Lambda	DynamoDB	EC2	Electron.js	Figma	Ethers.js	
Front-end	GCP	Git	Github	Gitlab	GraphQL	Hyperledger	JavaScript	Jest
Kubernetes								
Mocha	MongoDB	MySQL	Nest.js	Node.js	TypeScript	web3.py	Solidity	

EXPERIENCE

Senior Full Stack and Blockchain Developer

Polka City

📅 10/2020 - 11/2024 📍 Miramar, United States

Polka City is a decentralized application for an NFT marketplace for P2E game-fi with DEX and DeFi protocols in it.

- Engineered and maintained backend microservices using Python and FastAPI, creating high-performance RESTful and GraphQL APIs that improved data handling efficiency.
- Developed a customer-facing portal by integrating the Python backend with a React and Typescript frontend, significantly boosting user engagement.
- Architected and deployed scalable cloud infrastructure on **AWS**, leveraging **AWS Lambda** for serverless functions, **Amazon RDS** for PostgreSQL, and **Amazon S3** for secure blob storage.
- Containerized applications using Docker and orchestrated deployment on AWS ECS, enhancing scalability and reducing deployment times.
- Leveraged TDD methodologies, writing comprehensive unit tests with pytest and end-to-end tests with Cypress to ensure software reliability and reduce bugs.
- Migrated a legacy inventory management system to a Python-based microservices architecture, reducing system downtime by 40%.
- Utilized Web3.py for secure interaction with blockchain smart contracts and integrated wallet functionality.
- Implemented GraphQL with Apollo to optimize data fetching, reducing network payload compared to REST endpoints.

- Participated in back-office UI development by using Angular and created reusable Angular components for dashboards, reducing front-end development time.
 - Wrote 200+ unit tests to ensure 1% of code within SDLC was without bugs.
 - By using Subgraph Indexing, succeeded to catch events from contracts and get transaction histories for customers to show their transaction histories on the Frontend.
 - Deployed containerized applications using Docker on AWS, improving scalability and reducing deployment times.
 - Collaborated in Agile teams, participating in sprint planning and delivering features on time for 95% of project milestones.
-

Senior Full Stack and Blockchain Developer

Technest Solution

📅 01/2019 - 09/2020 📍 Dubai, United Arab Emirates

Peakdefi is a crypto trading platform with DeFi protocols and B2C SDK.

- Designed and implemented a robust backend for a hospital management system using Django, integrating with Microsoft Dynamic 365 to enhance data workflows.
 - Built a comprehensive management dashboard from scratch using Python for backend logic and React with TypeScript for the frontend interface.
 - Applied the CQRS pattern within a microservices architecture using FastAPI and React, with Dapper for data access and AWS RDS for database management.
 - Developed a responsive frontend platform using React with Redux and Context API, implementing lazy-loading for optimized performance.
 - Wrote and maintained unit tests with pytest and Jest, achieving 90% code coverage and reducing manual testing time.
 - Contributed to code reviews, testing, and debugging for optimal code quality and maintainability.
 - Engineered CI/CD using Gitlab, AWS, developed test cases and PRs for various environments.
 - Collaborated with QA teams to integrate automated testing in CI/CD pipelines, reducing production bugs.
-

Backend and DevOps Developer

Global Green Tech Solutions

📅 08/2017 - 01/2022 📍 Orlando, United States

Global Green Tech Solutions is an IT consulting company by providing talents to the clients and other businesses.

- Architected and deployed a multi-tier SaaS platform on AWS, using Python (Django) for the backend and React for the front-end, leading to increased customer acquisition.
 - Spearheaded the adoption of AWS services including EC2, S3, Lambda, and RDS, utilizing Terraform for infrastructure-as-code to ensure reproducible and scalable environments.
 - Implemented and optimized CI/CD pipelines using AWS CodePipeline and Docker, automating testing and deployment processes.
 - Designed and managed database architecture using Amazon DynamoDB for high-performance needs and RDS for relational data, optimizing for cost and efficiency in AWS.
 - Provided mentorship to developers on Python best practices, AWS solutions, and modern DevOps methodologies.
 - Reviewed fellow developers' code and provided mentor ship to enhance their skills.
-

Full Stack Developer

Quape

📅 06/2016 - 06/2017 📍 Singapore, Singapore

Quape is an IT consulting company by providing talents to the clients and solving technical challenges.

- Developed backend services and RESTful APIs using Python and Flask to support React-based front-end applications.
- Built user-friendly interfaces using front-end frameworks like React in Typescript and modern CSS frameworks like Tailwind CSS.
- Utilized AWS EC2 and S3 for application hosting and storage, developing fault-tolerant systems.

- Worked with various databases including MySQL, PostgreSQL, and MongoDB for efficient data storage and retrieval.
- Developed new UI/UX functionality to create a more functional user experience.
- Developed pixel perfect and responsive websites with given Figma/XD design by using React including Tailwind CSS, styled- components and MUI etc.
- Designed and implemented web applications along with 3rd party software integrations as a web team liaison for all interdepartmental and customer-facing projects.
- Rebuilt 4-year-old SaaS application in React with full user experience redesign to release a beta MVP in 8 months.
- Participated in the initial wave of developers learning and implementing the React.

EDUCATION

Bachelor's Degree in Computer Science

[Towson University](#)

📅 01/2011 - 01/2015
