

Justin Fred

👤 Profile

Experienced and results-driven Senior Full Stack Developer with expertise in Golang, Python, JavaScript, microservices architecture, and cloud computing. Proven ability to design, develop, and deploy scalable backend & frontend solutions in high-performance environments. Strong problem-solving skills and experience working with cross-functional teams to deliver software that aligns with business goals. Passionate about continuous learning and adopting new technologies.

📁 Employment History

Senior Full-Stack Engineer at Patch My PC

November 2021 — Present

- Designed and led the implementation of a microservices-based architecture, improving modularity and scalability.
- Each service was designed to be independently deployable, enhancing fault tolerance and simplifying scaling during peak traffic.
- Developed core backend services using Golang, handling thousands of user requests daily.
- Focused on optimizing system performance by profiling and reducing response times by up to 50%.
- Spearheaded migration to AWS using EC2 for compute, RDS for relational databases, and S3 for storage.
- Set up CI/CD pipelines and Docker for continuous integration, leading to faster releases and a reduction in production bugs.
- Designed and implemented auto-scaling strategies using AWS Elastic Load Balancing and Kubernetes, ensuring seamless scalability during high-traffic events without downtime or degraded performance.
- Implemented Redis for caching frequently accessed data, resulting in a 40% reduction in database load and faster data retrieval.
- Spearheaded the development of a scalable data analysis and management platform using TypeScript, and React.js.
- Provided technical mentorship to a team of developers, guiding them in best practices, efficient coding techniques, and ensuring codebase maintainability through code reviews, refactoring, and collaboration with cross-functional teams to deliver high-quality software solutions

Details

Miami, FL, 33972
United States

Skills

- Golang
- Django Web Framework
- Python (Programming Language)
- ReactJS
- TypeScript
- Microservices
- Databases
- Amazon Web Services
- Docker
- Kubernetes
- Redis
- Amazon Elastic Compute Cloud
- Amazon S3
- Elastic Load Balancing
- Relational Databases
- PostgreSQL
- AngularJS
- Apache Kafka
- Application Programming Interfaces (APIs)
- Extract Transform Load (ETL)
- Fastapi
- Jenkins

Senior Full-Stack Engineer at Evora IT Solutions

January 2018 — November 2021

- Worked on a cloud-based application for processing real-time data from IoT devices.
- Utilized Golang to build backend services that handle high-throughput data streams.
- Developed data pipelines to ingest, process, and store data from multiple sources, leveraging tools like Kafka for message queuing and AWS Kinesis for real-time data streaming.
- Built RESTful APIs to interact with external services and internal databases, enabling smooth integration with other software systems.
- Containerized services using Docker and deployed them in a Kubernetes cluster for efficient orchestration, scaling, and high availability.
- Led the transformation of frontend solutions by migrating a legacy Angular codebase to a modern, scalable React-based application, enhancing performance and maintainability.
- Collaborated closely with other developers and product managers to deliver end-to-end features, ensuring alignment between business objectives and technical solutions.

Full-Stack Engineer at ITC STAFFING INC

December 2013 — January 2018

- Developed and deployed highly scalable backend services for a financial platform using Django and FastAPI, handling over thousands of API requests daily.
- Migrated legacy monolithic applications to a microservices architecture, increasing maintainability and scalability.
- Designed and optimized database schemas for PostgreSQL, reducing query response time by 30%.
- Automated data processing pipelines for large datasets using Pandas and NumPy, streamlining ETL workflows.
- Automated testing pipelines using PyTest, achieving 95% test coverage and reducing production issues by 20%.
- Built and maintained CI/CD pipelines using Jenkins, ensuring smooth deployment across multiple environments.
- Developed a fully responsive platform and migrated an outdated website with over thousands of users to modern single-page applications using React, resulting in a 20% increase in user engagement and a highly positive user experience.
- Collaborated closely with cross-functional teams, participated in code reviews, and employed industry best practices to ensure efficient code structure, maintainable codebase, and seamless collaboration throughout the development lifecycle.
