SUMMARY

Frontend Developer with **4+ years** of experience **taking ownership** of end-to-end product development, building **0→1** scalable, **user-centric responsive web applications** using React.js, Angular, JavaScript, Typescript and RESTful APIs. Focused on delivering high-performance, user-centric solutions through **thoughtful architecture, modern styling, and attention to detail.**

PROFESSIONAL EXPERIENCE

Frontend Developer Intern

Hormone Insight – Auvra

Sep 2025 – Present

San Francisco, CA, USA

- Took ownership of the **0→1 frontend architecture** for an AI-powered women's wellness mobile application using **React Native (Expo)**, building reusable components, custom animations, and gradient overlays for a **responsive, scalable design**.
- Developed **AI-driven chatbot** and **gamified engagement features** powered by **LLM APIs**, delivering real-time hormonal insights and an interactive user experience across iOS and Android.
- **Reduced development time** by 30-40% through architectural refinements, unit testing and AI-assisted workflows using **Cursor** and **Claude**, ensuring pixel-perfect, production-quality UX via **Figma Dev Mode**.

Software Engineer Intern

BNMC

Jan 2025 – May 2025

Buffalo, New York, USA

- Developed and deployed a **MERN-stack** analytics dashboard with secure authentication and **RESTful APIs**, integrating **Power BI** for real-time insights to help users track activity, get personalized recommendations and reducing manual reporting by 40%.
- Integrated advanced **3D visualizations** and scalable, **responsive UI/UX** while collaborating with cross-functional teams through **Trello** to enhance performance, maintainability, and user experience across devices.

Frontend Software Developer

Blackcurrant Labs

June 2021 – May 2024

Mumbai, MH, India

- Designed and developed SPAs using **React.js, Angular** and **Next.js** leveraging React Hooks, Context API, Redux, Angular Router, Reactive Forms, RxJS, Services, Components, and Animations to create responsive, interactive user interfaces, demonstrating problem solving skills to enhance navigation, form handling, and state management for improved user experience.
- Conducted **Proofs of Concept (POCs)** for tools like **SwiperJS, DataTables, Google Maps API, and AmCharts**, improving user authentication success by 25% and reducing response times by 40% through optimized integrations.
- **Spearheaded a team** of junior developers, mentoring on best practices and debugging, while improving project tracking by 17% and process efficiency by 15% through Agile development and **JIRA**-driven interface design refinements.

Frontend Developer Intern

Bajranga Constructions

May 2020 – Dec 2020

Mumbai, MH, India

- Developed **modular, reusable ReactJS** components to improve maintainability, scalability, and UI consistency.
- Optimized front-end performance and reducing mobile load times by 25% through responsive design (**CSS media queries, flexible grids**) and efficient version control with Git.

PROJECTS

Patient Navigator System

- Built a patient-facing app using **Next.js + Supabase (Postgres, Auth, Storage)**, integrating **Ollama-based medical LLMs** for **chatbot** assistance, **AI-driven care plans**, appointment orchestration, reminders, and personalized health insights.
- Collaborated with team to develop a clinician dashboard with role-based access, real-time alerts, **EMR API integrations, vector search (RAG-based medical data retrieval), microservices-based** escalation workflows, and **HIPAA-compliant** security.

Hoopr: Music licensing marketplace (hoopr.ai)

- Built a responsive **Angular web app**, boosting performance by 60% through **TypeScript** refactoring, optimized lifecycle methods, **lazy-loading, eager loading** and dynamic admin layouts with grid-based components and **ImageKit** integration.
- Improved SEO and analytics-driven growth, increasing organic traffic by 30% and conversions by 48% through **Google Analytics insights**, while ensuring 100% functionality and **B2B platform** stability through testing and QA collaboration.

Satma: Waste recycling and management company

- Led **UI/UX** implementation for an **ERP system**, designing responsive interfaces with **Angular** and implementing **dynamic theming** with JavaScript and CSS, resulting in a 45% increase in user interaction and a 28% improvement in user experience.
- Integrated **Chart.js** for **geospatial visualization**, created detailed tabular reports for waste monitoring, and optimized geospatial data operations with **asynchronous APIs**, reducing response times by 15% and enhancing user responsiveness.

TECHNICAL SKILLS

- **Web Development:** HTML5, CSS3, Bootstrap, Tailwind CSS, Angular, ReactJS, Material UI, RxJS, Next.js, React Native, RESTful APIs, Node.js, Express.js, MySQL, Firebase, MongoDB, Microservices, SDLC
- **Programming Languages:** JavaScript (ES6), Typescript, Python, C, C++, Java
- **Tools and Frameworks:** Git/GitHub, Postman, AWS, CI/CD pipelines, GCP, Power BI, Figma, Adobe XD, Jira, Trello, Notion.

EDUCATION

Master of Science in Information Science | University at Buffalo, The State University of New York (GPA: 3.8/4) June 2025

Relevant Courses: Web Development, Human-Computer Interaction, Agile Software Development, Artificial Intelligence, Generative AI, IT Cloud Infrastructure, Distributed Systems, DBMS, Data Structure and Algorithms, Object-oriented Design.

Bachelor of Engineering in Computer Science and Engineering | University of Mumbai, India (CGPA: 8.69/10) May2021
