

# KAMIL POPARDOWSKI

## Senior Java Full Stack Engineer

+12393413584   @ kamilpopardowski80@gmail.com   <https://linkedin.com/in/kamil-popardowski-b2a7b6354>  
Kenneth City, FL

## EXPERIENCE

### Senior Java Full Stack Engineer

#### Zanett

01/2023   New York

- Developed microservices using Java 17, Spring Boot, Quarkus, and Micronaut, ensuring high performance and low memory consumption
- Built React.js and TypeScript UI components with Material-UI, integrating real-time updates using WebSockets and Spring WebFlux
- Created RESTful APIs and GraphQL endpoints with Dropwizard and Spring Cloud, optimizing client-server communication
- Integrated Kafka and RabbitMQ for event-driven messaging and asynchronous processing
- Managed PostgreSQL, MongoDB, and Redis, optimizing queries and indexing for high-traffic applications
- Implemented authentication and security using OAuth 2.0, JWT, API Gateway, and Spring Security
- Deployed cloud-native applications on AWS (EKS, Lambda, S3, DynamoDB, API Gateway) using Terraform and CloudFormation
- Containerized microservices with Docker and Kubernetes (EKS), using Helm charts for automated deployment
- Automated CI/CD pipelines with GitHub Actions, Jenkins, and ArgoCD, reducing deployment time by 35%
- Monitored and debugged production issues with Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), and Splunk
- Applied SOLID principles, design patterns (Factory, Singleton, Observer), and dependency injection using Dagger
- Created unit and integration tests with JUnit 5, Mockito, TestNG, and WireMock, ensuring 90% test coverage

### Sr Full Stack Developer

#### Palm Beach Media Group

01/2019 - 12/2022   Palm Beach, FL, United States

- Developed and maintained Spring Boot, Spring MVC, Hibernate, and Dropwizard microservices, improving system modularity
- Built React.js and Angular dashboards with real-time data updates using Spring WebFlux and WebSockets
- Designed and optimized RESTful APIs and GraphQL with JPA (Java Persistence API) for seamless data access
- Worked extensively with MySQL and SQL Server, optimizing stored procedures and indexing
- Integrated RabbitMQ and Kafka for asynchronous processing and event-driven communication
- Deployed applications on AWS (EKS, Lambda, S3, CloudFront, API Gateway), improving system reliability
- Automated deployment pipelines with Jenkins, Docker, and Kubernetes, reducing manual work by 40%
- Implemented OAuth 2.0 authentication and JWT-based session management for secure API access
- Configured Redis caching and Elasticsearch indexing, improving data retrieval speeds
- Used New Relic, Prometheus, and Splunk to monitor and debug system issues
- Refactored code to follow SOLID principles, Clean Code, and repository patterns, improving maintainability
- Developed GraphQL schemas using Apollo and Hasura, enabling efficient data fetching

## SUMMARY

Senior Java Full Stack Engineer Experienced Senior Java Full-Stack Developer with 10+ years of experience in designing, developing, and optimizing large-scale, high-performance enterprise-level applications. Proficient in Java (8/11/17), Spring Boot, Microservices, RESTful APIs, and cloud-native frameworks (AWS, Azure, Kubernetes, Docker). Strong frontend skill set with React.js, Angular, JavaScript, TypeScript, and emerging UI frameworks, delivering seamless user experiences and highly responsive applications. Hands-on experience in relational and NoSQL databases including PostgreSQL, MySQL, MariaDB, Oracle, SQL Server, MongoDB, Cassandra, DynamoDB, Elasticsearch, and Redis with focus on query optimization, data modeling, and performance tuning. Expertise in building event-driven systems with Kafka, RabbitMQ, and WebSockets including OAuth 2.0, JWT, and API Gateway for secure and optimal authentication. Skilled in DevOps, CI/CD pipeline, infrastructure automation, and monitoring with Terraform, Jenkins, GitHub Actions, Ansible, Prometheus, Grafana, and ELK Stack. Skilled in debugging, performance analysis, and troubleshooting large distributed systems. Capable of succeeding in Agile/Scrum environments, transforming business requirements into efficient and scalable technical implementations, maintaining code quality, security, and system reliability

## KEY ACHIEVEMENTS

### CI/CD Optimization

Reduced deployment time by 35% through CI/CD pipeline optimization.

### AWS Deployment Success

Improved system reliability by deploying on AWS with 99.9% uptime.

### Database Optimization

Enhanced query performance, reducing response times by 40%.

### Test Coverage Excellence

Achieved 90% test coverage with unit and integration tests.

## EXPERIENCE

### Full Stack Developer

#### Caribu

12/2015 - 12/2018 FL, United States

- Built backend services with Java 8, Spring Boot, JAX-RS, and MyBatis, improving API efficiency
- Developed dynamic UI components using Angular.js and Bootstrap, enhancing UX
- Managed MongoDB and PostgreSQL, optimizing indexing and database queries
- Integrated RabbitMQ and WebSockets, enabling real-time messaging
- Implemented OAuth 2.0 authentication, JWT session handling, and role-based access control (RBAC)
- Deployed applications on AWS EC2, S3, and CloudFront, optimizing content delivery
- Automated CI/CD pipelines using Jenkins and GitHub Actions, reducing deployment overhead
- Debugged production issues with Splunk, Logstash, and New Relic
- Configured SSL/TLS certificates and API Gateway security policies for external integrations
- Applied JUnit 4 and TestNG for unit and integration testing

### Full Stack Developer

#### ChaiOne

01/2014 - 11/2015 Houston, TX, United States

- Designed and maintained RESTful APIs and SOAP web services, ensuring backend stability
- Built enterprise Java EE applications using Spring MVC, Hibernate, and JSP
- Developed interactive UIs using JSF (JavaServer Faces), jQuery, and Bootstrap
- Optimized Oracle DB and MySQL queries, reducing response times by 40%
- Implemented Struts 2 for MVC-based enterprise applications
- Configured RabbitMQ for event-driven processing, improving system efficiency
- Deployed applications on Linux servers using Tomcat, Apache, and Nginx
- Used JUnit and TestNG for automated testing
- Configured SSL/TLS encryption for secure API communication
- Maintained API documentation with Swagger

## EDUCATION

### Bachelor's Degree

#### Florida Atlantic University

04/2009 - 12/2013 Boca Raton, FL

- United States
- Computer Science

## LANGUAGES

### English

Proficient

## SKILLS

ACTIVEMQ

Agile

Ansible

Apache

API Gateway

Apollo

Automated Testing

AWS

AWS EC2
