

Kao Moua Senior Software Engineer

moua.kao8894@gmail.com | (323) 484-8497 | linkedin.com/in/kao-moua-94km | Stockton, CA 95209

SUMMARY

Accomplished full-stack developer with a strong track record of delivering innovative, scalable solutions. Proficient in **React.js**, **Node.js**, **TypeScript**, and modern cloud technologies, I design intuitive user interfaces, build robust backend systems, and integrate secure, efficient APIs. I thrive in collaborative environments and actively enhance team productivity through effective development practices. With a sharp focus on performance optimization, accessibility, and security, I deliver solutions that meet both user needs and business goals.

SKILLS

Frontend — React, Next.js, Vue, TypeScript, JavaScript, Tailwind CSS

Backend — Node.js, Express, GraphQL, REST, Prisma, Sequelize, Zod

Databases — MongoDB, DynamoDB, PostgreSQL, MySQL, Redis, Elasticsearch

Cloud & DevOps — AWS, Azure, Docker, Kubernetes, Jenkins, Terraform, Git

EXPERIENCE

Senior Software Engineer, Brookstone 04/2022 – 04/2025 | Merrimack, NH

- Architected and delivered an internal full-stack platform for product, order, and fulfillment management using React, TypeScript, Node.js, and PostgreSQL, reducing manual workload across departments.
- Designed a scalable API layer combining GraphQL (Apollo Server) and REST (Express), integrated with Prisma ORM and Zod for type-safe data handling and schema validation.
- Deployed containerized backend infrastructure via Docker and GitHub Actions, utilizing AWS (ECS, RDS, S3) and Redis to support cloud scalability and performance.
- Implemented mission-critical features such as multi-location inventory, custom order routing, and real-time shipment tracking via integrations with Stripe, Shippo, and EasyPost.
- Built a modular, responsive frontend using Tailwind CSS and Headless UI, maintained test coverage across the stack with Jest, Supertest, and React Testing Library.

Full Stack Engineer, Metova 04/2019 – 02/2022 | Benton, AR

- Developed full-featured web apps for clients in healthcare, fintech, and education using React, TypeScript, and Node.js to deliver seamless cross-platform user experiences.
- Designed and deployed microservices infrastructure using Docker and Kubernetes, provisioning environments through Terraform on AWS and Azure.
- Automated CI/CD pipelines using Jenkins, significantly reducing deployment friction and enabling faster feature rollouts for SaaS platforms.
- Rebuilt outdated frontends in React with modern best practices, and optimized backend APIs for low latency and high concurrency.
- Delivered data visualization dashboards, secure REST APIs, and HIPAA-compliant features while collaborating in Agile teams and participating in architecture reviews.

Full Stack Developer, McDonald's 05/2016 – 02/2019 | Chicago, IL

- Developed backend modules with Node.js (Express) to support global ordering workflows, including order validation, promotions, and loyalty logic.
- Built dynamic, reusable React components with TypeScript and integrated them with internal APIs to drive mobile and web ordering systems.
- Migrated legacy codebases from JavaScript to TypeScript, improving developer productivity, tooling support, and long-term maintainability.
- Optimized backend APIs by introducing caching layers, batching, and async job processing to ensure smooth performance under heavy traffic.
- Contributed to features involving regional tax handling, currency localization, and real-time kitchen system data syncing across restaurant devices.

EDUCATION

Bachelor's Degree in Computer Science, 09/2012 – 05/2016
California State University, Stanislaus
