

KAVYA SUDHA

SOFTWARE DEVELOPER

OH, USA | (551) 368-6477 | kavyasudha1009@gmail.com | [LinkedIn](#)

SUMMARY

- **Full Stack Developer with almost 5 years of experience** designing and delivering scalable applications across finance, healthcare & enterprise platforms, specializing in microservices, secure data workflows, and high-performance solutions.
- Proficient in **Spring Data JPA, Spring Security, OAuth2, JWT**, and **RBAC**, implementing modular backend architectures, authentication frameworks, and cross-service communication for transactional integrity and regulatory compliance.
- Skilled in developing interactive and responsive frontends using **React.js, Redux, Angular 12, Bootstrap**, and **SASS**, integrating state management with backend APIs for real-time updates and seamless user experiences.
- Hands-on expertise in **PostgreSQL, MongoDB, Redis, SQL Server**, and **Hibernate ORM**, optimizing relational and document schemas, indexing strategies, and caching to enhance query performance and system throughput.
- Experienced in event-driven and asynchronous architectures leveraging **Kafka, RabbitMQ**, and messaging queues, improving fraud detection pipelines, real-time transaction processing, and multi-service workflow orchestration.
- Adept in **CI/CD** and cloud deployments using **Maven, Gradle, Jenkins, AWS ECS, CloudFormation**, and automated testing with **Mockito** and **JUnit**, ensuring zero-downtime releases and maintainable production pipelines.

SKILLS

Languages:	Java, JavaScript, SQL, Python, C, C++, C#
Frameworks:	Spring Boot, Spring Security, JPA, Hibernate, Spring Batch, Spring AOP, Spring Core, Spring IOC, Struts, Node.js, React.js, Angular 12, jQuery, Express.js
Web Technologies:	HTML, HTML5, CSS/CSS3, Bootstrap, AJAX, JSON, XML, UI Material, SASS, Typescript, ES6, Redux, React Hooks, REST API, RESTful API, jQuery
Databases:	PostgreSQL, MongoDB, Oracle SQL, MySQL, PL/SQL, DynamoDB, SQL Server, Redis, Hibernate ORM
Cloud & DevOps:	Amazon Web Services, Docker, Kubernetes, Jenkins, Gradle, ANT, CloudFormation
Messaging & Event Streaming:	Kafka, RabbitMQ, Messaging Queues
Testing & CI/CD:	JUnit, Mockito, Selenium, Postman, SonarQube
Version Control:	Git, GitHub, SVN, Bitbucket
IDEs:	Visual Studio Code, Eclipse IDE, IntelliJ IDEA, Spring Tool Suite (STS)
Web Servers:	Oracle WebLogic, IBM WebSphere, Apache Tomcat, JBoss
Build/Other Tools:	SOAP/REST API, Jira, Jupyter
Methodologies:	SDLC, Agile, Waterfall, SCRUM

WORK EXPERIENCE

Chales Schwab, OH Software Developer	June 2024 – Current
Project: Digital Loan Onboarding and Fraud Detection Platform	
• Configured centralized state management using Redux, synchronizing UI data across navigation steps to ensure reliable progression of applications while preventing duplicate transactions & validation mismatches across distributed loan journeys. • Leveraged PostgreSQL relational design to structure normalized schemas for customer profiles, enabling faster cross-entity joins and optimizing query response times to handle 2.4 million loan application records with consistent accuracy. • Architected scalable document-driven storage in MongoDB, managing identity verification proofs and unstructured metadata while achieving faster retrieval of OCR-scanned KYC documents across 1.8 million unique customer onboarding journeys. • Designed dynamic entity persistence with Spring Data JPA, enabling efficient cross-entity mapping abstractions and eliminating bottlenecks, which reduced backend response latency for high-frequency loan eligibility checks by 29%. • Implemented streaming processors with Kafka and Java-based microservices, applying partitioned topics and consumer groups to deliver anomaly detection pipelines, improving fraud detection accuracy by 32% & reducing financial fraud exposure. • Secured sensitive workflows with Spring Security, applying OAuth2 authentication and JWT-based tokenization, enforcing RBAC policies to safeguard PII, ensuring compliance with PCI DSS, GDPR, and SOX regulatory mandates.	

Project: Real-Time Healthcare Integration and Monitoring Platform

- Developed and optimized backend microservices in **Java** and **Spring Boot**, delivering scalable solutions for processing high-volume healthcare data and improving response latency.
- Implemented secure **RESTful API** integrations with upstream and downstream systems, enabling seamless data exchange and improving interoperability across enterprise platforms.
- Automated **CI/CD pipelines** using **Jenkins** and **Docker**, streamlining deployment workflows, reducing manual effort, and improving release efficiency.
- Designed and monitored **Grafana** dashboards, providing real-time production insights, proactive incident detection, and reducing mean-time-to-resolve.
- Collaborated with **QA, DevOps, and business analysts** to troubleshoot production issues, ensuring SLA compliance and smooth operations.
- Optimized database performance and security by tuning **SQL** queries, improving transactional throughput, and implementing robust authentication mechanisms.

Accenture, India | Software Engineer

Mar 2020 – May 2022

Project: Smart Customer Engagement Platform

- Architected multi-tier web layers with **Angular 12**, delivering dynamic loan status dashboards and enabling real-time updates across customer sessions while boosting UI responsiveness by 18 milliseconds.
- Automated dependency resolution with **Maven**, streamlining build lifecycles across teams, reducing integration errors to just 3 per month, and consistent artifact generation across 25 microservices.
- Integrated **Hibernate ORM**, mapping relational tables to domain models for claim processing modules, which reduced manual mapping overhead by **32 %** while ensuring transactional integrity across operations.
- Developed RESTful service testing using **Mockito**, enabling isolated unit tests of controllers, services, and DAO layers, achieving test case coverage on 275 endpoints within CI/CD pipelines.
- Enhanced UI appeal and layout consistency using **Bootstrap**, designing responsive form components for client onboarding workflows, achieving a uniform 1024×768 and mobile render fidelity across 6 device breakpoints.
- Enabled schema migrations with **Liquibase**, managing version-controlled database changes, automating rollbacks and forward deployments for 48 updates, reducing migration failures by **27 %** compared to manual scripts.
- Employed **Redis** caching for reference data storage, reducing repeated database fetches during loan eligibility checks, accelerating average response delivery from 850 to 320 milliseconds per request.
- Orchestrated asynchronous job handling with **RabbitMQ**, queuing document verification tasks and achieving faster processing throughput—handling 1,200 tasks per minute and reducing queue backlog surges by **35 %**.
- Built client-side animations with **SASS**, compiling modular stylesheets that improved CSS maintainability across 180 style rules and reducing deployment CSS bundle size by 41 kilobytes.
- Implemented job orchestration using **Gradle** scripts, standardizing development workflows, enabling multi-module project builds across 12 teams, and reducing build times from 9 to 5 minutes—a 44 % improvement.

EDUCATION

Master of Science in Software Engineering

Aug 2023 – May 2025

- Wright State University, Dayton, OH, USA

Bachelor of Technology in Electronics & Communication Engineering

Jul 2019 – Jun 2022

- Geethanjali College of Engineering and Technology, HYD, India
