

Keerthan Tumuganti

Software Engineer

keerthan.t@themailpad.com | (480) 420 8890 | [LinkedIn](#) | Overland Park, KS

Summary

Innovative **Software Engineer with 5+ years** of experience in full-stack, backend, and mobile application development across banking and financial services. Proficient in Java, Spring Boot, React.js, Angular, Kotlin, and Swift, with expertise in designing cloud-native, microservices-based architectures on AWS, GCP, Azure, Kubernetes, and Docker. Skilled in developing secure, high-performance applications with RESTful & GraphQL APIs, OAuth2.0, JWT, SSO, and biometric authentication. Strong track record of optimizing CI/CD pipelines, reducing release cycles by up to 50%, and improving system scalability and reliability by 30–40%. Adept at Agile/Scrum delivery, TDD/BDD practices, and mentoring junior engineers, with proven ability to partner with global teams and stakeholders to deliver enterprise-grade technology solutions.

Education

Master of Science in Computer Information Systems & Information Technology

University of Central Missouri

Skills

- Programming Languages:** Java, Kotlin, Swift, Objective-C, Python, JavaScript, TypeScript, C#, C++, SQL, PL/SQL
- Frameworks & Libraries:** Spring Boot, Spring MVC, Hibernate, React.js, Angular, Node.js, GraphQL, Jetpack Compose, SwiftUI, UIKit, RxJava
- Mobile Development:** iOS (Swift, Objective-C, SwiftUI, UIKit, CoreML, VisionKit), Android (Java, Kotlin, Jetpack, LiveData), RESTful & GraphQL API integration
- Cloud & DevOps:** AWS (EC2, S3, Lambda, EKS, RDS, CloudWatch, SQS, SNS), Google Cloud Platform (Cloud Run, Cloud Functions, GKE, Data Proc), Azure, Kubernetes, Docker, OpenShift, Terraform
- CI/CD & Build Tools:** Jenkins, GitLab CI/CD, TeamCity, Maven, Gradle, Git, Artifactory
- Databases:** Oracle, MySQL, PostgreSQL, MongoDB, Neo4j
- Messaging & Streaming:** Kafka, JMS, RabbitMQ, MQ Series
- Testing & QA:** JUnit, Mockito, Cucumber, Jest, XCTest, Postman, Selenium, Test-Driven Development (TDD), Behavior-Driven Development (BDD)
- Security & Authentication:** OAuth 2.0, SSO, JWT, Keychain, Biometric Authentication, Mobile App Encryption, Secure API Integration
- Web & UI Technologies:** HTML5, CSS3, Bootstrap, Responsive Design, UI/UX Prototyping
- Development Methodologies:** Agile, Scrum, SDLC, Continuous Delivery, SRE practices

Professional Experience

JPMorgan Chase & Co., IL

Aug 2024 – Present / USA

Software Engineer

- Designed, developed, and deployed secure, scalable, and high-performance applications for Investment Banking (CIB) and Consumer & Community Banking divisions, delivering enterprise-grade solutions by building mobile applications (iOS – Swift, Objective-C, SwiftUI, UIKit; Android – Java, Kotlin, Jetpack Compose) and integrating backend services with Java, Spring Boot, Hibernate, SQL/PLSQL, resulting in a 25% reduction in system latency and improved transaction throughput.
- Implemented enterprise-grade authentication and security mechanisms including OAuth 2.0, SSO, biometrics, device registration, Keychain integration, and end-to-end encryption, hardening mobile platforms against vulnerabilities and reducing security risks by 30%, while ensuring compliance with banking security, resiliency, and regulatory standards.
- Engineered cloud-native, microservices-based architectures deployed on Google Cloud Platform (GCP), AWS, and Kubernetes, enabling distributed, fault-tolerant systems with automated recovery; contributed to architecture design artifacts ensuring scalability, resiliency, and long-term maintainability of critical financial applications.
- Optimized CI/CD delivery pipelines using Jenkins, TeamCity, Maven, Git, and Artifactory and integrated automated testing frameworks (JUnit, Mockito, Jest, XCTest, Cucumber) within Agile/Scrum and BDD workflows, reducing release cycle time by 40%, increasing code coverage to 90%, and ensuring stable production deployments.
- Partnered with cross-functional global teams (business stakeholders, UX/UI designers, and engineering leads) to rapidly prototype and deploy customer-facing features, integrating native mobile capabilities (Camera, GPS, Push Notifications, CoreML, VisionKit) for advanced user experiences; provided L3 production support, diagnosing and resolving incidents under strict SLAs to minimize downtime, while mentoring junior developers and actively contributing to engineering communities of practice to drive knowledge sharing and best practices.

Deutsche Bank

March 2023 – July 2024 / USA

Software Developer

- Led end-to-end development of cloud-native applications and microservices using Java 8, Spring Boot, Hibernate, RESTful APIs, and Oracle SQL, while deploying solutions on Google Cloud (Cloud Run, GKE, Cloud Functions) and OpenShift, improving system scalability, reliability, and performance by 30%.
- Designed and implemented event-driven and messaging solutions leveraging JMS, MQ, and Apache Kafka, enabling high-throughput real-time processing and reducing data lag by 40%, while integrating OAuth2.0, JWT, and role-based access controls to strengthen application security and ensure compliance.
- Developed and maintained responsive front-end components using Angular and React.js, delivering seamless, cross-platform user experiences that boosted adoption rates and improved overall system usability for business stakeholders.
- Automated and optimized CI/CD pipelines with Jenkins, TeamCity, Maven, and Artifactory, cutting release cycles by 50% and minimizing downtime; promoted Agile, Scrum, and BDD/TDD practices with JUnit, Mockito, and Cucumber, increasing code quality and achieving 90% test coverage across modules.
- Collaborated with globally distributed teams (US, UK, Germany, India) and business stakeholders to define architecture strategies and new feature development, while providing L3 production support that reduced mean time to recovery from 1 day to under 2 hours and mentoring junior developers to drive adoption of modern coding, testing, and cloud engineering best practices..

KPIT technologies

June 2019 – Dec 2021/ India

Associate Software Engineer

- Built robust RESTful APIs using Angular's built-in features or third-party libraries, facilitating seamless integration with backend systems and improving data exchange efficiency by 10%.
- Improved a scalable and maintainable Spring Boot microservice architecture, enabling the application to handle user traffic with minimal performance degradation and improving code maintainability by 50%.
- Accelerated data integration processes by 30% by leveraging the power of Spring Data JPA/JDBC and Spring for Apache Kafka to establish robust and efficient connections with external systems.
- Employed AWS S3 for storing and retrieving application assets with a 60% improvement in application load times and a reduction in infrastructure costs, while enabling seamless scaling of applications.
- Developed a GraphQL API that reduced data over-fetching improvement in application load times and a 60% reduction in bandwidth usage, leading to a faster and more responsive user experience.
- Utilized JUnit and Mockito leading to a 25% reduction in development time and code quality through early identification and resolution of bugs to more maintainable and robust code.
- Optimized PostgreSQL database queries, resulting in a 20% reduction in average query response times, leading to a significantly improved user experience with faster page loads and more responsive application interactions.
