

Kelechi Ugoh | Database Administrator

Lehi, Utah | +1 (801) 837-1318 | kelechiugoh73@gmail.com | LinkedIn

Summary:

Results-driven **SQL Server Database Administrator** with **5+ years** of hands-on experience architecting, managing, and optimizing enterprise-grade database solutions across on-premise, hybrid, and cloud environments (Azure & AWS). Proven success in deploying and supporting SQL Server 2005–2022, with deep expertise in high availability (AlwaysOn, clustering, log shipping), disaster recovery planning, and performance tuning. Highly skilled in T-SQL scripting, PowerShell automation, and building scalable ETL pipelines using SSIS to support BI and analytics platforms. Demonstrated ability to manage data lakes and warehouses, automate reporting with SSRS/Power BI, and implement secure, resilient systems using modern DevOps and cloud-native practices. Recognized for proactive problem-solving, stakeholder collaboration, and delivering data-driven solutions that improve reliability, performance, and compliance across enterprise systems.

Skills:

Database Platforms: SQL Server (2005–2022), MySQL, PostgreSQL

Cloud Platforms: Azure (Azure SQL, Data Factory), AWS (RDS)

High Availability & Disaster Recovery (HADR): AlwaysOn Availability Groups, SQL Server Clustering, Database Mirroring, Log Shipping

Backup & Recovery: Full, Differential, Log Backups, Cohesity

Performance Tuning: Query Tuning, Execution Plans, Index Optimization, DMV Monitoring

Data Integration & ETL: SSIS, ETL, Data Migration & Integration

Reporting & BI: SSRS, Power BI

Scripting & Automation: T-SQL, PowerShell, Python

Monitoring & Tools: Redgate Tools, SolarWinds, Idera

Virtualization: VMware

Operating Systems: Windows, Linux

Version Control & Collaboration: Git, Jira, Confluence, SharePoint, ServiceNow

Education:

Bachelor of Science, Computer Science

Institute of Management and Technology

Certifications:

- **Certified Scrum Master** | International Scrum Institute
- **Azure Data Fundamentals** | Microsoft
- **AWS Certified Cloud Practitioner** | Amazon Web Services
- **Azure Database Administrator Associate** | Microsoft

Professional Experience:

Database Administrator

| Sep 2021 – Present

Wintrust Financial Corporation

- Administered and supported 24/7 SQL Server environments (2012–2019) across production, development, and staging systems, ensuring high availability and minimal downtime.
- Designed and deployed a scalable SQL Azure cloud architecture, improving data accessibility and system responsiveness by 40%.
- Improved overall database performance by 15% through T-SQL query optimization, index tuning, and automation of repetitive DBA tasks.
- Deployed and configured SQL Server Reporting Services (SSRS) to establish standardized reporting templates and ensure seamless integration via shared data sources.
- Built real-time data pipelines using Apache Kafka and Spark Streaming, enabling event-driven analytics and proactive alerting on critical metrics.

- Developed and managed cloud-based data lakes and warehouses on AWS RDS and Azure Data Lake/Data Factory, supporting enterprise-level data analytics and reporting.
- Oversaw SQL Server deployments in VMware environments, achieving 30% resource efficiency through careful capacity planning and workload balancing.
- Implemented mission-critical HA/DR solutions, including Always On Availability Groups, clustering, and log shipping, significantly reducing RTO and RPO.
- Led disaster recovery strategy development, performing routine backups, restores, and failover testing to safeguard data integrity and availability.
- Conducted advanced performance tuning—including query plan analysis, index optimization, and stored procedure review—to enhance system throughput.
- Built Power BI dashboards connected to SQL Server backends, enabling real-time monitoring of system health, performance KPIs, and storage trends.
- Successfully migrated legacy SQL Server 2008 databases to 2016 with near-zero downtime, while preserving data consistency and referential integrity.
- Partnered with Data Science teams to deliver ETL pipelines supporting machine learning initiatives and predictive modeling in production environments.
- Created, deployed, and maintained robust SSIS packages to automate complex data transformation and load operations across disparate systems.
- Applied service packs, security patches, and SQL Server updates to ensure optimal performance, compliance, and system resilience.
- Designed and executed backup/recovery strategies for large-scale Production and QA databases, maintaining high levels of data recoverability and business continuity.

SQL Database Administrator DXC Technology, USA

| Mar 2020 – Aug 2021

- Administered and maintained large-scale SQL Server environments (1–2 TB), ensuring 99.99% uptime and consistent performance across development, staging, and production environments.
- Designed and implemented SQL Server Reporting Services (SSRS) solutions, enhancing executive insights and boosting BI visibility by 35%.
- Strengthened data privacy and compliance by applying row-level security and data masking policies across Snowflake and Azure Data Factory environments.
- Built incremental data loading pipelines to optimize compute resource utilization and reduce ETL job runtimes for high-volume datasets.
- Developed Power BI dashboards integrated with SQL Server, automating 60% of manual reporting tasks and improving stakeholder access to critical metrics.
- Architected and maintained HA/DR solutions including Availability Groups and AlwaysOn replication, supporting business continuity and minimizing data loss risks.
- Created automation scripts in PowerShell and T-SQL to streamline routine DBA operations, reducing manual tasks by over 20%.
- Engineered and maintained robust database schemas, including tables, views, stored procedures, triggers, and constraints tailored to evolving business needs.
- Executed complex database migrations, including an upgrade from SQL Server 2008 to 2014, achieving zero data loss and minimal service disruption.
- Developed comprehensive backup and restore strategies using native SQL Server tools to ensure recoverability of production environments.
- Led regular performance tuning initiatives—optimizing execution plans, indexing strategies, and slow-running queries for faster response times.
- Supported VLDB environments, resolving bottlenecks and optimizing storage and compute resource allocations for high-demand applications.
- Partnered with cross-functional teams (Developers, QA, Infrastructure) to resolve incidents and deliver scalable, secure database solutions aligned with project goals.
- Implemented SQL Server clustering and replication models to improve availability, fault tolerance, and disaster readiness across data centers.
