

Kelvin Diaz Senior Java Backend Engineer

Fort Lauderdale, FL 33312 • (240) 324-9145 • kelvin.diaz.dev@gmail.com • www.linkedin.com/in/kelvin-a-diaz/

Professional Summary

Results-driven Senior Java Backend Engineer with 10+ years of experience in designing, developing, and optimizing scalable backend systems using Java. Proven expertise in microservices architecture, cloud computing (AWS, Azure, GCP), DevOps, and security best practices.

Skills

- **Backend Development:** Java (Java 8 to 21), Kotlin, Scala, Spring Framework, Spring Boot, Spring Data, Spring Security, Spring Cloud, Spring JPA, Hibernate ORM
- **Software Architecture & Design Patterns:** Microservices Architecture, Multi-Tenant Architecture, Low-Level System Design, Hexagonal Architecture, Event-Driven Design, Domain-Driven Design (DDD), Service-Oriented Architecture (SOA), Reactive Programming (RxJava, VertX, WebFlux), Object-Oriented Programming (OOP), SOLID Principles
- **Databases & Data Management:** PostgreSQL, MySQL, Oracle, SQL Server, MongoDB, Redis, Elasticsearch, Flyway, Liquibase
- **APIs & Messaging Systems:** RESTful APIs, SOAP APIs, GraphQL, Apache Kafka, RabbitMQ
- **Cloud & DevOps:** AWS (EC2, S3, RDS, Glue, CloudWatch), Azure, Google Cloud, Docker, Kubernetes, Terraform, AWS CloudFormation, Jenkins, GitHub Actions, GitLab CI/CD, CircleCI, Bamboo, Octopus, TeamCity, NoOps Infrastructure
- **Testing & Code Quality:** JUnit, Mockito, TestNG, SonarQube, Checkmarx, Test-Driven Development (TDD), Behavior-Driven Development (BDD), Contract Testing
- **Version Control & Build Tools:** Git (GitHub, GitLab, Bitbucket), Gradle, Maven
- **Security & Authentication:** OAuth2, OIDC, Spring Security, Security Best Practices, AppSec
- **Monitoring & Logging:** Prometheus, Grafana, Dynatrace, Splunk, CloudWatch
- **Project Management & Collaboration:** Jira
- **Software Development Practices:** Pair Programming, Code Review, Release Management, Sprint Planning & Agile Estimation
- **Soft Skills:** Strong Communication, Cross-Functional Team Collaboration, Stakeholder Communication, Leadership, Mentorship, Creativity & Risk-Taking, Team Building, Conflict Resolution, Critical Thinking, Problem-Solving, Adaptability, Agile & Scrum Methodologies, Time Management, Customer-Oriented Mindset, Business Needs Understanding

Work History

Senior Backend Engineer, 03/2022 - 02/2025

Haletale – Fort Lauderdale, Florida (<https://haletale.com/>)

- Led the development of Haletale, an innovative property management platform, optimizing leasing processes for real estate agents and tenants.
- Spearheaded the migration of a monolithic Ruby on Rails application to a scalable Java Spring Boot-based microservices architecture, decomposing the system into 11 independent microservices.
- Implemented OAuth 2.0 and JWT authentication for secure access control, ensuring robust data security and compliance.

- Integrated third-party APIs such as SendGrid (email), Twilio (SMS), AWS S3 (document storage), Experian & TransUnion (credit checks), Finicity (banking details), and Stripe.
 - Designed and maintained PostgreSQL schemas following a Database per Microservice approach, improving performance and scalability.
 - Advocated for Test-Driven Development (TDD), leading to higher code quality, reduced bugs, and improved maintainability.
 - Collaborated closely with frontend, DevOps, and QA teams, ensuring seamless system integration and deployment.
 - Mentored junior engineers, fostering skill development and knowledge-sharing.
- Technologies:** Java, Spring Boot, Microservices, PostgreSQL, OAuth 2.0, JWT, Apache Kafka, RabbitMQ, Redis, Docker, Kubernetes, AWS, Terraform, Stripe API, Twilio, SendGrid

Senior Software Engineer, 09/2019 - 02/2022

Curahealth – Garland, Texas (<https://curahealth.com/>)

- Designed and developed scalable backend services for a healthcare management platform, enhancing patient data processing and reporting.
 - Built RESTful APIs for seamless interoperability with third-party healthcare providers and insurance systems.
 - Migrated critical data workflows from on-premises SQL Server to AWS RDS (PostgreSQL), reducing downtime and maintenance costs.
 - Led the implementation of FHIR-compliant API standards, ensuring compatibility with modern electronic health record (EHR) systems.
 - Automated infrastructure provisioning using Terraform and optimized CI/CD pipelines to enhance deployment efficiency.
 - Applied best security practices with OAuth 2.0 and Spring Security, ensuring compliance with HIPAA regulations.
- Technologies:** Java, Spring Boot, PostgreSQL, AWS, FHIR, Docker, Kubernetes, Terraform, Apache Kafka, RabbitMQ, OAuth 2.0, JUnit, Mockito

Java Backend Engineer, 08/2015 - 07/2019

Adaptec Solutions – Rochester, New York (<https://adaptecsolutions.com/>)

- Developed and maintained Java-based microservices for enterprise resource planning (ERP) systems, improving operational efficiency.
 - Designed GraphQL APIs for more efficient data retrieval, reducing response times by 40%.
 - Implemented Event-Driven Architecture (EDA) with Apache Kafka, improving asynchronous processing and system resilience.
 - Led the refactoring of legacy systems, modernizing outdated Java EE applications to Spring Boot microservices.
 - Contributed to performance optimization, reducing database query times using Elasticsearch and Redis caching.
- Technologies:** Java, Spring Boot, Microservices, GraphQL, Apache Kafka, Redis, AWS, Elasticsearch, Docker, Kubernetes, CI/CD, SQL Server, MongoDB

Education

Bachelor's Degree: Computer Science

University of Florida - Gainesville, Florida
