

Keval Makadiya

Full Stack Developer

Seattle, WA | 7477772151|makadiyakeval28@gmail.com| [LinkedIn](#)

SUMMARY

Skilled Full Stack Developer with 5+ years of experience building scalable, cloud-native applications using Java, Spring Boot, Node.js, and React.js. Proficient in developing RESTful and GraphQL APIs, integrating real-time data with Apache Kafka, and deploying services on AWS (EC2, S3, Lambda, EKS). Experienced in automating CI/CD pipelines using Jenkins, Docker, and Helm for seamless deployments. Adept at implementing secure, high-performance frontends with React, TypeScript, and Next.js. Strong collaborator in Agile teams, with a focus on delivering reliable, test-driven software across e-commerce and financial domains.

WORK EXPERIENCE

Shopify, WA, USA

July 2023 – Present

Full Stack Developer

- Designed and developed microservices using Java, Spring Boot, and JPA/Hibernate to support Shopify merchant onboarding, order processing, and payment workflows within a multi-tenant e-commerce architecture.
- Developed scalable RESTful and GraphQL APIs with Node.js, enabling seamless communication between internal admin portals and third-party sales channel integrations.
- Built Apache Spark jobs over Kafka Streams to aggregate order events and merchant activity logs, powering near real-time analytics and compliance dashboards for business operations.
- Delivered responsive UI components using Next.js, React.js, TypeScript, and CSS, improving monitoring interfaces for operations teams tracking system queues, error states, and service health metrics.
- Modeled product and merchant metadata using MySQL and leveraged MongoDB to store dynamic content structures like product feeds, app settings, and audit logs.
- Automated cloud infrastructure provisioning via Terraform and GitLab CI, while using RabbitMQ to handle asynchronous tasks like invoice generation and webhook retries across staging and production.
- Built CI/CD pipelines with Jenkins, containerized microservices using Docker, and deployed to AWS EKS using Helm charts, supporting blue-green deployments and rapid rollbacks.
- Integrated AWS Lambda, S3, and SQS for event-driven processing such as asset uploads, notification triggers, and API throttling, improving system responsiveness and scalability.
- Implemented centralized logging using ELK Stack and CloudWatch, enabling real-time service monitoring, alerting, and faster incident response during high-traffic sale events.
- Developed automated test pipelines with JUnit, Mockito, REST-assured, and Selenium, ensuring stability across feature rollouts and improving test coverage across UI and API layers.
- Secured merchant-facing and internal APIs using Spring Security and OAuth2, enforcing token-based authentication and fine-grained RBAC aligned with Shopify's data governance policies.
- Participated in Agile Scrum ceremonies including sprint planning, daily stand-ups, and retrospectives, collaborating with cross-functional teams to ship customer-centric features and platform enhancements.

Fiserv, GA, USA

May 2020 – June 2023

Full Stack Developer

- Developed full-stack financial applications using Java 8/11, Spring Boot, and integrated REST and GraphQL APIs to support scalable data flow and improve platform responsiveness by 35%.
- Built dynamic, component-based UI with React.js, Redux, Bootstrap, jQuery, and TypeScript, delivering fully responsive, cross-browser compatible modules with enhanced usability.
- Implemented core business logic using Spring Boot, Hibernate, and JPA for transaction services, audit logging, and reporting modules, ensuring accurate financial processing.
- Strengthened application security through Spring Security and JWT-based authentication, implementing user roles and access layers, reducing security vulnerabilities across services.
- Developed and maintained REST APIs in Spring Boot and Node.js, enabling smooth interaction between microservices and third-party integrations.
- Used Node.js for asynchronous backend workflows like payment processing, email notifications, and webhook integrations to increase transaction speed.
- Integrated Apache Kafka for real-time streaming modules such as alert systems and payment tracking, improving system scalability and reliability.
- Wrote unit and integration tests using JUnit, Mockito, and Selenium, achieving 80%+ code coverage and reducing post-deployment bugs by 20%.
- Managed relational and NoSQL databases with PostgreSQL and MySQL, using optimized queries, indexing, and joining for high-volume data processing.
- Deployed cloud-native applications to AWS EC2 and S3, implemented load balancers, and automated builds using Maven for seamless production releases.
- Set up CI/CD pipelines via Jenkins, integrating unit tests, Docker builds, and deployment scripts to improve release consistency and reduce manual errors.
- Followed Agile development methodologies with Jira and Confluence, actively participating in sprint planning, standups, retrospectives, and product demos.

TECHNICAL SKILLS

Programming Languages: Java (Core, Java 8/11/17+), Python, C, C++, PL/SQL, R Language

Frameworks/Libraries: Spring MVC, Hibernate, Spring Boot, Microservices, Spring Security, Spring Data (JPA, MongoDB, Redis), Angular (8, 10, 16), React.js, Vue.js, Node.js, Express.js API Technologies: REST, GraphQL J2EE

Technologies: Servlets, JSP, JavaBeans, JDBC Web Technologies: HTML, CSS, JavaScript, TypeScript, Bootstrap, jQuery, Ajax, JSON, XML

Cloud Technologies: AWS (EC2, S3, RDS, Lambda, DynamoDB, CloudWatch), Azure (Functions, Cosmos DB, Virtual Machines, Azure DevOps), GCP, Kubernetes

Application Servers: Apache Tomcat, JBoss Databases: MySQL, PostgreSQL, MongoDB, Cassandra NoSQL, Oracle

Build/Other Tools: UML, MS Visio, Maven, Gradle, Junit, Mockito, Selenium, Jenkins, Azure DevOps, Apache Kafka

Methodologies: SDLC, Agile, Waterfall Version Control Tools: Git, GitHub, GitLab, Trello, Bitbucket IDEs: NetBeans, IntelliJ IDEA, Eclipse, VS Code

Operating Systems: Windows, Linux, MacOS, Unix
