PROFESSIONAL SUMMARY

Cloud & DevOps Professional with 7+ years of experience in driving migrations, modernization, and automation across AWS and Microsoft Azure. Proficient in building and managing cloud-native solutions while utilizing technologies such as Microsoft Azure AD, Spring Boot, Power Apps, DevOps methodologies, and cryptography practices. Experienced in overseeing seamless transitions of applications and infrastructure while ensuring security, compliance, and governance across environments. Skilled in enhancing CI/CD pipelines, integrating DevSecOps practices, and aligning technical deliveries with business strategy.

PROFESSIONAL EXPERIENCE

Senior Engineering Lead

Hilton (Remote) | Sept 2025 – Present

- Driving platform engineering initiatives focused on Microsoft Azure, including infrastructure automation, scalability, and identity management, while adhering to IAM standards.
 - Proactively adopting best practices in CI/CD, DevSecOps, and Azure-based environments, fostering efficient delivery and operations while driving cost optimization.
-

Technical Lead

Freelancer Consultant – Remote | April 2023 – July 2025

- Design, deploy, and optimize Azure resources, including identity services, storage, extensions, and compliant workflows to ensure enhanced security and performance.
- Implement secure governance when provisioning Azure resources, aligning with enterprise security standards, IAM policies, and industry best practices.

- Drive IAM best practices by enforcing RBAC policies, managing Azure AD configurations, and developing monitoring solutions to ensure compliance and efficiency.
 - Execute troubleshooting and remediation for IAM-related issues in Azure environments, minimizing downtime and ensuring smooth operational performance.
 - Continuously design and implement enhancements to Azure-based CI/CD pipelines, embedding DevSecOps practices for secure application delivery and compliance.
-

Senior Software Engineer

Upwork | Jan 2020 – March 2023

- Architect and implement multi-cloud strategies utilizing Azure and integrating identity and access management technologies for robust, secure applications.
 - Champion platform engineering best practices to enhance the security posture of identities and enable seamless user provisioning in Azure environments.
 - Implement GitOps-driven workflows aligning with Azure environments, ensuring consistent, auditable deployments with integrated security measures.
 - Lead infrastructure modernization initiatives, migrating legacy systems to Azure-native architectures with a focus on identity management.
 - Integrate compliance-as-code frameworks with Azure services to enforce IAM standards and regulatory controls across organizational solutions.
 - Optimize Azure resource usage by leveraging cloud-native identity services and applying cost management strategies for efficient deployments.
 - Build and oversee disaster recovery architectures in Azure, ensuring robust identity security and business continuity across multiple regions.
-

Software Engineer

Ducat software solutions | Feb 2017 – Dec 2020

- Troubleshoot migration and deployment issues in Azure, ensuring flawless transitions and effective implementation of IAM across environments.
- Provision and secure Azure resources, focusing on IAM roles, identity services, and containerized applications to enhance security postures.

- Implement infrastructure-as-code practices with Terraform in Azure environments for consistent, secure deployments aligning with organizational policies.
- Resolve production issues across Azure environments, optimizing identity management processes and enhancing reliability within secure frameworks.
