

KISHOR DAS

SENIOR FULL-STACK PYTHON & SNOWFLAKE ARCHITECT

Expert in Data Warehousing, Cloud ETL, and Scalable Enterprise Solutions

Atlanta, GA | ikishoredas@gmail.com | (719) 509-9243

SUMMARY

12+ years of experience designing and implementing enterprise-level data and application solutions across healthcare, financial, retail, and aviation domains. Proven expertise in Python, Snowflake, SQL, AWS, and ETL/ELT pipelines, delivering scalable and secure data platforms. Skilled in optimizing cloud data warehouses, reducing costs, and enabling regulatory-compliant analytics. Adept at leading migrations, architecting data solutions, and mentoring engineering teams to improve performance and efficiency.

SKILLS

- **Programming:** Python, JavaScript, Go, Pandas, NumPy
- **Databases:** Snowflake Warehouse, SQL Server, PostgreSQL, MySQL, DynamoDB, Cassandra, MongoDB
- **Frameworks & Tools:** Django, Flask, React, Angular/Ionic, Bootstrap, Docker, Git, Nginx
- **Cloud & ETL:** Snowflake, Matillion, AWS (EC2, S3, Redshift, Athena), Airflow, DBT (Data Build Tool), Azure Synapse, GCP Big Query
- **DevOps & CI/CD:** Git, Jenkins, GitHub Actions, Terraform, Docker, Kubernetes, CI/CD Pipelines
- **BI & Analytics:** Tableau, Power BI
- **Methodologies:** Agile/Scrum, Data Modeling (Kimball Star/Snowflake), HIPAA/PCI Compliance

PROFESSIONAL EXPERIENCE

AMN Healthcare, Coppel, Texas, USA | Jan 2024 to Present

Principal Python/Snowflake Developer

- Designed and deployed scalable ETL/ELT pipelines using Python and Snowflake to process high-volume healthcare data.
- Optimized Snowflake performance through partitioning, clustering, and warehouse tuning, cutting query runtimes by 35%.
- Wrote complex SQL queries, stored procedures, UDFs, and views in Snowflake to support analytics, reporting, and operational dashboards.
- Integrated DBT models with Snowflake for modular, version-controlled transformations, improving maintainability and collaboration.
- Implemented CI/CD pipelines (GitHub Actions + Snowflake + DBT) to automate deployment, reducing release errors by 30%.
- Deployed Python-based data services across AWS and Azure, enabling hybrid-cloud integration for healthcare analytics.
- Automated workflows using Airflow and Python, reducing manual tasks by 40%.
- Implementing data partitioning, clustering, and micro-partition pruning techniques in Snowflake for query performance optimization.
- Partnered with data architects and business stakeholders to define data models and schema designs aligned with business goals.

- Migrated legacy systems to Snowflake Cloud, streamlining healthcare integrations and lowering storage costs by 20%.
- Built secure, HIPAA-compliant pipelines with role-based access and encryption.
- Applying Python-based automation for monitoring data quality, validation checks, and alerting systems.
- Improved cost efficiency by optimizing Snowflake warehouse sizing, caching strategies, and query tuning.
- Mentored junior developers and guided them on best practices in Python development and Snowflake usage.
- Partnered with BI/Data Science teams to deliver analytics for patient care, workforce planning, and financial operations.
- Integrating Snowflake with third-party tools (Tableau, Power BI, Azure, AWS services) for seamless analytics and reporting.
- Conducted performance benchmarking, load testing, and tuning to ensure high availability and scalability of Snowflake environments.
- Delivering end-to-end data solutions from ingestion to reporting that enhanced decision-making and operational efficiency across AMN Healthcare.
- Architecting the complete Python based MTV (Model-Template-View) architecture for the entire project.
- Working with different teams on different deployment strategies for Python applications on Linux servers.

Discover Financial Services, Riverwoods, IL, USA | Sep 2020 – Dec 2023

Sr. Snowflake Developer

- Designed and developed data pipelines and ETL processes using Snowflake, SQL, and Python to support enterprise-wide financial reporting and analytics.
- Built and optimized enterprise Snowflake data warehouses for large-scale financial transactions.
- Developed complex SQL queries, stored procedures, and performance-tuned scripts to improve reporting efficiency and reduce query runtimes.
- Migrated legacy platforms to Snowflake Cloud, ensuring scalability and PCI compliance.
- Implemented role-based access controls, encryption, and compliance features to align with PCI and financial regulatory standards.
- Established automated CI/CD workflows with Jenkins and Git, ensuring secure and repeatable deployments of data pipelines.
- Designed multi-cloud compatible Snowflake pipelines leveraging AWS + Azure storage and compute resources.
- Automated data ingestion pipelines with Snowflake + AWS/Azure, reducing ETL runtime significantly.
- Partnered with risk, compliance, and analytics teams to deliver data-driven insights for fraud detection, credit risk, and customer analytics.
- Improved reporting efficiency by 30% through query tuning and clustering.
- Supported fraud detection and credit risk analytics by delivering secure, high-performance data solutions.
- Mentored junior developers and established best practices for Snowflake query optimization, cost management, and secure data handling.

JetBlue Airways, Long Island City, NY, USA. | Mar 2019–Aug 2020

Snowflake Developer.

- Designed and implemented Snowflake pipelines for flight, crew, and passenger data.

- Developed complex SQL queries, stored procedures, and views to support reporting and real-time decision-making in airline operations.
- Migrated data from legacy on-premise systems to Snowflake Cloud Data Platform, improving scalability and reliability.
- Enabled operational analytics and revenue management through optimized schema design.
- Reduced ETL processing time by 25% using partitioning and warehouse optimization.
- Automated workflows and data refreshes through Python scripts and scheduling tools for consistent data availability.
- Partnered with business teams to deliver data-driven insights on flight delays, passenger trends, and operational efficiency.
- Implemented data governance, security policies, and compliance measures to ensure safe handling of sensitive passenger data.
- Integrated Snowflake with Tableau and Power BI for airline performance dashboards.
- Collaborated with cross-functional teams including data engineers, analysts, and architects to deliver end-to-end airline data solutions.

Chevron, San Ramon, California, USA | Mar 2018 – Feb 2019

Senior Full Stack Developer-Python.

- Developed Python/Django web applications and APIs to support energy operations.
- Built data processing workflows in Python and SQL, automating reporting and reducing manual effort.
- Optimized application performance by implementing scalable database solutions with SQL and NoSQL technologies.
- Developed data processing scripts in Python to automate workflows, improving efficiency and reducing manual effort.
- Championed adoption of modern data stack (Snowflake, DBT, Airflow, CI/CD), driving faster, more reliable delivery of analytics across teams.
- Collaborated with cross-functional teams to deliver end-to-end software solutions for asset management and operational dashboards.
- Designed scalable database solutions for enterprise applications.
- Participated in Agile/Scrum ceremonies, contributing to sprint planning, backlog grooming, and code reviews.
- Deployed applications on cloud and on-prem environments, ensuring high availability.

Albertsons, Boise, ID, USA | Jan 2016 – Feb 2018

Sr. Python Developer/Data Analyst (Focused).

- Developed and maintained Python-based ETL pipelines to process large-scale retail and supply chain data, improving data availability for analytics.
- Automated reporting dashboards using Python, Pandas, and SQL, providing near real-time insights on sales, inventory, and promotions.
- Conducted data quality validation and profiling, reducing reporting errors by 25% and ensuring accuracy for executive decision-making.
- Leveraged Pandas, NumPy, and Matplotlib to perform statistical analysis for pricing and demand forecasting, increasing promotional ROI.

- Integrated diverse data sources (SQL Server, MySQL, and flat files) into centralized analytics pipelines, enhancing data accessibility.
- Partnered with business stakeholders to define KPIs and metrics, aligning analytics solutions with operational goals.
- Optimized ETL workflows to reduce data processing time by 20%, improving refresh frequency for business reports.
- Built ad-hoc data analysis scripts in Python to answer business questions, cutting turnaround time for insights by 40%.
- Designed data visualization dashboards in Tableau/Power BI to track store performance, promotions, and customer buying patterns.
- Collaborated with cross-functional teams in an Agile/Scrum environment, contributing to sprint planning, backlog grooming, and daily standups.
- Applied statistical analysis with Pandas, NumPy, and Matplotlib to optimize pricing strategies.

Amdocs, Jersey City, New Jersey, USA | Mar 2013 – Dec 2015

Python Programmer

- Designed and developed Python applications to automate telecom billing and reporting processes, reducing manual effort by 30%.
- Built ETL workflows in Python and SQL to integrate data from multiple telecom systems into a centralized data warehouse.
- Created reusable Python libraries for common data processing tasks, accelerating development cycles across teams.
- Developed data parsing scripts to process large telecom log files, improving accuracy and speed of billing reconciliations.
- Optimized SQL queries and Python scripts to enhance performance of billing analytics by 25%.
- Partnered with business analysts to translate telecom billing requirements into automated Python solutions.
- Implemented data validation and error-handling frameworks in Python, ensuring reliable downstream reporting.
- Collaborated with QA teams to build automated unit and integration tests, improving release quality.
- Documented Python code, ETL processes, and workflows for knowledge sharing and onboarding of new team members.
- Supported deployment and maintenance of Python-based applications in production environments, ensuring system stability and availability.
- Partnered with analysts to deliver data-driven solutions enhancing billing accuracy.

EDUCATION

- Bachelor of Science, National University of Dhaka, Bangladesh, 2006
