PROFILE

Senior Software Engineer with 10 years of experience in designing and developing scalable, high-performance web applications using Python, Django, Flask, FastAPI, and React/Angular for both startups and large enterprises. Proven expertise in leading development teams, architecting robust microservices, and optimizing cloud infrastructure on AWS and GCP. Skilled in integrating AI/ML solutions to enhance application intelligence, drive data-driven insights, and automate processes for improved performance and scalability.

WORK EXPERIENCE

Senior Software Engineer – Concentrix

Jan 2023 – Present

Newark, CA

- Designed and developed a high-performance, user-centric web application leveraging a Python (Django)-based microservices architecture and React, optimizing inter-service communication and increasing customer engagement by 20%.
- Designed and implemented RESTful APIs using Django REST Framework (DRF) and GraphQL endpoints, integrating them with frontend components built using React to ensure seamless data exchange, enhance user interactions, and support scalable application architecture.
- Optimized database interactions using SQLAlchemy and Python ORM techniques across MySQL, PostgreSQL, and MongoDB databases, reducing response times by 30% and improving query performance for over 200+ tables.
- Enhanced application performance by integrating Elasticsearch and Redis for rapid data retrieval, and implementing efficient Python practices such as asynchronous programming (using Celery and asyncio), caching strategies, and optimized list comprehensions, resulting in a 30% improvement in response times and 20% reduction in server load.
- Deployed and managed containerized applications with Docker and Kubernetes, ensuring seamless scaling and CI/CD pipeline integration via Jenkins and Bitbucket for efficient development workflows.
- Achieved over 90% code quality through rigorous testing strategies, using PyTest, Mock, and integration testing, resulting in a 30% reduction in post-deployment issues.
- Designed, developed, and deployed AI/ML models to enhance predictive analytics, optimize decision-making processes, and drive operational efficiency, resulting in improved user engagement and business outcomes.
- Skilled in implementing monitoring and logging solutions using tools such as Prometheus, Grafana, and ELK stack (Elasticsearch, Logstash, Kibana) to ensure application performance, system reliability, and proactive issue resolution.
- Hosted and tested applications using AWS services (EC2, Lambda, S3), enhancing deployment strategies and providing hands-on DevOps support.
- Collaborated with cross-functional teams to architect and implement scalable solutions, while mentoring junior developers and driving product quality improvements through container orchestration and comprehensive code reviews.

Senior Full Stack Engineer – Capital One

Mar 2017 – Dec 2022

Dallas, TX

- Designed and built scalable financial web applications using Python (Django/Flask), Node.js (Express.js) for the backend, along with React for frontend development, optimizing performance and delivering responsive solutions.
- Managed relational (PostgreSQL, MySQL) and NoSQL (MongoDB) databases, optimizing queries and creating robust data models to enhance performance.
- Focused on optimizing application performance using caching solutions such as Redis and Memcached, alongside comprehensive Python profiling and performance tuning.
- Led the migration of legacy systems to a microservices-based architecture using Python and Flask, streamlining performance, scalability, and system reliability.
- Integrated Apache Kafka for real-time messaging and event-driven architecture, enabling robust communication between Python microservices with fault tolerance.
- Leveraged AWS services (EC2, RDS, Elastic Beanstalk, Lambda) for cloud-based application deployment and infrastructure management.
- Collaborated with cross-functional teams to streamline project execution, ensuring timely and successful deployments in a mission-critical industry.

Back End Developer – Kaplan

Jan 2015 – Jan 2017

Arlington, TX

- Built and deployed Python-based backend applications using Flask for RESTful API development, improving client-side interaction speed by 35%.
- Wrote clean, maintainable, and scalable Python code for integration with various internal and third-party systems.

- Assisted in the development of automated test suites using Pytest and Selenium, ensuring 90% test coverage for backend services.
- Enhanced SQL database performance by writing optimized queries and stored procedures in MySQL.
- Supported ongoing deployment activities and performance monitoring tasks, including the integration of new features and improvements.
- Participated in sprint planning and backlog grooming sessions, delivering user stories in an Agile development environment.

EDUCATION

Texas State University — Bachelor's degree in Computer Science

2010 - 2014

Round Rock, TX

TECHNICAL SKILLS

Languages: Python (Flask, Django), JavaScript (ES6+), TypeScript, HTML5, CSS3, Node.js

Frameworks/Libraries: Django, Flask, FastAPI, React, Angular, Celery, asyncio, NumPy, Pandas

Tools: Docker, Kubernetes, Git, GitHub, Bitbucket, Jenkins, Circle CI, Jira, Apache Kafka, Restful APIs, GraphQL, ELK stack (Elasticsearch, Logstash, Kibana)

Databases: MySQL, PostgreSQL, MongoDB, Redis, Memcached

Cloud Services: AWS (EC2, S3, Lambda, RDS, SNS, Elastic Beanstalk), GCP (Compute Engine, Kubernetes Engine, Apigee, Pub/Sub), Azure

Testing & CI/CD: PyTest, Mock, JUnit, Jest, Jasmine, Cypress, Git, Jenkins

Soft Skills: communication skills, problem solving & adaptability, leadership & mentoring, attention to detail, time management & organization, team player, continuous learning, decision making, documentation & presentation
