

Krishna Kakani
+1 443-920-0272
Krishn.kakani@gmail.com

Professional Summary:

- Experienced **Java Developer** with over 7 years of expertise in designing, architecting, and developing robust business and technical solutions for prominent corporations.
- Adept **Java programmer** with a strong grasp of Object-Oriented Programming, Collections, Exceptions Handling, Input/output (I/O) System, Annotations, Concurrency, Multi-Threading, Lambda and Generics.
- Skilled software engineer with expertise in **Python** and Java, specializing in scalable application development, data pipeline automation, and cloud-integrated solutions to deliver efficient, high-performance results.
- Skilled in crafting web-based applications utilizing **Java/J2EE technologies**, including JSP, JSF, jQuery, **JavaScript**, HTML5, CSS, XML, Ajax and JMS.
- Proficient in utilizing modern frameworks and libraries for User interface design like Angular, React, Bootstrap, Typescript.
- Excelled in **Java 8**, adeptly implementing features such as Lambda Expressions, Streams, and the Java Time API to elevate application functionality.
- Profound understanding of the **Java Virtual Machine (JVM)** architecture, memory management, and execution of Java applications.
- Proficient with **AWS services** like S3, Lambda, SNS, SQS, Event Bridge, IAM, Glue, Athena and Sage Maker for ML applications
- Good experience in implementing various modules of Spring framework like Spring IOC, Spring MVC, Spring Batch, Spring ORM, Transaction Management, Spring Security and Spring Boot, Spring Data.
- Expertise in implementing persistence logic using JDBC, **JPA**, **Spring JDBC**, **Hibernate** framework.
- Experience building event driven architecture leveraging Active MQ and **Kafka**.
- Extensively worked on **Microservices using Spring Boot**, Spring Data and REST
- Expertise in implementing Service Oriented Architecture by using **RESTful web services**.
- Architected and implemented robust logging solutions, leveraging technologies such as ELK Stack (Elasticsearch, Logstash, Kibana) and **Splunk**.
- Designed and implemented scalable monitoring systems using tools like **Dynatrace**, Prometheus, and Grafana to track key performance indicators and system metrics.
- Experienced in using profiling tools like Visual and **Java Mission Control** to analyze and optimize Java applications.
- Proficient in designing and implementing high-performance communication between microservices using gRPC, leveraging its protocol buffers for efficient serialization and deserialization.
- Worked with Jersey API to implement **RESTful web services**, strong knowledge on JAXRS.
- Recognized for guiding teams on cloud best practices, ensuring secure, scalable, fault-tolerant, and high-performing applications.
- Proficient in architecting and scaling large-scale microservices through the adept utilization of diverse paradigms.
- Proficient in guiding large scale cloud application native application development and integration with PaaS, SaaS paradigms.
- Experienced working in **DevOps/Agile** environments and ensuring effective code reviews, unit test automation, build and production deployments that include compiling, packaging, deploying and application configurations.
- Experience building **CI/CD pipelines** using AWS Code pipeline, Jenkins and GitHub actions.

- Proficient in **Oracle Database**, with extensive experience in database design, **SQL**, **PL/SQL**, and performance tuning. Successfully managed and maintained complex database systems, ensuring data integrity and optimal query performance.

TECHNICAL SKILLS:

Build Tools	Maven, Gradle, Ant.
Programming Languages	Java 11, J2EE, Python, C++, TypeScript, Python, Scala, Spring Framework, Angular, gRPC, GraphQL
Scripting Languages	JavaScript, Node.js, ReactJS, UNIX Shell Scripting, Bash, YAML
Middleware	ActiveMQ, MuleSoft iPaaS, AWS SQS
Containers	Docker, RedHat OpenShift, Kubernetes
Issue Tracking	JIRA, ServiceNow
Infrastructure as Code Tools	AWS Cloud formation, AWS CDK, Terraform, BOTO 3
Database	Oracle, MySQL, MS SQL Server, PostgreSQL, NoSQL, DynamoDB, MongoDB, SQLite
Version Control System	GitHub, Code Commit, SVN
CI Tools	Jenkins, Bamboo, Azure DevOps
Operating System	Windows Variants, Linux, UNIX.
Cloud	AWS, Azure, Google Cloud Platform (GCP)

Professional Experience:

Client: T-Mobile, Overland Park, KS

July 2023 - Till Date

Role: Sr. Java Full Stack Developer

Responsibilities:

- Actively participated in Agile/Scrum processes to drive software development with a focus on continuous delivery and iterative improvements.
- Designed and developed modern, responsive web interfaces using HTML5, CSS3, Bootstrap, JavaScript, React.js, jQuery, Ajax, and JSON, adhering to web accessibility standards.
- Built dynamic, single-page applications and responsive web applications using Angular 9, enhancing user experience across devices.
- Consumed server-side SOAP web services and integrated them into Angular 8 controllers to streamline backend communication.
- Developed Angular 8 applications, focusing on MVC architecture, custom directives, filters, and reusable components for better scalability and maintainability.
- Integrated AWS services, leveraging Amazon S3 for scalable object storage and efficient file management, ensuring smooth data upload and retrieval.
- Designed and implemented a scalable NoSQL database solution using Amazon DynamoDB, optimizing performance for high-volume, low-latency data operations.
- Architected microservices using Spring Boot, deploying them on AWS Elastic Kubernetes Service (EKS) to create scalable and efficient cloud-native applications.
- Utilized AWS Simple Queue Service (SQS) for asynchronous messaging and AWS Lambda for serverless event-driven processing to optimize real-time data handling.
- Developed reusable Angular components, custom modules, services, and pipes to ensure clean and maintainable code.
- Implemented advanced Angular 9 features like interpolation, input binding, event binding, router outlets, and lifecycle hooks for a seamless user experience.
- Designed and developed responsive user interfaces and mobile-first designs using Adobe XD, ensuring modern aesthetics and user-centered designs.

- Applied core Java concepts such as Multithreading, Collections, I/O, Generics, and Exception Handling to meet complex business requirements.
- Contributed to design systems using Figma and Adobe XD, helping standardize components and assets across multiple projects for improved consistency and speed in product design.
- Managed the migration of Java codebase from Java 1.8 to Java 11+, ensuring improved performance and taking advantage of the latest features.
- Automated data processing and ETL workflows using Python, significantly enhancing efficiency and reducing manual processing efforts.
- Optimized database performance by tuning SQL queries and managing schema migrations for SQLite databases, enhancing application responsiveness.
- Integrated SQLite for local data storage, enabling offline capabilities and smooth synchronization with remote databases when available.
- Utilized Python libraries like Pandas and NumPy for data analysis and Matplotlib for creating insightful visualizations to support decision-making.
- Developed RESTful APIs using Flask and FastAPI, ensuring smooth integration with front-end services and handling requests with fast response times.
- Implemented robust error handling, logging, and data validation mechanisms in Python scripts to ensure reliable operations.
- Leveraged Python's asynchronous capabilities for handling real-time data tasks, using tools like Celery and Redis to optimize task scheduling and message queuing.
- Optimized computationally intensive tasks in Python using multithreading and multiprocessing, significantly reducing processing times for large-scale operations.
- Ensured seamless integration between Java applications and AWS services like Amazon RDS, DynamoDB, and S3 for high-performance data storage and analytics.
- Developed and maintained RESTful APIs using Spring Cloud, managing API gateways via AWS API Gateway to ensure secure, efficient communication between services.
- Employed Java 11 features like Lambdas, Streams, Completable Futures, and Observables to optimize code readability and performance.
- Applied Microservice architecture using Spring Boot to modularize the codebase and implemented REST APIs for efficient service communication.
- Utilized Java 1.8 features, including Parallel Streams, Lambdas, and functional interfaces, to improve development efficiency and performance.
- Integrated Spring MVC components with business services to create efficient and maintainable software solutions.
- Developed RESTful web services using Spring Boot and integrated them with front-end applications via Spring Rest Controllers to manage JSON communication.

Environment: AngularJS, Eclipse, Python, IntelliJ, Java, Spring Boot, AWS (EC2, S3, DynamoDB, Lambda, SQS, API Gateway), Kafka, Bootstrap, XML, WSDL, JavaScript, GIT, Maven, Postman, Swagger, Adobe XD, Agile, Jenkins, JUnit, REST API, SOAPUI.

Client: State of New Jersey, NJ

Jan 2023 – May 2023

Role: Lead Java Full Stack Developer

Responsibilities:

- Spring beans were used for controlling the flow between UI and Hibernate.
- Implemented the authentication of the application using Spring Security and OAuth2.0.
- Developed Web Services using XML messages that are used SOAP.
- Responsible for Continuous Integration (CI) and Continuous Delivery (CD) process implementation using Jenkins along with UNIX Shell scripts to automate routine jobs.

- Created and configured the continuous delivery pipelines for deploying microservices and lambda functions using Jenkins CI server.
- Deployed Spring Boot, Spring Cloud based microservice Docker Container using Amazon EC2 Container Services using AWS Admin Console.
- Developing scripts for build, deployment, maintenance and related tasks using Jenkins, Docker. • Developed AWS S3 to copy project artifacts into S3 bucket.
- Wrote some Python scripts to manage AWS cloud formation templates to automate installation of auto scaling, AWS cloud (EC2, S3, Lambda).
- Manipulated data using CRUD operations of MongoDB database management system and handled database access using NodeJS registry.
- Designed and developed custom SQL queries in SQLite to extract, aggregate, and manipulate data for reporting and analysis, improving decision-making capabilities for internal stakeholders.
- Automated data migration processes from SQLite to larger database systems, such as PostgreSQL or MySQL, for applications requiring more complex data models and higher scalability.
- Used Jenkins and pipelines to drive all Microservice authentication builds out to the Docker.
- Logging and monitoring with ELK stack.
- Integrated SonarQube with Jenkins for continuous inspection of code quality and analysis with SonarQube scanner for Maven.
- Developed JUnit test cases to improve code coverage.
- Worked with GCP for cloud management services.
- Experience working with Sabre App architecture for configuration management and session management etc.

Environment: Java 1.8/11, Spring MVC, Spring Boot, Spring Security, Microservices, Kafka, AWS, Jenkins, Angular8/9, JIRA, Hibernate, MongoDB, MySQL, SQL, Restful, HTML5, CSS3, Node.js, GIT, JBOSS, JavaScript, XML, SOAP, JUnit, PCF, Kubernetes, Maven, SonarQube, Jenkins, Agile.

Client: Vodafone, Hyderabad, India

Sep 2017 – Dec 2021

Role: Java Developer

Responsibilities:

- Spearheaded the complete Software Development Life Cycle (SDLC), including System Architecture design and development of System Use Cases based on functional requirements.
- Developed responsive views using HTML, CSS, and Angular JS components within the Bootstrap framework.
- Utilized JSP, HTML5, CSS3, and JavaScript for constructing dynamic web pages, playing a key role in the presentation layer of the application.
- Developed and maintained several high-performance Angular 11 applications, enhancing user interfaces and application functionality.
- Implemented reusable components and services, optimizing code for scalability and maintainability.
- Migrated legacy Angular applications to Angular 11, significantly improving performance and maintainability.
- Utilized RxJS for efficient state management and handling of asynchronous operations.
- Integrated NgRx for complex state management, ensuring a predictable state across the application.
- Developed hybrid mobile platform for automotive applications using JavaScript and React Native, resulting in 88% code share between iOS and Android while reducing development time by 33%.
- Developed and maintained high-performance Java applications, leveraging Java 1.8 features for improved efficiency and readability.
- Implemented **lambda expressions** and the **Stream API** to process collections efficiently, resulting in a 20% reduction in code complexity and execution time.
- Utilized **functional interfaces** to create cleaner and more concise code.

- Designed and developed RESTful APIs, ensuring seamless integration with front-end applications and third-party services.
- Enhanced application performance by optimizing multithreaded processes using Java 1.8's concurrency utilities.
- Developed and maintained robust unit tests using JUnit and Mockito, achieving over 90% code coverage.
- Implemented the new **Date and Time API** for more accurate and reliable date and time operations.
- Integrated Grunt tasks for code quality tools, enforcing coding standards and improving overall codebase.
- Designed RESTful APIs using Swagger, defining endpoints, data models, and maintaining consistent conventions for clarity and maintainability.
- Implemented agent-server messaging dialog using Rabbit MQ.
- Implemented OAuth2 and JWT for secure authentication and authorization between microservices.
- Used Mongo DB for data storage and aspects like replica sets, Sharding, and clever document design.
- Developed Merge jobs in Python for data extraction and loading into MySQL database.
- Tested web services using POSTMAN.
- Implemented Microservices architecture using Spring Boot for application modularity and independence.

Environment: JAVA 8, J2EE, HTML5, CSS3, AWS, AZURE, jQuery, Ajax, Angular 11, Node.js, J2EE, Spring MVC 4.2, Hibernate 4.0, Micro Services, Web services, Restful, Kafka, Web Sphere, Agile, Splunk, Maven, JIRA, Swagger, MongoDB

Client: HSBC, Hyderabad, India

Jan 2016 – Aug 2017

Role: Java Developer

Responsibilities:

- Involved in all software development life cycle phases (SDLC) using Agile Methodology.
- Developed Use Case Diagrams, Object Diagrams, and Class Diagrams in UML using Rational Rose.
- Involved in developing User Interface (UI) with Angular 11, CSS3, JavaScript, POJO, jQuery, and JSON.
- Developed user interface using JSP, JSP Tag libraries, and JavaScript to simplify the complexities of the application.
- Leveraged core JAVA concepts like Collections Framework, Multi-Threading, and Exception handling for developing application modules.
- Extensively used the latest Java8 features like Functional Interfaces, Stream API, Time API, Transaction Management, Exception Handling, Collection API, and Lambda Expressions.
- Used Angular 11 created custom directives for data manipulations and to display data in company standard format in UI.
- Implemented SEO strategies to optimize website visibility and ranking on search engine results pages (SERPs), driving organic traffic and enhancing online presence.
- Conducted keyword research, analyzed search trends, and implemented on-page and off-page SEO techniques to improve website ranking and increase inbound traffic.
- Skilled in integrating Bower with build tools like Grunt or Gulp to automate the process of fetching and including front-end dependencies, streamlining the development workflow.
- Implemented routing logic and navigation from screen to screen and implemented login functionality on the client side in **Angular 11**.
- Built RESTful APIs with Play Framework, ensuring adherence to REST principles and compatibility with client applications.
- Implemented asynchronous and non-blocking I/O operations using Scala Futures and Akka Streams for responsive and reactive applications.
- Integrated with relational and NoSQL databases like PostgreSQL and MongoDB, optimizing data access and storage.

- Implemented automated testing strategies using ScalaTest and Specs2, ensuring robustness and reliability of the codebase.
- Utilized GraphQL subscriptions to enable real-time updates for critical application events, enhancing user engagement and experience.
- Integrated machine learning models into Java-based applications for real-world use cases.
- Deployed models using Java technologies, ensuring scalability and efficiency.
- Conducted thorough model evaluation using cross-validation techniques and performance metrics.
- Implemented hyperparameter tuning and optimization strategies in Java for improved model accuracy.
- Developed Merge jobs in Python to extract and load data into MySQL database.
- Microservices have been built using Spring Boot, and Spring Cloud and deployed to AWS Cloud.
- Migrating existing applications into microservices architecture using Rest APIs, Spring Boot, Spring Cloud, and AWS (EC2, S3, Lambda).

Environment: Java, J2EE, Hibernate, PL/SQL, Spring Batch, Spring web services, Spring Boot, MAVEN, Oracle, Jenkins, CSS, Log4j, jQuery, UML, Netflix Eureka, JUnit, Angular 11, GitHub, TDD, Groovy, Kafka, Microservices, Maven, Node JS, Visual Studio Code, Eclipse, Docker, Kubernetes, JUnit, PCF.

Client: Bosch Global Software Technologies, Bangalore, India

Nov 2014 – Dec 2015

Role: Java/J2EE Developer

Responsibilities:

- Involved in various phases of Software Development Life Cycle (SDLC) of the application like Requirement gathering, Design, Analysis and Code development.
- Implemented MVC architecture and DAO design pattern for maximum abstraction of the application and code reusability.
- Developed web application using JSP custom tag libraries, Spring Action classes and Action. Designed Java Servlets and Objects using J2EE standards.
- Configured the application using Spring framework annotations and developed Spring Controllers for request and response processing and implemented Restful Web Service.
- Migrated Spring based application to cloud based Micro services.
- Designed and developed the REST based Micro services using the Spring Boot, Spring Data with JPA.
- Participated in coding Spring AOP components for the Transactional Model to handle many requests.
- Involved in developing Java APIs, which communicates with the JavaBeans.
- Implemented Java/J2EE Design patterns like Business Delegate and Data Transfer Object (DTO), Data Access Object.
- Involved in Unit, Integration and Performance Testing for the new enhancements.
- Developed the application using Java Beans, Servlets and EJB's.

Environment: Java, J2EE, Spring, Hibernate, HTML, JSP, JavaScript, jQuery, XML, JSON, CSS, Angular.js, Ajax, Log4j, Hibernate 3.5, Bootstrap, Apache Tomcat 7, Rest Web Services, Spring boot, JUnit, Maven, Oracle.

EDUCATION:

- Bachelor of Technology in Electronics and Communication Engineering from JNTU Hyderabad, India - 2015.
- Master's in computer science from University of Central Missouri, USA- 2023.
