

Kyle Gardner

Sr Full Stack .NET Engineer

✉ kylegardy@hotmail.com ➤ Miami, FL

PROFILE

Results-oriented Senior Full-Stack Engineer with 12+ years of experience delivering **secure, scalable, and cloud-ready** software using **C#, .NET (Core & Framework)**, and modern frontend frameworks like **Angular** and **React**. Adept at building **microservices**, integrating **enterprise systems**, and optimizing **backend performance** across **AWS** and **Azure** cloud platforms. Proven track record supporting regulated domains such as **healthcare, real estate, and government services**, with a deep understanding of **HIPAA, SOC 2, and NIST 800-53** compliance standards. Experienced in **containerization, CI/CD automation, and REST/gRPC API** design, with a passion for **clean architecture** and **developer productivity**, committed to **continuous learning, effective cross-team collaboration**, and mentoring junior engineers in **fast-paced, mission-critical** environments.

EDUCATION

Bachelor of Science in Computer Science

Sep 2009 – May 2013 | Kennesaw, GA, USA

Kennesaw State University

SKILLS

Category	Technologies & Tools
Programming Languages	C# (.NET 6/7/8), JavaScript (ES6+), TypeScript, Python (3.4+)
Frameworks & Libraries	ASP.NET Core, Entity Framework Core, Blazor, Angular (15+), React (17), MediatR, SignalR, Dapper, NgRx, RxJS, Redux, Zustand
Frontend Technologies	HTML5, CSS3, Sass, Razor Pages, Angular Material, Chart.js, Bootstrap, Tailwind CSS, Material UI
Cloud Platforms	Azure (AKS, App Service, Functions, Service Bus, B2C, CosmosDB, Event Grid), AWS (S3, RDS, Lambda, ECS, DynamoDB, CloudFormation, IAM, CodePipeline), GCP (Firestore, Cloud Functions, Dataflow)
Microservices & APIs	RESTful APIs, gRPC, Event-Driven Architecture, Kafka, RabbitMQ, API Gateway, OAuth 2.0, JWT, Azure API Management, MassTransit
AI & Machine Learning	Scikit-learn, TensorFlow, LLM integration (OpenAI GPT APIs), prompt engineering, NLP pipelines, anomaly detection, document intelligence,
Containerization & DevOps	Docker, Kubernetes, Helm, Terraform, Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps Pipelines
Database & Caching	SQL Server, PostgreSQL, Oracle, MySQL, MongoDB, Redis, CosmosDB
Monitoring & Logging	Serilog, Seq, Prometheus, Grafana, ELK Stack, AWS CloudWatch, Azure Monitor, Application Insights
Testing & QA	xUnit, NUnit, Moq, Cypress, Selenium, Mocha, Unit Testing, Integration Testing
Security & Compliance	OAuth 2.0, JWT, RBAC, AES-256, SSL/TLS, HIPAA, FISMA, NIST 800-53, SOC 2
Project & Sprint Tools	Jira, Azure Boards, Confluence, Trello, Git, GitHub, GitLab, Bitbucket
CI/CD & Automation	Azure DevOps, Jenkins, GitHub Actions, AWS CodePipeline, Terraform, Bash

PROFESSIONAL EXPERIENCE

Senior / Lead .NET Engineer

Acentra Health (formerly CNSI)

June 2017 – Present | McLean, VA (Remote)

Project: Florida Medicaid Provider Portal Modernization (FMMIS to FX Transition)

Contributed to the modernization of Florida's Medicaid Provider Portal (FLMMIS) for the **Agency for Health Care Administration (AHCA)**, used by 100,000+ providers to enroll, submit claims, and manage access to the Medicaid system. Replaced legacy infrastructure with **cloud-native**, compliant, and **responsive services** that aligned with **CMS's FX modular vision**.

Key Contributions Overview

- **Modernized Legacy Architecture:** Migrated ASP.NET Web Forms and .NET Framework codebase to .NET 6/7, improving maintainability and throughput across claims, eligibility, and credentialing modules.
- **Built Secure APIs:** Developed JWT-secured REST APIs supporting claims submission, provider onboarding, and CMS service integration with resilient retry logic.
- **Redesigned Frontend:** Delivered Angular 10+ and React SPA with mobile responsiveness, inline validation, and accessibility compliance, reducing provider onboarding errors.
- **Python/AI Integration:** Partnered with AHCA data teams to embed Python-based NLP services for extracting structured data from provider documents, cutting manual review workload.
- **Cloud & DevOps Enablement:** Established Azure DevOps pipelines, Azure AD B2C authentication, and HIPAA-compliant deployments on Azure App Services/Blob Storage.
- **Cross-Agency Collaboration:** Coordinated with AHCA IT, CMS working groups, and vendors to ensure FX compliance and modular integration.

Backend Systems & API Development

- **Built Secure REST APIs for Medicaid Services:** Designed JWT-secured REST APIs using ASP.NET Core to facilitate provider search, eligibility lookup, and claims tracking. Integrated CMS NPPES and other state services with robust retry and fallback logic.
- **Refactored Claims Processing Logic:** Migrated procedural business logic from legacy services into optimized SQL stored procedures and .NET background workers. Achieved a 40% reduction in claim validation response times under peak load.
- **Implemented Custom Middleware Pipeline:** Built middleware components to handle input validation, request logging, structured error responses, and rate limiting across sensitive endpoints.
- **Standardized Service Integration Patterns:** Created shared utilities for wrapping API responses, consistent error handling, and input schemas, improving developer velocity and reducing QA defects in new feature development.

Frontend Engineering & User Experience

- **Rewrote Provider UIs with Angular 10+:** Replaced static Web Forms with Angular modules for multi-step forms, provider status dashboards, and document workflows. Included inline validation, conditional display logic, and ARIA-compliant controls.
- **Enhanced Accessibility and Responsiveness:** Complied with WCAG 2.1 accessibility guidelines using Angular Material, semantic HTML, and screen-reader support. Ensured compatibility with mobile/tablet devices, critical for rural provider access.

- **Built Admin Dashboards for State Use:** Developed React dashboards for AHCA users to review applications, manage credentialing states, and trigger compliance workflows. Included sortable tables, audit logs, and secure route guards.
- **Shared Angular/React Libraries:** Created reusable components in Angular and React, for alerts, modals, upload widgets, and input validators. Ensured consistency across teams and reduced code duplication.

Cloud Infrastructure & DevOps

- **Set Up CI/CD with Azure DevOps:** Authored YAML-based CI/CD pipelines covering build, test, security scan, and staged deployment. Enabled rollback triggers and email alerts for failed builds.
- **Provisioned Azure App Services & Storage:** Used Azure App Services for hosting Angular and .NET apps. Managed document uploads via Azure Blob Storage with SAS token support and scanning integrations.
- **Implemented Azure AD B2C Login:** Integrated self-service authentication flows using Azure AD B2C. Configured policies for account recovery, MFA, and token lifetime management.
- **Configured Monitoring with App Insights:** Connected Angular and .NET services to Application Insights for live usage tracking, performance bottleneck identification, and error diagnostics.

AI & Machine Learning Contributions

- **Fraud/Anomaly Detection:** Supported AHCA analytics teams by integrating outputs from Python scikit-learn models that flagged anomalous claims, improving oversight and reducing false payments.
- **Document Intelligence:** Developed APIs to consume NLP outputs (spaCy) that auto-tagged provider credentialing documents, streamlining intake and reducing manual errors.

Compliance, Security & Monitoring

- **Designed RBAC & Audit Logging:** Developed claims-based access control and injected context-aware user roles into API responses and frontend logic. Logged sensitive actions with audit trails for CMS review.
- **Supported FISMA & NIST 800-53 Reviews:** Participated in quarterly risk assessments with InfoSec. Resolved penetration test findings and implemented security headers, HTTPS enforcement, and encryption policies.
- **Secured Document Upload Pipelines:** Validated file type, scanned for viruses, and stored provider-submitted documents using expiring SAS links and encrypted Blob containers.

Emergency Projects & FX Program Alignment

- **COVID Provider Response Module:** Built and deployed a standalone Angular web form during the COVID-19 public health emergency. Enabled temporary and telehealth providers to self-register under accelerated workflows.
- **Participated in CMS FX Design Reviews:** Represented engineering in modularity and interoperability discussions to ensure alignment with future plug-and-play components like eligibility and prior authorization modules.
- **Contributed to Vendor RFPs:** Supported AHCA in reviewing technical responses from FX-aligned vendors, validating integration feasibility, and system architecture compliance.

Mentorship & Leadership

- **Mentored Junior Engineers in .NET & DevOps:** Led code reviews, architecture walkthroughs, and DevOps bootcamps for new hires. Focused on secure coding, reusable components, and pipeline authoring.
- **Led Sprint Reviews and Stakeholder Demos:** Facilitated Agile ceremonies, presented sprint demos to AHCA stakeholders, and documented acceptance criteria for QA teams.
- **Authored Internal Documentation:** Produced system architecture diagrams, onboarding guides, API documentation, and shared infrastructure checklists to accelerate team ramp-up.
- **Aligned Delivery with Policy Changes:** Interpreted CMS policy changes alongside AHCA project managers and adjusted release timelines accordingly, ensuring legal and operational compliance.

Full Stack .NET Engineer/Cloud Engineer

RealPage

Dec 2014 – May 2017 | Richardson, TX (Hybrid)

Project: Property Management SaaS Platform

Joined the core application team responsible for RealPage's **leasing**, **billing**, and **maintenance** modules. Contributed to **backend** and **frontend** features supporting **real estate** operators and **tenants** across the U.S.

- **Built .NET Microservices for Leasing Operations:** Helped decompose a legacy C# monolith into modular microservices for lease generation, unit availability, and contract workflows. Led backend implementation and testing for two production services.
- **Delivered Angular-Based Leasing Interfaces:** Created user-facing components like unit search, lease preview, and calendar view using Angular and Bootstrap. Connected UI to real-time APIs for dynamic data rendering.
- **Implemented Tenant Notifications (Email/SMS):** Developed backend services using .NET to send automated messages for approvals, move-ins, and maintenance alerts. Integrated SendGrid and Twilio with reusable logic.
- **Refactored Rent Ledger and Billing Logic:** Rewrote legacy billing calculations in modern C#, adding unit tests for prorated charges, multi-unit rollups, and late fee edge cases. Improved accuracy across billing cycles.
- **Optimized SQL Server for Reporting:** Partnered with DBAs to enhance stored procedures powering rent roll and occupancy dashboards. Deployed indexes and caching strategies to reduce query latency by 40%.
- **Maintained CI/CD Pipelines with TeamCity:** Contributed to shared CI pipelines for backend services, managing build triggers, test execution, and artifact deployments with consistent versioning practices.
- **Added Role-Based Access Controls (RBAC):** Implemented middleware and token-based UI controls using JWT to enforce RBAC policies for finance, leasing, and maintenance user types.
- **Developed Live Maintenance Dashboard:** Built a real-time request board for property techs using SignalR and Redis Pub/Sub. Improved visibility into issue status and reduced tenant wait times.
- **Supported Cloud Deployment to AWS:** Contributed to migration efforts by containerizing services for ECS, integrating CloudWatch for log monitoring, and applying IAM-based environment access via Parameter Store.
- **Wrote Technical Documentation and API References:** Authored onboarding guides, API reference docs, and usage examples for internal developers and external partners.

Full Stack Developer

Microsoft

Jun 2013 – Dec 2014 | Atlanta, GA (Onsite)

Project: Azure Active Directory B2C Developer Experience

Contributed to **Microsoft's Azure Identity team**, focused on enhancing the developer experience for **B2C** tenants and public **SDKs**. Supported integration of **OAuth2** and **OpenID** Connect into **.NET** products and web applications.

- **Enhanced .NET SDK for Identity Flows:** Worked on the Microsoft Authentication Library (MSAL) by improving error reporting, token cache handling, and sample app integration across .NET and Xamarin SDKs.
- **Built Developer Onboarding Portal Features:** Implemented front-end onboarding components inside the Azure Portal using AngularJS and TypeScript. Helped reduce support tickets by simplifying setup flows for new tenants.
- **Created Sample Applications in .NET Core:** Developed and maintained authentication-focused demo apps for ASP.NET Core and WPF, which were adopted as part of Microsoft Learn and partner enablement.
- **Improved DevOps for SDK Releases:** Helped automate release workflows for MSAL .NET packages with Azure DevOps and GitHub, streamlining CI for public SDK pushes to NuGet.
