Professional Summary:

SAP Basis Consultant with Over 6.8 Years of Experience

- Over 6.8 years of experience as an SAP Basis Consultant specializing in SAP system administration, installation, configuration, migration and upgrades across complex SAP landscapes, with extensive knowledge of SAP S/4 HANA, SAP Enterprise Core Component (ECC), Business Intelligence (BI), Fiori, SLD, Process Integration (XI), SAP CRM, SAP SRM, Web Dispatcher, CUA, SAP JVM and Solution Manager, and Cloud environments.
- Comprehensive SAP ERP skills including EHP 8.0, EHP 7.0, NetWeaver 7.4, NetWeaver 7.5, and S/4 HANA versions 1909, 2020, 2023 with proficiency in SAP HANA Database, Oracle, and DB2 on Windows and Linux platforms.
- Conducted full installations of SAP ECC 6.0, NetWeaver 7.4, 7.5, and SAP HANA 1909, leveraging Software Provisioning Manager (SWPM) tool; completed SAP HANA XSA and SAP HANA Web IDE installations to extend system functionality.
- Performed system refreshes for SAP landscapes, ensuring accurate and timely copies of productive environments to non-production systems (QA, Development, or Sandbox).
- Performed NetWeaver and EHP SP level upgrades via SUM tool, managed multiple SAP product upgrades, and executed HANA database upgrades using HDBLCM tools for enhanced system performance and version control.
- System monitoring expert, managing system health checks, performance tuning, system profile parameters, and background job optimization to ensure seamless operation across environments.
- User authorization expertise including creation and maintenance of user accounts, role assignments, and resolution of authorization issues using PFCG; designed custom roles aligned with business needs.
- Skilled in client administration with experience in client creation, import/export, local and remote client copies, ensuring efficient client management in multi-system SAP landscapes.
- Transport management specialist configuring TMS, creating RFC connections, and managing transport requests and quality assurance imports to streamline development and production cycles.
- Proven ability in SAP patch management, including downloading and applying support packages, conducting Kernel upgrades, and ensuring system stability through regular patch updates.
- Extensive spool administration, setting up printers, output devices, and managing spool requests to support uninterrupted printing operations.
- Database administration skills encompassing database performance monitoring, free space checks, data file management, and segment optimization to maintain database health.
- SAP license management experience applying licenses via SAP Service Marketplace and SLICENSE transactions; conducted profile maintenance with parameter adjustments to optimize system performance.
- Daily technical operations include log analysis, system user monitoring, ABAP dump analysis, lock entry review, background job reviews, and comprehensive system checks for proactive issue resolution.
- Delivered technology solutions with clear communication, providing business and technical perspectives, and presenting pros and cons for recommended approaches.

Technical Skills:

Core Competencies: SAP IMPLEMENTATION, SAP SUPPORT, SAP SECURITY

SAP ERP Skills: EHP 8.0, EHP 7.0, NetWeaver 7.4, 7.5, S/4 Hana 1909, 2020, 2023

Cloud Environment: Microsoft Azure

Ticketing Tools: ServiceNow, ChaRM, BMC Remedy

Database: SAP HANA Database, Oracle, SQL, DB2

Operating Systems: Windows, Unix, Linux

Key Contributions:

SAP Basis Skill Set

Installation:

- Performed installations of SAP ECC 6.0, NetWeaver 7.4, NetWeaver 7.5, and SAP HANA 1909 using the Software Provisioning Manager (SWPM) tool.
- Installed SAP HANA Extended Services Advanced (XSA) and SAP HANA Web IDE.

Upgrades:

- Conducted NetWeaver and EHP (Enhancement Package) support package (SP) level and release upgrades using the Software Update Manager (SUM) tool.
- Upgraded various SAP product versions, including performing several add-on installations with SUM.
- Performed HANA DB upgrades using the Hana Database LifeCycle Management tools (HDBLCM tools).

SAP System Refresh (System Copy/Cloning):

- Performed system refreshes for SAP landscapes, ensuring accurate and timely copies of productive environments to non-production systems (QA, Development, or Sandbox).
- Managed database export/import, system copy, and reorganization of transport directories to ensure smooth data migration during system refreshes.
- Coordinated SAP System Refresh processes in accordance with project timelines and environment specifications, ensuring minimal downtime and effective configuration management.

System Monitoring:

- Performed system health checks, including monitoring system performance and resource utilization.
- Managed system profile parameters and operation modes for optimal performance.
- Monitored and managed background jobs to ensure smooth system operation.

User Authorization:

- Created and maintained user accounts, assigned roles, and managed authorizations using transaction PFCG.
- Resolved missing authorizations by assigning required authorization objects.
- Created various roles and assigned them to users as per business requirements.

Client Administration:

- Performed client creation, export & import, local client copy, and remote client copy tasks for effective client management across SAP landscapes.

Transport Management:

- Configured Transport Management System (TMS), including creating RFC connections, logical systems, and transport routes.
- Managed package creation created and released transport requests and imported transports into quality assurance and production systems.

User Administration:

- Managed user administration tasks, including creating and managing users, assigning licenses, resetting passwords, locking/unlocking users, and deleting or copying user accounts.
- Registered new users with SAP and ensured accurate role assignment.

Patch Management:

- Downloaded and applied support packages from the SAP Service Marketplace.
- Conducted Kernel upgrades and applied patches to maintain system stability.

Spool Administration:

- Configured printers and created output devices.
- Maintained the spool database and managed spool requests to ensure smooth printing operations.

Database Administration:

- Monitored database performance, checked free space, and added data files to tablespaces when necessary.
- Managed database segments and monitored space consumption for optimal performance.

SAP License Management:

- Applied SAP licenses via the SAP Service Marketplace and the SLICENSE transaction.

Profile Maintenance:

- Modified instance profiles by adding or changing profile parameters.
- Activated, checked, and compared profiles to maintain system performance and compliance.

Professional Experience:**Senior SAP Basis Consultant**

Client: Quadrant (United States)

Duration: Oct 2024 - Present

Project Type: SAP S/4 HANA upgrade Project

Roles and Responsibilities:

- Involved in the SAP S/4HANA upgrade project from version 1809 to 2023, ensuring minimal downtime and seamless transition.
- Managed pre-upgrade analysis, system preparation, execution, and post-upgrade validation to enhance system performance, security, and compatibility with new business functionalities.
- Conducted system readiness checks using Maintenance Planner, SUM, and SI Check tools.
- Performed SAP Readiness Check 2.0 to identify custom code adjustments and simplification items.
- Executed the upgrade using Software Update Manager (SUM) in downtime-optimized mode.
- Managed backup and recovery strategy for SAP HANA database and application servers.
- Resolved upgrade-related issues, including kernel patching, database compatibility, and missing dependencies.
- Monitored upgrade phases in SUM logs (/SUM/abap/log/) and resolved errors promptly.
- Conducted extensive testing (UAT, performance, regression testing) to ensure system stability.
- Adjusted authorizations and security roles for new SAP Fiori apps and upgraded functionality.
- Coordinated with functional teams (FI, MM, SD, PP, IBP) to resolve post-upgrade application issues.
- Fine-tuned SAP HANA parameters and optimized system performance post-upgrade.
- Successfully completed the upgrade with 99.9% system availability post-upgrade.
- Reduced downtime by 30% using SUM downtime-optimized mode.
- Improved system performance by 25% with optimized HANA memory management.
- Ensured smooth business continuity by proactively resolving simplification issues.

Senior SAP Basis Consultant, IBM

Client: Rosneft Oil & Gas, Germany

Duration: Sep 2023 - Sep 2024

Project Type: Upgrade Project

Roles & Responsibilities:

- Conducted comprehensive system readiness assessments, including hardware, OS, and database compatibility for S/4 HANA upgrades.
- Developed detailed roadmaps and timelines for upgrade, ensuring alignment with business requirements and minimizing risks.
- Evaluated the current system landscape, including hardware, OS, and database compatibility for the 2023 version.
- Used SAP Readiness Check to analyze custom code, add-ons, and system components.
- Performed pre-upgrade activities such as SAP Kernel upgrades, database client updates, and full system backup including database and application servers, to ensure recovery in case of failures.
- Utilized SAP Maintenance Planner to verify system compatibility and generate upgrade stack XML file, which includes required software components, add-ons, and patches.

- Analyzed custom developments using ABAP Test Cockpit (ATC) and remediated incompatible code.
- Executed SAP S/4 HANA upgrade using the Software Update Manager (SUM) tool.
- Monitored upgrade phases, addressed errors, and ensured successful completion of pre-processing, execution and post-processing steps.
- Minimized system downtime by leveraging Downtime-Optimized SUM (DMO) methodologies during upgrade execution.
- Upgraded the HANA database to the required version and performed consistency checks to ensure data integrity.
- Optimized database performance post-upgrade by implementing best practices for HANA.
- Conducted post-upgrade validation to ensure functionality of key transactions, programs, and integrations. Performed system performance tuning, resolved bottlenecks, and enhanced overall efficiency.
- Supported end users and functional teams during User Acceptance Testing (UAT), resolving technical issues promptly.
- Provided hyper care support post-go-live, ensuring system stabilization and smooth business operations.
- Documented upgrade processes, configurations, and troubleshooting steps for future reference.

SAP Basis Consultant, IBM

Client: Maersk

Duration: Jan 2023- Sep 2023

Project Type: SAP Support

Roles and Responsibilities:

- Performed system upgrades, release version updates, using the SUM Tool.
- Developed backup and recovery strategies to safeguard critical SAP data and operations.
- Performed performance tuning and optimization, ensuring high system availability and responsiveness.
- Conducted SAP HANA administration, implementing health checks and tuning improvements.
- Monitored and maintained SAP environments (Sandbox, Development, QA, and Production), proactively resolving performance issues.
- Administered SAP Solution Manager to optimize system monitoring and address connectivity challenges.
- Developed and implemented high-availability and disaster recovery strategies for critical SAP systems.
- Performed SAP system refreshes (from PRD to Sandbox, Replica, and QA systems) and handled client management activities such as creation, copies, exports, and deletions.
- Executed HANA client and HANA database upgrades using HDBLCM (HANA Database Lifecycle Manager), ensuring seamless version transitions.
- Created and configured SAP clients, establishing logical systems to ensure accurate data exchanges between clients and other SAP systems.
- Performed local and remote client copies for replicating configurations and data across different clients.
- Handled client export and import for transferring client-specific data between different SAP instances or environments.
- Monitored and tracked project deliverables, ensuring tasks were completed on time and aligned with project scope and goals.
- Imported transport requests to move development objects and customizations between SAP environments, such as development to quality assurance or production systems.
- Configured all types of RFC (Remote Function Call) connections, enabling communication between SAP systems or external applications.
- Worked on incident resolution as per the SLA timelines.
- Leveraged SAP Solution Manager to automate system monitoring, improve incident management, and ensure timely resolution of critical issues.

SAP Basis Consultant, IBM India

Client: L'Oréal Paris

Duration: Jun 2022- Dec 2022

Roles and Responsibilities:

- Regularly monitor system health, resource usage, and overall performance for both local and global environments.

- Overseeing both physical and virtual servers, ensuring optimal operation and addressing any performance issues.
- Implementing and managing system backups, ensuring data is properly backed up and can be recovered in case of failure.
- Applying necessary patches and updates to servers and systems to maintain security and performance standards.
- Managing databases, including routine backups, tuning for performance, and resolving access issues.
- Administering user access rights, ensuring users have the appropriate permissions based on their roles and responsibilities.
- Applied SAP Support packages, add-on installations using SPAM/SAINT tools, performed kernel, JVM, hostagent upgrades.
- Performed system refreshes using backup/restore method and post-refresh activities.
- Conducting regular system and security audits to ensure compliance with organizational policies and standards.
- Streamlined project timelines by implementing structured monitoring practices, ensuring 100% on-time delivery of SAP-related milestones.
- Responding to and resolving incidents related to system performance, server outages, or security breaches.
- Diagnosing and addressing system issues, errors, and service interruptions promptly to minimize downtime.
- Keeping records of system configurations, processes, root cause analysis, and troubleshooting guides up to date for reference.
- Scripting and automating regular system maintenance tasks such as backups, updates, and monitoring.
- Configuring systems for high availability and load balancing to prevent service interruptions.

SAP Basis Consultant, IBM India

Client: Pitney Bowes

Duration: Aug 2021 - Jun 2022

Roles and Responsibilities:

- Monitored local and global work process overviews, ensuring optimal system performance and identifying potential issues related to SAP processes.
- Applied Kernel upgrades and support pack stack upgrades for ABAP and JAVA stacks.
- Configuration of TMS, SLD, applying OSS Notes, performance tuning, printer configuration.
- Monitored active and inactive servers, proactively managing system availability and addressing server performance or connectivity issues.
- Analysed system locks and system logs, identifying root causes of system bottlenecks or malfunctions to maintain smooth operation and data consistency.
- Scheduled and managed standard background jobs, ensuring the efficient execution of routine tasks such as data archiving, backups, and system cleanups.
- Maintained users locally and globally, managing user roles, authorizations, and ensuring proper access rights across distributed SAP environments.
- Monitored system updates and managed update administration, ensuring timely application of patches and system upgrades to maintain system security and stability.
- Configured operation modes, optimizing resource allocation between dialog and background processing to enhance system performance during peak usage.
- Monitored system usage trends to predict future resource requirements, allowing for proactive capacity planning and system scaling.
- Enforced organizational security measures by implementing firewalls, anti-virus software, encryption protocols, and other security best practices to protect against threats.
- Diagnosed and addressed system issues, errors, and service interruptions, ensuring minimal downtime and prompt restoration of services.
- Maintained up-to-date records of system configurations, processes, and troubleshooting guides, ensuring easy reference for future maintenance or issue resolution.
- Scripted and automated regular system maintenance tasks, including backups, updates, and monitoring, to enhance system efficiency and reduce manual intervention.
- Coordinated with third-party vendors for software, hardware, and support services, ensuring seamless integration and support for the SAP landscape.
- Configured systems for high availability and load balancing, ensuring system reliability, minimizing service

interruptions, and optimizing system performance during peak loads.

SAP Basis Consultant, Infosys

Client: JGS Philippines

Duration: Jul 2018- Aug 2021

Roles and Responsibilities:

- Monitored local and global work processes to ensure the efficient operation of SAP systems by analyzing performance metrics and resolving any bottlenecks.
- Monitored active and inactive servers, ensuring optimal system availability and proactively addressing server downtime or performance issues.
- Analyzed system locks and system logs to identify potential issues, maintain system integrity, and resolve conflicts that could lead to system malfunctions.
- Scheduled and managed standard background jobs, ensuring critical system tasks and maintenance routines were executed efficiently and on schedule.
- Maintained users both locally and globally, managing authorizations and ensuring consistent user access across multiple SAP systems.
- Monitored system updates and managed update administration, ensuring that all patches and updates were properly applied and verified for effectiveness.
- Configured operation modes, optimizing system performance by adjusting the distribution of resources between dialog and background processes based on workload.
- Handled spool administration, managing print queues, resolving spool-related issues, and ensuring the successful printing of documents from SAP systems.
- Created system messages to inform users of critical system events, planned maintenance, or outages, enhancing communication within the user base.
- Analyzed and maintained default, instance, and startup profiles to ensure system configurations were aligned with performance and operational requirements.
- Troubleshoot daily startup issues, diagnosing and resolving technical issues that could impact system availability and performance.
- Collaborated effectively with cross-functional teams and stakeholders, utilizing strong verbal communication skills to drive alignment and resolve issues.
- Performed system monitoring using a comprehensive checklist, ensuring that all aspects of system health and performance were regularly checked and maintained.

Certifications:

- SAP Certified Technology Associate – SAP HANA 2.0 SPS05
- Microsoft Certified : Azure Fundamentals

Academic Qualifications:

Bachelor of Technology in Sir C.R.Reddy College of Engineering, India | 2018
