Professional Summary:

IT professional with over 7 years of experience in managing and provisioning cloud services for application development across **Amazon Web Services (AWS)**, **Microsoft Azure**, and **Google Cloud Platform (GCP)**. Skilled in designing, implementing, and automating comprehensive Continuous Integration, Delivery, and Deployment pipelines and processes.

- Highly skilled **IT** professional with extensive knowledge of the **Software Development Life Cycle (SDLC)**, including requirement analysis, design, coding, and testing of enterprise applications. Proficient in employing standard methodologies such as **Agile, Scrum, Waterfall, and Kanban**, ensuring timely delivery.
- Expert in utilizing a wide range of **AWS services**, including **EC2, S3, VPC, CloudFormation, ALB, ELB**, Auto Scaling, and CloudWatch metrics integration. Highly adept at efficiently integrating bare-metal solutions into diverse, scalable, and secure virtualized hosting environments to ensure seamless operations.
- Implemented and maintained **ELB** and **ALB** to ensure high availability, scalability, robust performance, **cost-efficiency**, and efficient network traffic distribution while effectively eliminating single points of failure.
- Experienced in provisioning **EC2** instances, configuring **IAM** roles and security groups, and efficiently managing databases using **S3, DynamoDB, PostgreSQL, MariaDB, MySQL**, and Elasticsearch solutions **for scalability**.
- Specialized in implementing serverless architectures using **API Gateway** and **AWS Lambda**, deploying Lambda code from S3 buckets, and creating Lambda deployment functions triggered by S3 events **for automation**.
- Proficient in **Azure** PaaS solutions like **Azure Web Apps**, Redis Cache, Application Insights, **Azure Functions**, **Azure Stream Analytics**, **Azure SQL**, and **Azure Storage**. Experienced with **Azure IaaS services**, including **virtual machines (VMs)**, **VNet**, load balancing, setting up Availability Sets, and monitoring performance.
- Skilled in creating ARM templates for provisioning **VMs, VNets**, Subnets, and implementing robust security measures using Security Center, Active Directory, Multi-factor Authentication, and compliance policies.
- Experienced with **GCP** services such as Compute Engine, **Cloud Load Balancing**, **Cloud Storage**, **Cloud SQL**, **Stack Driver**, **Cloud Deployment Manager**, **GKE**, **GCR**, **Pub/Sub**, and **Cloud Dataflow**.
- Used Google Stackdriver for monitoring the logs of both **GKE** and **GCP** instances, and configured alerts from Stackdriver. Also, set up VPN and configured Network Access for firewalls, routing, network tags, security compliance, and efficient traffic management **while ensuring reliability** for migrating Google Compute Engines.
- Set up auto scaling of the instance group for **DEV/QA** environments using **GCP CLI** and **GCP** cloud environments and provided proof of concept (POC) on creating serverless architecture with GCP for efficiency.
- Developed and implemented Infrastructure as Code (IaC) solutions using **Terraform** to automate provisioning, configuration, and management of staging and production environments. This included defining reusable modules, managing state files, ensuring consistency, scalability, and compliance with organizational standards.
- Proficient in **Docker**, with expertise in utilizing **Docker Engine**, **Docker Hub**, **Docker Machine**, **Docker Compose**, and **Docker Registry** to streamline the management of containerized applications.
- Successfully managed multiple container images for installations, configurations, and deployments, ensuring efficient resource utilization, consistency across environments, scalability, and optimal performance.
- **Kubernetes** expert in automating deployment, scaling, and cluster operations. Skilled in managing clusters, pods, services, and deployments, with experience using ArgoCD for manifest synchronization and reducing drift.
- I Have experience in packaging, versioning, and automating deployments with **Helm** to simplify Kubernetes workload management, upgrades, rollbacks, templating, configuration, monitoring, security, and debugging.
- I Have worked with **OpenShift** by deploying and managing containerized applications using OpenShift clusters, automating workflows, monitoring, security, networking, CI/CD, logging, troubleshooting, and optimization.
- Developed **Ansible** playbooks to automate build and deployment processes, reducing processing time, efficiently managing configurations, provisioning servers, and ensuring consistency across environments.
- Highly skilled in automating server setup, application deployment with **Puppet**, including configuring Puppet masters, clients, ensuring system consistency, managing infrastructure as code, and optimizing configurations.
- Developed build scripts using **Maven** and **Gradle** integrated with **Jenkins** to streamline artifact creation, environment transitions, version control integration, testing automation, continuous delivery, and deployment.

- Leveraged **Nexus** and **Artifactory** for efficient repository management, ensuring reliable storage, versioning, distribution of artifacts, security, access control, collaboration, and integration across development teams.
- Proficient in monitoring tools such as **CloudWatch**, **Splunk**, **Nagios**, **AppDynamics**, **Datadog**, **Prometheus**, and **Dynatrace** for comprehensive resource, environment monitoring, and performance analysis.
- Configured and optimized **Splunk** to monitor and analyze application logs, server metrics, and infrastructure performance in real-time. Developed customized dashboards, detailed reports, automated alerts, and proactive troubleshooting mechanisms to provide actionable insights, enabling proactive issue identification and resolution.
- Developed programmatic **CRUD** operations using **JDBC**, **pyodbc**, and **ORM** tools like **Hibernate** for various databases, including **PostgreSQL**, **Oracle**, **MongoDB**, **MS SQL**, and **MySQL** efficiently, seamlessly, and securely.
- Utilized **mCollective** to remotely execute **SQL** clients such as **OEM** and **SQL Plus**, creating APIs to automate database operations and process large data documents efficiently, improving system performance.
- Seamlessly integrates **Kafka** with **Pub/Sub**, **Dataflow**, **Dataproc**, and **BigQuery** for real-time analytics and batch processing. Builds real-time applications using **Kafka Streams** and **KSQL** for filtering, and aggregating data.
- Experience with bug tracking tools such as **JIRA**, **Remedy**, **Bugzilla**, and **ClearQuest** for managing defects. Configured workflows and utilized **Test Director** for tracking and resolution **to enhance** efficiency
- Implemented and managed Continuous Integration and automation for builds and deployments using **Jenkins**, **GitLab CI**, **GitHub Actions**, and **Bamboo**. Set up pipeline jobs tailored for various test environments and configured Jenkins to automate builds and deployments to CI Dev Servers efficiently **with minimal downtime**.
- Set up repositories like **SVN**, **GitHub**, **Bitbucket** for build and release management activities like Merging, Branching, Tagging, and managed Jenkins plug-ins for automatic code checkout and continuous integration.
- Skilled with **Python**, **Bash/Shell**, **PowerShell**, **Ruby**, **Perl**, **JSON**, **YAML**, **Groovy**. Developed **Shell** and **Python** scripts to automate administrative tasks and build/release processes.

Technical Skills

Cloud Platforms	AWS, Azure, GCP
AWS	EC2, S3, Database Services, IAM, VPC, EBS, AMI, Lambda, SQS, SNS, ELB, Networking Services, CloudWatch, etc.
Azure	VM, VNets, AD, ARM, Application Insights, Azure Functions, App Services, Security Centre, Azure SQL, Azure Monitor, etc.
GCP	Compute Engine, Cloud SQL, BigQuery, IAM, Cloud Deployment Manager, Cloud Function, GKE, GCR, etc.
Containers management	Docker, Kubernetes, Docker Swarm, OpenShift
Messaging	RabbitMQ, Apache Kafka
Build/ Configuration Tools	Maven, Gradle, Ant, Ansible, Chef, Puppet
CI/CD Automation Tools	Jenkins, Bamboo, GitLab CI, Circle CI
Monitoring Tools	Splunk, Nagios, AppDynamics, Dynatrace, ELK, Prometheus
Virtualization Tools	Oracle VM Virtual Box, Vagrant, VMware
Versioning Tools	Git, GitHub, Subversion (SVN), Bitbucket, GitLab
DBMS	MySQL, Oracle, SQL Server, RDBMS
Web Server	Apache, Tomcat, WebLogic, WebSphere, Nginx
Languages	Python, Java, Shell Script, C, PowerShell, Groovy,
Bug Tracking	JIRA, Remedy, ClearQuest, Bugzilla

Work Experience:

Sr. Cloud DevOps Engineer

Date: Feb 2024 - present

CarMax, Virginia, United States

Description: CarMax is a leading used vehicle retailer in the United States, specializing in marketing pre-owned vehicles. Sr. Cloud DevOps Engineer, I am responsible for migrating the infrastructure and web applications to multi-cloud environments and managing the cloud infrastructure in maintaining the system implementation process along with building pipelines for automated build and deployments, application containerization and monitoring the infrastructure and applications.

Responsibilities:

- Managed Amazon **EC2** instances with Linux/Ubuntu **AMIs**, configuring and launching instances for specific applications efficiently and effectively. Configured **AWS** services like **EC2**, **ELB**, **ECS**, **S3**, **Elastic Beanstalk**, **ELK Stack**, **CloudFront**, **EFS**, **RDS**, **DynamoDB**, **VPC**, **Route 53**, **SNS**, **SQS**, **CloudWatch**, **CloudTrail**, **CloudFormation**, and **IAM** for seamless migrations, optimization, monitoring, and advanced troubleshooting.
- Implemented **AWS** Identity and IAM with multi-layer authentication, creating groups, users, and policies using the policy generator, defining permissions based on requirements, and ensuring secure access controls.
- Deployed and managed applications using **AWS** Elastic Beanstalk, efficiently orchestrating the underlying infrastructure required to run, scale, monitor, optimize, automate deployments, and ensure security seamlessly.
- Developed **AWS** Lambda functions in **Python** to perform complex data transformations and advanced analytics on large datasets within **EMR** clusters effectively, securely, efficiently, and with optimized performance.
- Integrated Snowflake cloud data warehouse with **AWS S3** for seamlessly processing data from multiple sources, including nested JSON data loading into Snowflake tables efficiently, ensuring scalability and data integrity.
- Designed and implemented a **secure and scalable** GCP architecture that met specific performance, availability, regulatory requirements, leveraging services such as **Compute Engine**, **GKE**, **Cloud SQL**, and **Cloud Storage**.
- Implemented **GCP networking principles** and designed complex network architectures using Virtual Private Cloud (**VPC**), **subnets**, **load balancers**, and **firewalls** to ensure secure and high-performing systems.
- Designed custom **GCP IAM** and access control policies, and implemented security controls such as encryption, key management, monitoring, and compliance to meet industry standards and regulatory requirements.
- Design and implement data pipelines using **GCP** services such as Dataflow, Pub/Sub, Cloud Storage, and BigQuery. Optimize data processing and storage with tools like Cloud SQL, Cloud Bigtable, and Cloud Spanner. Automate data workflows and **ETL** processes using Cloud Composer and Cloud Functions for scalability.
- Deployed containerized applications on **GKE**, using **YAML** manifests, Helm charts, and **Kubernetes** APIs. Also used Kubernetes to orchestrate containerized applications and services, including scaling, rolling updates, load balancing, monitoring, security, and using **Kubernetes deployments**, services, and ingress resources.
- Converted CloudFormation templates into **Terraform** for infrastructure as code. Used **Terraform** for network issue identification, resource provisioning, comprehensive dependency mapping, and environment automation.
- Automated **Docker** image creation for microservices using the **Docker Maven** plugin and **Dockerfiles**. Built and optimized **Jenkins** pipelines for containerized application builds and deployment to **Kubernetes** pods.
- Implemented **CI/CD** pipelines in **Jenkins** by integrating tools like **Git**, **Maven**, **SonarQube**, and **Nexus**. Used **Jenkins** to automate builds, deployments, validations, test execution, code QA, and environment provisioning.
- Reviewed code with SonarQube to identify and resolve violations. Managed **CI/CD** builds in **Jenkins**, deployment processes, improving collaboration across teams, and ensuring code quality and consistency.
- Leveraged **Kubernetes** to deploy, scale, load balance, and manage **Docker** containers in production environments. Designed systems using **Kubernetes** orchestration for scalability and reliability.
- Installed and configured Grafana for data visualization and Apache **Kafka** for message brokering in a clustered environment, ensuring high availability, fault tolerance, real-time data processing, and seamless integration.
- Written **Ansible playbooks** to automate the **build and deployment process** on servers using SSH connections and reduce the overall processing time and managed **Ansible Playbooks** with **Ansible modules**.
- Extensive experience in ETL and BI testing, including extracting, transforming, and loading data into SQL Server databases using Informatica PowerCenter, ensuring data accuracy and performance optimization.
- Developed **Python** scripts for automating **AWS** services and enhancing operational efficiency. Designed and implemented APIs and web services in Python for reporting, data analysis, automation, and system integrations.
- Created REST APIs and user models for applications using **Python** OOP, list comprehension, and error handling. Used Postman for API testing and implemented web services using Grails and Groovy.

- Configured and managed Amazon RDS **MySQL** for database administration tasks and set up **DynamoDB** to support **NoSQL** data for teams using lightweight Docker containers integrated with Elasticsearch for rapid indexing, search capabilities, efficient data retrieval, scalability, security, and improved performance.
- Worked extensively with database frameworks such as In-Memory Redis using **AWS** ElastiCache, NoSQL solutions like Datastax Cassandra-Solr, **AWS** CloudSearch, and **MongoDB**, tailoring implementations based on specific data characteristics, application needs, scalability, security, and performance requirements.
- Developed Shell and **Python** scripts to execute Oracle **RDBMS** functions, including bulk data loading and processing. Created custom scripts for automation, repository monitoring, and storage management.
- Leveraged **Datadog** for monitoring and performance optimization, setting up dashboards, alerts, metrics, log management, anomaly detection, and real-time insights to ensure application and infrastructure stability.
- Utilized ServiceNow (**SNOW**) for incident and change management, creating and tracking tickets, automating workflows, improving collaboration, enhancing reporting, and ensuring timely resolution of issues.
- Worked with **JIRA** for ticketing and defect tracking, configuring workflows, automating toolchains, and implementing customizations and plugins to enhance collaboration and optimize the bug/issue tracking process.

Environment: AWS, GCP, Terraform, CloudFormation, Docker, Kubernetes, Jenkins, Maven, Nexus, Nagios, Jira, BigQuery, Shell, Python, Apache, Datadog, SNOW, JBoss, Nginx, Tomcat, Java, Groovy, GIT, Bitbucket, Service now, Cassandra, Kafka, MySQL, RDS, DynamoDB, MongoDB, SVN etc.

DevOps /Cloud Engineer
Verizon, Irvine, California.

Date: July 2023 - Feb 2024

Description: Verizon is an American multinational telecommunications conglomerate and a corporate company. I am responsible for the migration of infrastructure from On-premise to the **AWS** and **Azure Cloud Platforms**. As a cloud engineer, I am responsible for creating the infrastructure, managing build and deployment pipelines, Configuration management and Orchestration of Web/Application Servers.

Responsibilities:

- Proficient in a range of **Azure services**, including Compute, Caching, **Azure SQL**, **NoSQL**, Storage, Networking, Active Directory, API Management, Scheduling, Auto Scaling, Automation, Security, Monitoring, and **DevOps**.
- Configured **Azure** VMs in availability sets using ARM templates to ensure resiliency for IaaS-based solutions. Managed scale sets with ARM for efficient network traffic handling, automated scaling, and high availability.
- Designed **ARM** templates to deploy **SQL** Server with high availability for backend infrastructure, Virtual Machine Scale Sets for front-end operations, alongside servers for automation, and performance optimization.
- Automated manual administrative tasks and cloud deployments by scripting, debugging, and optimizing PowerShell scripts to improve efficiency, reduce errors, enhance automation, security, and streamline workflows.
- Implemented performance monitoring for **Azure** resources using native monitoring tools and ARM templates. Deployed **Azure** IaaS VMs and PaaS cloud services in secure **VNets** and subnets, leveraging on-demand compute, storage, and networking resources, ensuring scalability, and optimizing cost efficiency and performance.
- Configured and managed various **AWS IaaS** offerings including **EC2 instance** creations using **AMIs** in a **VPC**, **RDS**, **S3 buckets**, **Glacier**, **CloudWatch**, **CloudTrail**, **CloudFront**, **SQS**, **SNS**, and **Route 53**.
- Designed roles and policies for new users using **AWS Identity and Access Management (IAM)** and utilized special Security groups, IAM roles and edited policies for Dev and Prod users to manage access to resources.
- Designed **AWS CloudFormation** templates to create custom **VPC**, set **IAM** policies for users, subnets, Security groups, **NAT** to ensure successful deployment of Web applications and assigned **AWS elastic IP addresses** to work around host or availability zone failures by quickly re-mapping the address to another running instance.
- Evaluated strategies to migrate Client Aging Legacy Applications to Cloud Native Platform using Strangler pattern and Anti-Corruption layer patterns and established Cloud migration plan for AWS for cost optimization.
- Implement **Replatform migration strategy** to migrate applications from on premise infrastructure to AWS using **AWS Server Migration Service**, created **CloudFormation** templates for provisioning of the resources.
- Designed, built, and managed clusters/workloads on **Kubernetes (Kops)**, Amazon **EKS**, **ECS**, and **AWS Fargate**. Created image templates for EKS clusters and **Docker** images using **Terraform** for automation and efficiency.
- Deployed containerized applications on Kubernetes clusters managed by Amazon EKS and used CloudFormation templates to launch clusters of worker nodes on EC2 instances, automating scaling and management.

- Created CloudWatch alerts for instances and used them in Auto Scaling launch configurations. Set up alarms in CloudWatch for monitoring server performance, CPU utilization, disk usage, and maintained user accounts, IAM, RDS, and Route53 services in **AWS cloud**, ensuring security, availability, and compliance with best practices.
- Created **Dockerfiles** to build, push, and run container images. Developed custom scripts to implement scaling functionality for **Docker** containers by analyzing metrics and triggering scaling operations.
- Gained extensive experience with **Docker** components, including Docker Engine, **Docker Hub**, Docker Machine, and Docker Compose. Utilized Vagrant for consistent infrastructure setups and automation efficiency.
- Set up and managed **Jenkins** as a CI tool with master and multiple slave configurations, ensuring seamless continuous development and deployment **workflows**. Configured and secured **CI/CD** tools like **Jenkins** and Bamboo for automated build, delivery, deployment processes, and version control integration.
- Created and managed repositories, branches, pull requests, and issues using **GitHub** and collaborated with remote teams, contributed to open-source projects, and ensured version control best practices for collaboration.
- Developed ETL packages and reports following best practices, including requirements gathering, design, development, code reviews, unit testing, and deployment. Automated SQL Agent for ETL packages and scripts.
- Managed infrastructure as code (IaCs) using **Terraform** in **GCP** and **AWS** cloud platforms, wrote **Python** scripts to support new functionality in **Terraform** to provision highly available, scalable, secure, and resilient infrastructure, and set up build and deployment automation for Terraform scripts using Jenkins for automation
- Designed and developed microservices using Spring Boot with a focus on RESTful APIs. Integrated Spring Data JPA and implemented business logic in the DAO layer using annotations and custom queries.
- Used **AppDynamics** to capture **thread snapshots** and CPU samples to study the application behavior under load and to uncover any **CPU intensive** method calls along with waiting or blocked thread and established Health rules to gather the **health status** of an entity by defining levels of performance based on **metrics** in **AppDynamics**.
- Installed, configured, and maintained the network servers DNS, NIS, NFS, Sendmail, and application server Apache Tomcat, WebSphere, JBOSS, WebLogic, Oracle E-business suite, and Samba on Linux for performance.
- Expertise in build deployment, build scripts, and automated solutions using scripting languages such as Shell, Perl, **Python**, and Scripted in Groovy to automate and collect analysis of Cassandra for scalability and efficiency.
- Expertise in build deployment, build scripts, and automated solutions using scripting languages such as Shell, Perl, **Python**, and Scripted in Groovy to automate and collect analysis of Cassandra for scalability and efficiency.
- Experienced in using **Ansible** to manage web applications, databases, commands, users mount , and packages. Implemented **Ansible** to manage all existing servers and **automate the configuration of new servers**.
- Developed build and deployment scripts using **Maven** and **Gradle** as a build tool in **Jenkins** to move from one environment to other environments and automated builds using **Maven** for the creation of build **artifacts**.
- Responsible for designing and deploying new **ELK clusters** **Elasticsearch**, **logstash**, **Kibana**, **beats**, **Kafka**, **zookeeper** etc. while using **Elasticsearch** for Search and using **ELK stack** for logging and monitoring.
- Worked on **build deployment**, **build scripts** and **automated** solutions using **scripting languages** such as **Shell**, **Perl**, **Python** and Scripted in **Groovy** to automate and collect analysis of various **DevOps** tools.
- Deployed and configured **JIRA**, both hosted and local instances for **issue tracking**, **workflow collaboration**, and **tool-chain automation** and Used Kafka to collect Website activity and Stream processing.

Environment: Azure, AWS, Terraform, Kubernetes, Docker, Jenkins, Ansible, Maven, Jfrog, GIT, Splunk, Python, Java, Bash scripts, SonarQube, Linux, Apache Tomcat, WebSphere, Jira etc.

Medtronic's Ltd, Hyderabad, India
DevOps Engineer

Date: Dec 2019 - Nov 2022

Description: Medtronic is a global leader in medical technology, services, and solutions. It focuses on developing and manufacturing innovative medical devices, therapies, and software solutions to address a wide range of health conditions. I was responsible for the build and automation process for continuous deployment, maintain web server and building software with open-source components and dependencies

Responsibilities:

- Designed and implemented **AWS** solutions using **EC2**, **S3**, **EBS**, **ELB**, **ALB**, **VPC**, **RDS**, CloudFormation, SQS, SNS, and various other services, ensuring performance, reliability, security, scalability, and cost-efficiency.
- Contributed to the migration from physical servers and on-premises databases to **AWS** by leveraging Database Migration Service (DMS), Server Migration Service (SMS), and additional cloud technologies.
- Developed and maintained a robust JavaScript API with Express.js to enable seamless integration and reliable data transmission for a high-traffic e-commerce platform, including RESTful endpoints, middleware functions, and security measures for handling requests, implementing business logic, and interacting with the backend.

- Designed **Azure** Virtual Networks, implemented Point-to-Site VPNs, VNet Peering, and Network Security Groups (NSG), and developed ARM templates deployed via **Azure** DevOps to provision **Azure** infrastructure.
- Configured Azure Cosmos DB triggers in Azure Functions to efficiently detect and process changes in Cosmos DB containers and dynamically generated insightful reports by pulling data from SQL tables to Azure SQL Database.
- Created CloudWatch alerts for EC2 instances, integrating them with Auto Scaling launch configurations, and set up alarms in CloudWatch for monitoring. Managed **IAM** users, RDS, and Route 53 services in **AWS**.
- Developed and maintained custom npm packages and private registries to efficiently share reusable code components and enforce consistent versioning practices across multiple development teams for collaboration.
- Built **Docker** images and authored optimized **Dockerfiles** to automate various developer tasks, efficiently managed Docker container snapshots, removed unused images, and streamlined Docker volume management processes.
- Implemented **Kubernetes** for deploying, scaling, load balancing, and managing containers across multiple namespaces, creating a highly available, fault-tolerant production-ready **Kubernetes** infrastructure.
- Automated development and deployment tasks by writing Python, Bash, and Shell scripts, maintained **Python** deployment scripts for WebSphere servers, and created automation scripts for routine jobs.

Environment: AWS, Azure, Docker, Kubernetes, Git, GitHub, Maven, Jenkins, Chef, Nexus, Splunk, Tomcat, Python, Shell, Bash, et

Havells India limited, Hyderabad.

Date: Jun 2017 - Nov 2019

Build and Release Engineer (Linux)

Description: Havells India limited is a hardware company that manufactures and sells products to customers. As a Build and Release engineer, I am involved in managing and creating web applications. Used Jenkins to implement the CI process and integrated the tool with Ant and Maven to schedule the builds.

Responsibilities:

- Implemented **Jenkins** pipelines and seamlessly integrated them with **AWS** pipelines to automate microservices builds, deployments, versioning, and storage to **Docker** registries across multiple cloud-based environments.
- Developed and executed comprehensive Software Release Management strategies for various applications using **Agile methodologies**, ensuring smooth, efficient, timely, and high-quality software delivery processes.
- Leveraged **Git** for version control and developed robust build and deployment scripts using **Maven** and **ANT**, seamlessly integrating them into **Jenkins** for automated **CI/CD** workflows across multiple environments.
- Automated infrastructure provisioning and configuration management processes using Puppet, Chef cookbooks, and recipes to support highly scalable and consistent deployment workflows across diverse environments.
- Managed and administered **Linux** systems (RHEL 4.x, 5.x, 6.x) for development, QA, staging, and production environments, including system optimization, security hardening, troubleshooting, and performance monitoring.
- Deployed, upgraded, and proactively maintained middleware applications such as Apache, MySQL, and PHP, ensuring high availability, scalability, security, and optimal performance across all environments.
- Leveraged **AWS** services such as EC2, S3, RDS, and **EKS** for efficient provisioning, storage optimization, monitoring, backups, disaster recovery, security, automation, and deploying scalable containerized applications.
- Provisioned, updated, and patched VMware ESX environments, performing capacity planning, monitoring performance, and identifying servers suitable for efficient virtualization and resource optimization.
- Configured core **Linux** services including **DNS**, **FTP**, **SMTP**, **HTTP/HTTPS**, and PXE boot, while managing iptables for IPv4 packet filtering, ensuring security, reliability, and optimal network performance.
- Conducted kernel updates, RPM upgrades, SAN disk setup, HBA driver configuration, LVM management, system patching, performance tuning, troubleshooting, and system monitoring for complex RHEL environments.
- Deployed and monitored system performance using tools like Datadog, AppDynamics, and ELK stack for efficient logging, real-time analysis, troubleshooting, optimizing system reliability, uptime, and overall performance.
- **Built Docker** images and deployed containerized applications to **AWS EKS** and **ECS** for scalable, resilient, high-performance microservices architecture across multiple cloud-based environments and production workloads.
- Authored **Maven POM files**, managed releases using the **Maven** release plugin, handled artifact storage with **NEXUS** repositories, and optimized build processes for efficient continuous integration pipelines.
- Developed robust automation scripts using **Shell**, **Python**, and **Groovy** for streamlining build processes, automating deployment tasks, enhancing system performance optimizations, and improving operational efficiency.

Environment: MySQL, RHEL 4.x, 5.x, 6.x, Linux/Unix, Red Hat OS, VMware, DNS, FTP, VSFTPD, RPM, LVM, SMTP, IPv4, Apache, ServiceNow (SNOW), HP Service Manager (HPSM), JIRA.
