PH: 980-946-5226

Cyber Security Engineer

PROFESSIONAL SUMMARY

- Professional with 9+ years of extensive experience in the areas of Risk Analysis, SIEM, Endpoint Security, DLP, Network Security, Email Security, Web Gateway, Vulnerability Assessment, Pen testing, Windows Server, Domain technology, and Antivirus servers.
- Expertise in Cyber security & Information Assurance with deep Knowledge of Identity and Access Management security, Sail point Identity IQ, Access Control issues related to cyber systems and networks, AWS Cloud, Penetration testing methodology, malware detection techniques, recommended information assurance policies and standards.
- Expert in Vulnerability Assessment using Qualys, Nessus and Nexpose tools to evaluate attack vectors, identify system vulnerabilities and develop remediation plans and security procedures.
- Strong ability to bridge business and technical requirements, collaborating effectively with business analysts, software testers, and developers to align security solutions with organizational goals.
- Hands-on experience in developing, implementing, and administering information security policies, standards, and procedures, ensuring compliance with industry best practices.
- Assisted in securing corporate IT environments, ensuring adherence to federal regulations and external audit requirements.
- Expertise in gathering and analyzing security metrics, key risk indicators (KRIs), and maintaining scorecards, ensuring the effectiveness and efficiency of the organization's information security
- Excellent knowledge of FISMA, HIPAA and NIST, PIA Compliance usage, rules and regulations.
- Expertise in performing Application Security risk assessments throughout the SDLC cycle.
- Understanding of data integration, network design, and database concepts.

TECHNICAL SKILLS

Continuous Monitoring: Vulnerability Management, Web Application Scanning, Threat Protect, Policy Compliance, Cloud Agents, Asset Management, Governance, Risk Management and Compliance, Source fire, Nexpose, Force point, Rapid7.

Event Management: RSA Archer, Blue Coat Proxy, Splunk, Net Witness, Tenable SC, Log Rhythm, HP Arc sight.

Endpoint Protections: Symantec, McAfee, Bit9, Tanium, CrowdStrike, Cylance, Splunk.

Vulnerability Management McAfee MVM, Tenable Nessus, Tripwire IP360, Rapid7 Nexpose, Qualys, IBM AppScan, HP Web Inspect.

Pen Test Tools: Rapid 7, Burp Suite, Encase, Metasploit, NMAP, Wireshark and Kali.

DLP: McAfee, Symantec, MS Office 365.

Frameworks: NIST SP 800-171, ISO 27001/31000, HIPAA, HITRUST CSF, PCI DSS.

Firewalls: Check Point, ISA 2004/2006, Palo Alto PA 3000/5000.

Routing: OSPF, EIGRP, BGP, RIP-2, PBR, Route Filtering, Redistribution, Summarization, Static Routing.

Switching: VLAN, VTP, STP, PVST+, RPVST+, Inter VLAN routing & Multi-Layer Switching, Multicast operations, Layer3 Switches, Ether channels, Transparent Bridging.

Protocols: TCP/IP, L2TP, PPTP, IPsec, IKE, SSL, SSH, UDP, DHCP, DNS, SSL, TLS.

PROFESSIONAL EXPERIENCE

Sr. Cyber Security Engineer

AIG, Houston, TX

April 2024 to Present

Responsibilities:

- Monitored network security environments using IBM QRadar SIEM, ensuring real-time threat detection and incident response.
- Deployed and managed DLP solutions such as Proofpoint to prevent data loss and unauthorized data access.
- Configured and administered Bluecoat Proxy for web security and content filtering to protect enterprise environments.
- Led vulnerability assessments, penetration testing using Qualys to identify and remediate security gaps.
- Provided encryption and data protection solutions as the primary Voltage secure data encryption engineer, overseeing international encryption projects.
- Developed and implemented security standards and frameworks based on ISO 27001, PCI DSS, NIST, and OWASP to strengthen cybersecurity posture.
- Managed AWS and Azure cloud infrastructure, including IAM, EC2, S3, CloudWatch, and KMS, ensuring cloud security best practices.

- Configured and supported Palo Alto Firewalls and VPN solutions, securing network communications and enforcing access control policies.
- Automated security threat detection and remediation using QRadar, improving SIEM integration with ServiceNow and Active Directory.
- Led cloud security teams, executing compliance assessments and ensuring adherence to cybersecurity policies. Utilized Tenable and Nessus for vulnerability scanning, risk assessments, and false positive validation before remediation.
- Integrated CyberArk for privileged access management, securing sensitive accounts and enforcing access controls.
- Provided technical consulting and compliance assessments for ITIL, COBIT, and ISO 20000 to align IT security with business objectives.
- Developed custom security scripts using Python, PowerShell, and JavaScript for security automation and vulnerability management.
- Conducted forensic investigations and malware analysis, with IDS/IPS, SIEM, and network sniffing tools.
- Ensured SOC operations were aligned with incident response procedures, monitoring threats in a 24x7 security operations center.
- Designed and implemented CI/CD security automation using Jenkins and Linux shell scripting, enhancing continuous security integration.

Cyber/Network Security Engineer

Macy's, New York, NY

September 2021 to March 2024

Responsibilities:

- Interacted with users, engineers, vendors, and IT teams to install, update, and troubleshoot automated systems, ensuring seamless integration and functionality.
- Ensured compliance with cybersecurity standards by developing test routines, monitoring solutions, and conducting penetration testing using Nmap and Wireshark.
- Provided day-to-day support for servers, workstations, and network equipment, documenting technical support procedures for streamlined troubleshooting.
- Led web application security testing and API testing using Postman, ensuring secure authentication and data integrity.
- Installed, configured, and managed IBM Security Identity Manager (ISIM), supporting performance tuning, troubleshooting, and secure authentication.
- Deployed and maintained Palo Alto Firewalls, IPSec VPNs, and network security infrastructure, enhancing enterprise security posture.
- Configured and managed AWS/Azure cloud environments, virtualization platforms (VMware NSX, Hyper-V), and Active Directory/Azure AD for identity security.
- Administered firewalls (Checkpoint, Cisco ASA, Juniper SRX), IDS/IPS, cryptographic systems (RSA, AES), and tokenization technologies for data protection.
- Audited and enforced access control mechanisms, network permissions, and security policies, ensuring compliance with cybersecurity frameworks.
- Designed and optimized enterprise network security architecture, including Cisco routers, switches (Nexus 5K/7K/9K, Catalyst 2960/3560), wireless LAN controllers, and VPN infrastructure.
- Developed automation scripts in Python, PowerShell, and JavaScript to streamline security operations and improve efficiency.
- Conducted compliance assessments aligned with ISO 27001, NIST, PCI DSS, and other cybersecurity standards, ensuring regulatory adherence.
- Researched and implemented emerging security trends, policies, and threat intelligence, enhancing the organization's defense strategy.

Cyber Security Engineer/Analyst

Truist Bank, Charlotte, NC

February 2019 to August 2021

Responsibilities:

- Established and enforced GRC best practices aligned with ISO 27001, PCI DSS, NIST, FedRAMP, and COSO frameworks to ensure compliance and risk mitigation.
- Managed QRadar SIEM for security monitoring, threat detection, log analysis, and automated incident response, improving threat visibility and response time.

- Deployed and maintained McAfee ePO for endpoint security, malware detection, and data loss prevention, ensuring comprehensive protection of enterprise assets.
- Implemented PAN Firewall and CASB (Netskope) for network security, cloud access control, and threat prevention in hybrid environments.
- Conducted vulnerability assessments and penetration testing using Qualys to identify security gaps and develop remediation plans for web and thick-client applications.
- Configured and administered CyberArk for privileged access management, LDAP integration, and multi-factor authentication, enhancing identity security.
- Led SOC operations, managing cyber incidents, forensic investigations, and IDS monitoring, ensuring rapid threat identification and mitigation.
- Facilitated external audits (PCI DSS, NIST) and collaborated with compliance teams to ensure adherence to security policies and regulatory requirements.
- Designed and deployed secure network configurations, VPNs, and MPLS, ensuring secure connectivity and optimized infrastructure performance.

Senior Security Analyst:

Cognizant Technology Solutions (CTS), India

June 2016 to October 2018

Responsibilities

- Designed, developed, and supported highly available PingFederate infrastructure for SSO, SAML, WS-Fed, and WS-Trust federation services.
- Led PingFederate migration and configuration from 7.x to 9.x on Linux servers with custom password policies and authentication schemas.
- Installed and configured PingFederate OpenToken, Agentless Federation (Apache 2.x, IIS 6/7) from scratch.
- Managed IDP & SP SAML certificate generation and updates, ensuring seamless integration.
- Developed certificate-based SSO applications and implemented OAuth configurations for secure API access.
- Expertise in SSL certificate implementation (IIS 5/6/7, Apache 2.x) and custom PingFederate adapters & data source drivers using PingFederate Java SDK.
- Provided high-level support for SSO applications, issued BPIA/PRACS certificates, and maintained PingFederate server logs for Microsoft modern auth development.
- Created onboarding forms for companies and external users using PingFederate 7.3.x – 9.x.
- Offered infrastructure and security recommendations for internal and third-party applications.
- Documented application integrations, installations, and security policies for internal and vendor use.

Security Analyst:

MTouch labs PVT LTD, Hyderabad, India

November 2014 to May 2016

Responsibilities

- Implemented cybersecurity solutions for DHS/FEMA network infrastructure, ensuring secure design, monitoring, and threat mitigation.
- Utilized Sourcefire IDS, ArcSight SIEM, EnCase, Wireshark, and Tenable Security Center for real-time threat detection, forensic analysis, and security monitoring.
- Conducted detailed security event analysis, created Security Event Notification (SEN) tickets, and documented incident response findings.
- Developed and deployed custom Sourcefire IDS signatures to enhance intrusion detection and proactive threat prevention.
- Managed DHS Nessus security scans, performed vulnerability assessments, and analyzed security risks to ensure a hardened infrastructure.
- Researched and remediated emerging threats and vulnerabilities, providing timely patch notifications to DHS components.
- Collaborated with forensic and media analysis teams to combat email phishing campaigns and cyber exploits, enhancing security defenses.
- Monitored and analyzed firewall logs, internet gateways, and Syslog data, ensuring network security compliance.
