

## PROFESSIONAL SUMMARY

- Six years of experience in manual and automated software engineering, specializing in testing web and mobile applications within Agile environments. Proven track record of delivering high-quality software that is scalable, efficient, and meets customer expectations.
- Designed, implemented, and maintained automation frameworks from scratch in the TestNG Framework.
- Hands-on experience in automating tests with Java, Selenium, JUnit, and Appium for both mobile and web applications, with a strong focus on cross-platform testing and performance validation.
- Skilled in using Maven for build management, Git for version control, and Jenkins for CI/CD pipelines, ensuring that code is continuously tested and integrated in a fast-paced development environment.
- Experience in writing and executing unit, functional, and regression tests, ensuring high test coverage and minimizing regressions in production.
- Actively contributed to Agile/Scrum methodologies, participating in sprint planning, daily standups, and retrospectives, ensuring timely delivery of features and resolving blockers through collaboration.
- Strong understanding of the SDLC, STLC, and defect management life cycles, with expertise in bug tracking using JIRA and X-Ray.

## Skills

|                                    |                                                      |
|------------------------------------|------------------------------------------------------|
| Test Approaches                    | Agile/Scrum, Waterfall, SDLC, STLC, Bug Life Cycle,  |
| Testing Tools:                     | Selenium WebDriver, Appium, TestNG, JUnit, Jenkins   |
| Automation Frameworks              | TestNG, BDD Framework, Cross-Platform Mobile Testing |
| Databases                          | SQL                                                  |
| Programming Languages              | Java, C, JavaScript, SQL, HTML                       |
| Version Control                    | Git, Branching & Merging                             |
| Project Management & Collaboration | JIRA, Agile/Scrum                                    |
| CI/CD Tools                        | Jenkins, Maven, CI/CD Pipeline Integration           |
| Defect Tracking & Reporting        | JIRA, X-Ray, HTML Reports                            |

# PROFESSIONAL EXPERIENCE

## Software Engineer | T-Mobile

May 2024 – Feb 2025

- Designed and implemented an end-to-end mobile automation framework for both Android and iOS applications using Appium and TestNG, optimizing cross-platform testing and significantly improving test coverage.
- Developed and maintained large-scale automated test suites, enabling efficient test cycles with parallel execution and prioritization to meet delivery deadlines.
- Integrated automated testing into the CI/CD pipeline with Jenkins, enabling real-time feedback and streamlining the testing process with every code push.
- Created a robust test data management strategy, ensuring accurate and comprehensive coverage across various test environments.
- Automated performance testing for mobile apps, validating key performance metrics such as load time, responsiveness, and resource usage across diverse network conditions.
- Collaborated closely with cross-functional teams, including developers, product managers, and QA engineers, to deliver high-quality features and resolve defects efficiently.
- Utilized Git for version control and collaborated in code reviews to ensure the maintainability and quality of test scripts.
- Developed and executed performance testing for a mobile app, ensuring that it met load time, responsiveness, and memory usage benchmarks across various network conditions.

## Quality Analyst | Cognizant Technologies Solutions

July 2021 - August 2022

- Developed BDD (Behavior-Driven Development) tests using Cucumber, writing behavior and step definitions for Selenium WebDriver tests in Java, leading to more understandable test cases for non-technical stakeholders.
- Automated functional and regression testing using Selenium, JUnit, and Page Object Model, improving the efficiency and reliability of the testing process.
- Wrote and executed SQL queries for back-end testing and data validation, ensuring seamless integration between the front-end and back-end components.
- Managed User Acceptance Testing (UAT), collaborating with business stakeholders to ensure the software met end-user requirements.
- Contributed to the CI/CD pipeline by configuring Jenkins for automated test execution after every code commit, ensuring faster and more reliable deployments.

## **Quality Assurance | Blue Cloud.**

Jan 2017 - July 2021

- Developed and executed manual and automated tests for web and mobile applications, ensuring high-quality releases.
- Participated in code reviews, contributing to the improvement of testability and quality standards.
- Worked on web element locators, enhancing the robustness of automated test scripts and ensuring cross-browser compatibility.
- Created test specifications, test cases, and test scripts to ensure the successful delivery of new Salesforce features.
- Developed automation frameworks with Appium for iOS and Android, significantly reducing manual testing efforts and increasing test coverage.
- Conducted usability testing, accessibility testing, and localization testing, ensuring the Salesforce Service Cloud application was inclusive and accessible to a diverse user base.
- Used Git for version control and collaborated with the development team to resolve defects, integrate new features, and manage test scripts.
- Automated end-to-end tests and integrated them into the CI/CD pipeline, ensuring continuous testing and faster feedback cycles.

## **EDUCATION**

**University of Denver- University College**

**September 2022 - June 2024**

*Master's Information and communication Technology*
