

PROFESSIONAL SUMMARY

- Highly experienced Senior Software Developer with over 5 years designing and implementing robust enterprise applications using J2EE and open-source Java frameworks.
- Adept at analyzing complex business requirements, performing thorough gap analysis, and translating them into scalable, efficient application solutions.
- Proven expertise in developing and maintaining both front-end and back-end components, ensuring seamless integration and optimal user experiences.
- Skilled in collaborating with business analysts and clients to gather detailed requirements, provide precise technical specifications, and mentor junior developers effectively.
- Experienced in leading multiple application releases from initial planning through successful completion, consistently enforcing stringent code standards and best practices.
- Proficient in designing and implementing responsive web interfaces leveraging modern front-end technologies like Angular, HTML5, CSS3, and Bootstrap for superior user experience.
- Extensive hands-on experience with core Java/J2EE, Spring, Hibernate/JPA, alongside designing and integrating with SOAP and RESTful web services for robust system connectivity.
- Demonstrated full lifecycle involvement in requirement gathering, comprehensive application design, development, and rigorous quality assurance across diverse projects.

TECHNICAL SKILLS

- **Programming Languages:** Java (J2EE, Core Java 8/11), JavaScript, TypeScript, SQL, C#, Python
- **Java Frameworks & Technologies:** Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Struts, Microservices, JSP, Servlets, EJB, JMS, MDB, JCA
- **Web Services & Integration:** RESTful APIs, SOAP, XSLT, API Gateways
- **Front-End Development:** React, Angular, HTML5, CSS3, Bootstrap, Vue JS
- **Cloud Platforms & DevOps:** AWS (EC2, S3, Lambda, RDS), Azure (App Services, AKS), GCP (BigQuery, Pub/Sub), Docker, Kubernetes, Jenkins, Git
- **Database Management:** Oracle, PostgreSQL, MySQL, MongoDB, Cassandra, Redis, Entity Framework
- **Messaging & Streaming:** Apache Kafka, RabbitMQ, JMS
- **Testing & Tools:** JUnit, Mockito, Selenium, Postman, Cucumber, Splunk, Grafana
- **Security & Compliance:** OAuth2, JWT, HIPAA, PCI-DSS, SOC2

WORK EXPERIENCE

Senior Software Developer @ Amae Health — Los Angeles, California

May 2024 – Present

- Designed and developed robust Spring Boot microservices, powering critical patient management and comprehensive therapy tracking applications.
- Built FHIR-compliant RESTful APIs, facilitating seamless healthcare interoperability and ensuring data exchange across diverse systems.
- Engineered secure authentication flows utilizing Spring Security and JWT, strictly adhering to HIPAA compliance standards for patient data protection.
- Integrated EMR and claims data through HL7 standards, enhancing data accuracy and streamlined processing within the healthcare ecosystem.
- Developed responsive React dashboards for visualizing patient progress, outcomes, and key performance indicators for clinicians, improving data insights.
- Led the migration of complex healthcare systems to Azure cloud-based microservices architecture, significantly boosting application performance by 30%.
- Automated appointment scheduling processes using J2EE components and open-source frameworks, which successfully reduced patient no-shows by 20%.
- Collaborated extensively with data analysts to integrate robust reporting APIs, enabling comprehensive data-driven decision-making for clinical operations.
- Built extensive unit and integration test suites, ensuring over 90% code coverage and maintaining high application stability and reliability.

- Optimized complex Oracle queries, successfully cutting clinical reporting times by 25% and enhancing overall system responsiveness for critical reports.

Technologies Used: Java 11, Spring Boot, React, HL7, FHIR, Oracle, Azure, Docker, Kubernetes, JUnit, Microservices, RESTful APIs, Spring Security

Software Developer @ Global Payments — Atlanta, Georgia

Mar 2021 – Jun 2023

- Designed and developed high-performance Java Spring Boot services for critical payment authorization and secure settlement processes.
- Built scalable RESTful APIs handling millions of secure daily financial transactions, ensuring high availability and data integrity.
- Integrated Kafka pipelines for real-time fraud detection and comprehensive transaction monitoring, minimizing financial risks effectively.
- Led the migration of legacy payment applications into a modern AWS-based microservices architecture, enhancing scalability and resilience.
- Developed responsive React dashboards providing intuitive merchant reporting and comprehensive transaction visibility, improving user experience.
- Optimized complex SQL queries, successfully reducing the latency of vital reconciliation jobs by a significant 35% margin.
- Automated deployment processes with Jenkins, Docker, and Kubernetes, streamlining CI/CD pipelines and accelerating software delivery.
- Implemented Spring Security and OAuth2 protocols, ensuring stringent PCI-DSS compliance for all payment processing operations.
- Created efficient caching layers utilizing Redis, significantly boosting high-volume API performance and reducing database load.
- Partnered closely with compliance teams to successfully meet all SOC2 audit requirements, upholding robust security standards.
- Built comprehensive test automation suites using JUnit and Mockito, ensuring high code reliability and reducing manual testing efforts.
- Delivered predictive insights dashboards for advanced fraud analytics, providing actionable intelligence to mitigate financial risks.

Technologies Used: Java 11, Spring Boot, React, Kafka, Redis, Oracle, AWS, Jenkins, Docker, Kubernetes, RESTful APIs, Spring Security, OAuth2

Junior Software Developer @ Costco Wholesale — Seattle, Washington

Nov 2019 – Feb 2021

- Developed robust Java backend services for enterprise-level inventory and sophisticated order management systems.
- Designed Spring MVC applications for critical point-of-sale (POS) and streamlined supplier integration systems.
- Developed REST APIs for efficient order tracking and enhanced customer engagement across various retail channels.
- Built responsive Angular dashboards for detailed SKU-level sales analytics and optimized replenishment cycles.
- Migrated large-scale reporting workloads to GCP BigQuery, significantly improving data processing scalability and performance.
- Automated SQL scripts, which successfully improved stock reconciliation processes by an impressive 15% margin.
- Partnered closely with merchandising teams to strategically optimize product promotions and inventory levels for maximum impact.
- Built high-performance caching APIs for rapid order lookups, effectively reducing response times by 20%.
- Developed comprehensive JUnit test cases, substantially improving application stability and ensuring reliable software delivery.
- Participated actively in Agile sprints, consistently delivering high-priority retail features within established timelines.
- Conducted thorough peer reviews, ensuring clean code, adherence to design patterns, and overall code quality.
- Built secure APIs supporting Costco's extensive loyalty membership system, enhancing customer retention and engagement.

Technologies Used: Java 8, Spring MVC, Hibernate, Angular, PostgreSQL, GCP BigQuery, Maven, Git, REST APIs, JUnit

EDUCATION

MS in Data Analytics @ Clark University
