

Name: Manoj M

Email: imanojm19@gmail.com

LinkedIn: <https://www.linkedin.com/in/manoj-man/>

Ph#: +1 (321)-447-9651

PROFESSIONAL SUMMARY:

- Full Stack Developer with 5+ years of experience, skilled in designing scalable enterprise solutions using modern frameworks, cloud services, and CI/CD pipelines. Versatile in Java and various web technologies.
- Built dynamic web applications utilizing HTML5, CSS3, JavaScript, TypeScript (Node.js/React/Next.js), AJAX, jQuery, Angular and Vue to deliver responsive, user-centric interfaces.
- Utilized Spring Boot, Spring MVC, and Microservices to develop high-performance application architectures, optimizing speed and reliability.
- Hands-on familiarity with LLMs and agentic systems such as LangChain, AutoGPT, and OpenAI's tooling, with a strong ability to quickly learn and adapt to new AI frameworks in production-grade environments.
- Optimized database interactions with Hibernate/JPA for effective ORM, driving system efficiency. Proficient with IaC using Terraform and monitoring solutions like ELK Stack, Prometheus, and Grafana for system observability.
- Applied TDD and BDD methodologies leveraging JUnit, TestNG, Postman, Selenium, and Mockito to ensure robust software quality and minimize production issues.
- Expert in application containerization with Docker and orchestration with Kubernetes, streamlining deployments using CI/CD pipelines with GitLab CI and Jenkins.
- Comprehensive experience with relational databases (SQL Server, MySQL, PostgreSQL, Oracle, DB2) and NoSQL databases (MongoDB, Cassandra), with a focus on query optimization and database efficiency.
- Developed and implemented RESTful and SOAP APIs. Implemented asynchronous messaging and event-driven architectures using Apache Kafka, RabbitMQ, AWS SQS/SNS,
- Skilled in optimizing cloud infrastructure on AWS and Azure services to boost performance and manage costs effectively. Experienced in DevOps practices, system integrations, and data migrations
- Involved in data engineering tasks such as building ETL pipelines, data enrichment, and data modeling, improving data accuracy and usability for business insights.
- Strong analytical mindset with a focus on continuous process improvements, proficient in Agile and Scrum methodologies for effective project lifecycle management.
- Collaborated with cross-functional teams, designers, and IT stakeholders, participating in backlog grooming, sprint planning, daily standups, code reviews, and retrospectives to align product vision and delivery

TECHNICAL SKILLS:

- **Programming Languages:** Java (8,11,17), SQL, PL/SQL, Python, C++, Kotlin
- **Back-End Development:** Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, JavaFX, Core Java, JDBC, Multithreading, JavaBeans, Express.js, Node.js
- **Frontend Technologies:** React.js, Angular, Vue.js, Next.js, Bootstrap, jQuery, HTML5, CSS3, Sass, SCSS, Tailwind CSS, JavaScript, ES6+, TypeScript, Npm, Webpack, NgRx
- **Database Technologies:** Relational: MySQL, PostgreSQL, Oracle
- NoSQL: Redis, MongoDB, CosmosDB
- **Middleware:** REST APIs, SOAP, JSON, YAML, XML, gRPC, GraphQL, HTTP, Web API.
- **Testing & Debugging:** JUnit, Postman, Selenium, Mockito, Cucumber
- **Cloud Computing:** AWS (EC2, S3, Lambda, DynamoDB, RDS), Microsoft Azure (Functions, SQL Database, Blob Storage, App Service)
- **Version Control & Collaboration:** Git, GitHub, Bitbucket, SVN, Jira.
- **DevOps:** Docker, Jenkins, Kubernetes, GitLab CI, Terraform, AWS Code Pipeline
- **Messaging and Queueing:** Apache Kafka, RabbitMQ, AWS (SQS, SNS)
- **Logging and Monitoring:** Splunk, AWS CloudWatch, Prometheus, Grafana, Datadog, Log4j
- **Authentication & Security:** OAuth 2.0, JWT, SSL/TLS, SAML, OWASP, RBAC, HTTPS
- **Architecture & Design Patterns:** Microservices, Serverless Architecture, Load Balancing, Caching (Redis, Memcached), MVC, SOA, UML, OOP Principles
- **Operating Systems:** Windows, macOS, Linux and Unix
- **IDE and Tools:** IntelliJ IDEA, Eclipse, VS Code, JIRA, Confluence, Figma, Bitbucket, SMSS

- **Documentation:** Swagger, API Documentation

CERTIFICATIONS: AWS Developer Associate, Docker Professional, UI/UX.

PROFESSIONAL EXPERIENCE:

Client: Cigna Healthcare, Tampa, FL

March 2024 – Present

Role: Java Software Developer

Responsibilities:

- Developed dynamic front-end modules for a **Member Engagement Platform** specifically in **Virtual Care Service and claims** using **Angular, TypeScript**, reducing page load times by 40% through optimized rendering and **API integration**.
- Designed and developed **RESTful APIs** using **Spring Boot, Maven, and Hibernate** with **Oracle DB**, implementing pagination, exception handling, and **ORM** optimization to support daily transactions with a 99% query success rate.
- Prevented unauthorized access incidents and ensured **HIPAA compliance** by implementing **OAuth2-based API security** with **Spring Security** across all REST endpoints.
- Enabled instant transaction status alerts by implementing **RxJS**-based event handling and **NgRx** state management for real-time dashboards.
- Optimized data flexibility by integrating **MongoDB** as a backend datastore for unstructured healthcare data reducing data update cycles by 20% and improving schema adaptability.
- Accelerated dashboard and reporting performance through **SQL** query optimization, indexing strategies, and database tuning in **Oracle** and **MySQL**.
- Architected and deployed HIPAA-compliant AWS solutions (**EC2, S3, RDS**) using **CloudFormation** for AWS-native resources and **Terraform** for cross-environment automation, reducing provisioning time by **50%**
- Accelerated event-driven workflows by building **AWS Lambda** functions in Python to process S3-triggered events and integrate with **DynamoDB/SQS**.
- Implemented event-driven communication using **Amazon SNS** for system alerts and **Amazon SES** for transactional and automated email delivery, boosting operational responsiveness and customer communication reliability.
- Automated **CI/CD** workflows using **Git** and **Jenkins** for containerized microservices on **Kubernetes**, achieving zero-downtime deployments.
- Maintained 99.9% uptime for mission-critical services by configuring **AWS CloudWatch Alarms** with **PagerDuty** for proactive incident resolution.
- Enforced code quality with **SonarQube** and improved performance via **JMeter** testing, reducing release cycles by **40%**
- Implemented real-time **Apache Kafka** pipelines to stream patient and claims data from **transactional** systems into analytics dashboards, reducing data processing latency.
- Ensured product quality by performing automated testing efforts using **JUnit, Mockito** and API validation using **Postman**.
- Collaborated in **Agile/Scrum teams** using **Jira** and **Confluence**, contributing to sprint planning, backlog grooming, and retrospectives, achieving 95% on-time delivery of **sprint** commitments.

Client: TD Bank, New York

December 2020 – December 2022

Role: Full Stack Developer

Responsibilities:

- Developed and optimized **React.js** applications for **Regulatory Reporting Systems** using Redux, React Hooks, Material-UI, and WebSocket integrations, improving dashboard load times by **35%** and analyst productivity by **25%**.
- Implemented responsive, user-friendly UI components with **HTML5, CSS3, JavaScript (ES6)**, and **React**, integrated with backend microservices via Fetch API; applied **Webpack** optimizations for faster loads and cross-browser compatibility.
- Engineered high-performance **Java 11 / J2EE-based Spring Boot** microservices with **Spring Data JPA, Spring AOP**, and proven design patterns, reducing report generation time by **40%** while processing thousands of daily transactions with zero data loss.

- Designed and integrated **RESTful** and event-driven **APIs** using **Spring Boot**, **XML**, **XSLT**, and **JSON**, enabling seamless interoperability with internal and external systems.
- Enabled real-time compliance checks and increased ingestion throughput 20% via event-driven architectures using **Azure EventHub**, **Kafka**, and Azure Functions.
- Implemented distributed ETL pipelines and analytics using **Azure Data Lake Storage (ADLS)**, **Azure Data Factory (ADF)**, reducing batch processing times from hours to minutes.
- Optimized **relational (Azure SQL, Oracle)** and **NoSQL (Cassandra, MongoDB)** databases with indexing, batch operations, and tuned data models, cutting query latency by **35%** for high-volume workloads.
- Ensured 99% uptime during releases by deploying containerized workloads to **Azure Kubernetes Services (AKS)** with autoscaling and blue-green strategies.
- **Secured** APIs with **Spring Security (OAuth 2.0, LDAP)** and centralized logging via **Log4j**; **conducted** vulnerability scanning with **Git Lab**, meeting enterprise and regulatory security standards.
- **Monitored and optimized** performance using **Datadog** resolving bottlenecks and improving application responsiveness by **30%**.
- Streamlined **CI/CD pipelines** using **Jenkins**, **Git**, **Maven**, and **Nexus**, cutting deployment cycles from weekly to daily.
- Reviewed code for quality and standards compliance and **implemented unit testing with JUnit** to ensure functionality and maintain 95%+ code coverage.

Client: Prudential, Newark, NJ

January 2019 – December 2020

Role: Java Developer

Responsibilities:

- Engineered a **Financial Wellness Platform** offering investment insights and retirement planning, developing and optimizing **Spring Boot/MVC REST APIs** that reduced response times through query optimization and caching.
- Delivered responsive **React.js dashboards** and **React Native**, enabling real-time investment and goal tracking across platforms, increasing daily active users by 25%.
- Used **Redux** for state management and integrated dynamic routing with **React Router**, improving responsiveness of real-time financial goal updates by 30% and enhancing overall navigation flow.
- Implemented **RabbitMQ** for asynchronous messaging, boosting platform responsiveness during peak loads and reducing message processing latency by 25%.
- Utilized **Apache Camel** for intelligent message routing, ensuring reliable and scalable data exchange between distributed services.
- Designed and integrated **RESTful** and **SOAP APIs** using **JSON/XML**, applying **SOA principles** to deliver modular, reusable services for both web and mobile clients.
- Optimized relational data structures in **SQL Server** and **PostgreSQL**, leveraging **Spring JDBC** and **Hibernate/JPA** for secure, efficient CRUD operations and reducing manual SQL by **40%**.
- Deployed cloud-native services on **AWS ECS**, using **S3** for secure document storage, **Lambda** for event-driven processing.
- Implemented observability with **Prometheus** and **Grafana**, enabling real-time monitoring, alerting, and performance visualization.
- Followed the **Waterfall** SDLC model with **UML diagrams** for precise service design, leveraging **OOP principles** to build scalable, reusable, and maintainable code, reducing post-release defects by 15%.
- Achieved 95%+ code coverage with **TDD using Junit** and **Selenium**.

EDUCATION

Master of Science in Computer Information Systems

January 2023 – December 2024

Florida Institute of Technology
