

MANOJ ASHOKREDDY

manoja9a@gmail.com | (312) 483-4484 | Dallas, TX | Open to Relocation

PROFESSIONAL SUMMARY

- Around 3+ years of experience in Information Technology as a QA Engineer with expertise in **Web, Mobile** and **API** testing, specializing in manual and automated testing using **Selenium WebDriver, TestNG, BDD/Cucumber, Rest Assured** and **Appium**.
- Extensive knowledge of Software Development Life Cycle (**SDLC**), Software Testing Life Cycle (**STLC**), and Defect Life Cycle with proven defect tracking and resolution skills using tools like **JIRA**.
- Expert in developing and executing automated test suites for web applications, creating robust frameworks using **Selenium WebDriver, Java** and **TestNG** to enhance test coverage, reduce testing time.
- Proficient in API testing using **Postman, SoapUI**, and **Rest Assured API**, performing functional, security, and performance testing on RESTful and SOAP services to ensure data integrity and reliability.
- Skilled in Behavior-Driven Development (**BDD**) using **Cucumber**, enhancing communication between developers and testers and supporting Test-Driven Development (**TDD**) methodologies.
- Strong experience with **CI/CD** pipeline integration, automating **Selenium** script execution using **Jenkins** for nightly batch runs and seamless deployments.
- Proficient in database validation and testing using **SQL**, ensuring backend integrity and leveraging data-driven testing techniques for comprehensive coverage.
- Experienced in cross-browser testing and parallel test execution with **Selenium WebDriver** and **TestNG**, ensuring consistent application performance across various environments.
- Proficient in designing and executing end-to-end test scenarios for both frontend and backend applications, ensuring seamless functionality and high-quality user experiences.
- Solid understanding of web services with hands-on experience in testing SOAP and RESTful APIs using tools like **Postman, SoapUI**, and **Ready API** for effective web service validation.
- Proficient in API testing using Playwright for performance testing on RESTful and SOAP services.
- Hands-on experience in performance testing using Playwright and other tools, identifying bottlenecks and optimizing application performance under different load conditions.
- Extensive experience in using **Confluence** for documentation, sharing test plans, strategies, and test results across teams.
- Experienced in emulator and simulator testing for Android and iOS applications using **Appium**, ensuring robust functionality across diverse devices and platforms.
- Hands-on experience in performance testing using Playwright and other tools, identifying bottlenecks and optimizing application performance under different load conditions.
- Experienced in developing reusable automation scripts and frameworks, optimizing testing workflows and reducing manual effort across projects.
- Skilled in cloud platforms such as **Microsoft Azure** and **AWS** for managing test environments and improving scalability in CI/CD pipelines.
- Familiar with **Agile** and **Scrum** methodologies, collaborating with development and QA teams to align testing strategies with project goals and ensure high-quality releases.
- Skilled in using **Git** for version control, implementing branching strategies and facilitating smooth collaboration across teams.
- Proficient in **C#** for developing automated tests and integrating with advanced test frameworks.
- Skilled in using **Azure DevOps** for managing test cases, defects, and reporting, providing visibility into test progress and ensuring proper alignment with cloud infrastructure.
- Familiar with **QTest** for managing test cases, defects, and reports, ensuring proper tracking and alignment of testing efforts with business goals.
- Actively participated in **Agile Scrum** activities including sprint planning, backlog refinement, and daily stand-ups, ensuring testing efforts are in line with business objectives using **JIRA** for defect tracking and collaboration.

TECHNICAL SKILLS

Languages: Java, SQL, C#

Testing Tools: Selenium WebDriver, Cypress, Appium

API Testing Tools: POSTMAN, SOAP UI, Ready API, REST Assured

Test Frameworks: TestNG, BDD/Cucumber, Maven, JUnit

Testing Methodologies: Behavior Driven Development (BDD), Data Driven, Test Driven Development (TDD), Agile, Scrum, Test Automation, Performance Testing, Quality Assurance, Continuous Integration

CI/CD Tools: Jenkins, Maven

Databases: MySQL Server, Oracle

Version Control: Git (GitHub)

Bug Tracking: JIRA, Azure DevOps

Test Management Tools: TestRail, Quality Center/ALM, QTest

Collaboration Tools: Confluence

Cloud Platforms: AWS, Microsoft Azure

PROFESSIONAL EXPERIENCE

Client: Walmart

March 2024 – Present

Role: QA Automation Engineer

Responsibilities:

- Performed the automation of web and mobile application testing using **Selenium WebDriver**, **Appium**, and **TestNG**, ensuring functional accuracy and performance across multiple platforms.
- Designed and implemented **BDD** test scripts with **Cucumber** and **Gherkin**, integrating them into the **Jenkins** CI/CD pipeline for efficient and automated deployments.
- Conducted API testing with **REST Assured**, **Postman**, and **SOAP UI**, ensuring proper validation of **RESTful** and **SOAP** services according to functional and performance standards.
- Performed **SQL-based database testing** to ensure data consistency between **APIs** and **databases**, validating accurate data flow.
- Managed test cases, defects, and reports using **Azure DevOps**, providing visibility and aligning testing with cloud infrastructure strategies.
- Actively participated in **Agile Scrum** activities, including sprint planning and backlog refinement, using **JIRA** to track and resolve defects.
- Led **cross-browser testing** with **Cypress** and **Selenium**, ensuring seamless user experiences across different browsers and devices.
- Developed, maintained, and optimized automated test scripts in **Java** and **TestNG**, integrating them with **Maven** and **Jenkins** for continuous testing and faster feedback cycles.
- Developed, maintained, and executed automated tests using **Robot Framework**, optimizing workflows and enhancing test coverage for both web and API tests.
- Managed source code and test script version control using **GitHub**, collaborating effectively with cross-functional teams and ensuring smooth collaboration for continuous integration.
- Integrated automated tests into **Jenkins CI/CD** pipelines, running tests nightly to ensure continuous validation and reduce testing cycle time.
- Integrated automated test scripts into **Microsoft Azure** cloud environment to enable testing at scale, ensuring smooth deployment and test execution in a cloud-native infrastructure.
- Performed functional and regression testing of **SOAP** and **RESTful web services** using **SOAP UI** and **Postman**, ensuring adherence to business requirements.
- Maintained and updated regression test scripts in **Selenium WebDriver** and **TestNG**, ensuring continuous coverage and early defect detection across development cycles.
- Used **QTest** to manage test cases, track defects, and generate comprehensive test reports to align testing efforts with the business and project objectives.

- Actively participated in Agile Scrum activities, ensuring that testing efforts were aligned with project goals and using **Azure DevOps** to track progress and defects.

Environments: Java, Selenium WebDriver, Appium, XCUI, Espresso, Gherkin, TestNG, BDD/Cucumber, Azure DevOps, Postman, REST Assured, SOAP UI, Playwright, GitHub, Jenkins, Maven, SQL, JavaScript, TDD, Git, QTest, SQL, Ready API, Cypress, Junit, Microsoft Azure.

Client: Tata Consultancy Services

June 2021 – July 2023

Role: Software Test Engineer

Responsibilities:

- Thoroughly analyzed **Business Requirement Documents (BRDs)** and **Technical Specification Documents** to gain a deep understanding of project scope and requirements. Based on this analysis, developed detailed **test plans** and **test cases** to ensure comprehensive coverage of both business and technical needs.
- Utilized **Quality Center/ALM** to create structured **test plans** and develop well-defined **test cases** that comprehensively validated both functionality and performance, meeting all business requirements.
- Performed initial **manual testing** for each new build, followed by **regression testing** using **Selenium WebDriver** to ensure that previously tested functionality remained intact after code updates.
- Engaged in **cross-browser testing** using **Selenium WebDriver** to verify consistent application performance across different browsers.
- Developed **data-driven test scripts** using **Selenium WebDriver** and **TestNG** to test functionality with varied input data, enhancing test coverage by validating multiple data scenarios.
- Leveraged **TestNG Annotations** to structure automated tests efficiently, enabling batch executions and simplifying test management within the **Selenium WebDriver** framework.
- Verified **SOAP** and **RESTful web services** using **SOAP UI** and **Ready API Tool**, ensuring that the XML responses matched expected results and confirmed the reliability of web services.
- Conducted **manual API testing** using **Postman** to validate **Web Services** functionality, complementing automated tests with quick feedback for specific API interactions.
- Managed **mobile automation testing** with **Appium**, ensuring the functionality and usability of both **Android** and **iOS** applications across different devices and platforms.
- Utilized **Maven** for building and running the **Selenium WebDriver** automation framework, generating detailed test reports, and sending automated reports via email for enhanced team communication.
- Participated in **distributed test automation execution** using **Jenkins** to ensure consistent and accurate execution of automated tests across different environments as part of the **continuous integration (CI)** process.
- Utilized **Microsoft Azure** and **AWS** cloud services to set up and manage automated test environments, ensuring that tests were executed in a scalable and efficient manner.
- Used **GitHub** for version control of test scripts and integration with CI/CD pipelines, ensuring smooth deployment and continuous testing.
- Implemented **Robot Framework** for web and API test automation, developing reusable and modular test scripts that reduced manual intervention and enhanced test coverage.
- Verified **backend data flow** using **SQL queries** to ensure the data from the database matched the data displayed on the frontend, validating correct integration between the application and the database.
- Actively participated in **status reporting**, **project meetings**, and **planning sessions**, ensuring that testing efforts were aligned with project goals, timelines, and stakeholder expectations.

Environments: Java, Selenium WebDriver, Cypress, TestNG, Jenkins, Maven, SOAP UI, Postman, Ready API, REST API, Playwright, Oracle SQL, TDD, Agile, XPath, ALM, Appium, Quality Center, Git, Windows, Microsoft Azure, AWS.

EDUCATION

Lewis University, Illinois - Masters of Computer Science in Software Engineering

Presidency University, Bengaluru – Bachelors of Computer Science
