

MARC AMOR

(573)-500-0032 marcamor07@gmail.com

Network Engineer with 5+ years of experience in network monitoring, troubleshooting, and escalation support. Skilled in delivering technical support and managing network operations for a client base of wholesalers, enterprises, service providers, and small & midsize businesses in a 24/7/365 environment. Certified in Full Stack Network Engineering, with a strong foundation in Layer 2 and Layer 3 networking protocols, BGP sessions, and DWDM circuits.

PROFESSIONAL EXPERIENCE

COGENT COMMUNICATIONS

Network Support Engineer, September 2024 – Present

- Troubleshoot and resolve customer issues related to Layer 2 MPLS, Layer 3, BGP, and other routing protocols.
- Perform configuration changes on routers, switches, and other network devices to ensure optimal network performance.
- Troubleshoot and configure wave services to maintain reliable high-speed connectivity.
- Assist customers via phone and email to resolve network-related issues and respond to service tickets.
- Coordinate with field engineers for testing circuits and conducting remote validation before handoff to customers.
- Collaborate with third-party vendors, service providers, and data center providers to resolve network outages and performance issues.
- Escalate complex issues to higher-level engineering teams, management, and relevant departments as needed.
- Perform circuit hot-cut migrations with minimal downtime for customers.
- Maintain detailed documentation of network configurations, changes, and troubleshooting steps.

ASTOUND BROADBAND

Commercial NOC Engineer, August 2021 – September 2024

- Monitoring and troubleshooting of voice and data circuits: Layer 2 MPLS circuits (E-Line, E-LAN/VPLS), Layer 3 Internet circuits (DIA, BCI, GPON), BGP session, SIP trunk circuits, and DWDM circuits.
- Troubleshooting vendor equipment such as Cisco (Catalyst switches, ASR9K, NCS 5500, 5700 series, Meraki), Ciena (3900 Series switches, 5170 series, Ciena BluePlanet portal), Juniper (EX 3400, 4300, and 2300 series, MX 240, 480 series), Adva switches, Calix ONTs, and T-Marc devices.
- Work closely with IP network engineers, Core network engineers, DWDM and Fiber Transport engineers, Change management team, Field Technicians and Outside Plant construction teams.
- Utilize a number of different network monitoring tools and element management systems to detect and resolve service-impacting events as soon as possible.
- Open and update technical support tickets for service-impacting events involving 3rd party support vendors.
- Bridge call meetings with 3rd party vendors, customer IT teams, and internal network teams.
- Set up and manage outages/repair bridges to restore service back to normal operating conditions as soon as possible.
- Open, update, and close tickets for customer-impacting events, outages and maintenance. This includes fully documenting ticket notes and closing tickets with Reason For Outage [RFO]

VELOCITY A MANAGED SERVICES COMPANY, VIRTUAL

Network Operations Technician & Analyst, March 2020 – July 2021

- Supported and troubleshot broadband circuits, routers, modems, switches, and WiFi
- Monitored automated probes, trouble tickets, emails, and phones for any indication of issues on customer networks
- Worked directly with customers, carrier service providers, and Tier 2 technicians to support and troubleshoot

EDUCATION **LANE COMMUNITY COLLEGE**
A.S. Business Administration

OPEN UNIVERSITY
Bachelor of Science in Information Technology (BSc IT)

NEXGENT | INTENSIVE 24-WEEK MILITARY-GRADE ENGINEERING PROGRAM
Full Stack Network Engineering Certificate

- 480hrs of training, education, simulations, hands-on experience and project management that includes a skills qualification check and required passing of written examinations

**TECHNICAL
STACK**

SKILLS

IT and Network Architectures, Network Devices and Components / Network Topologies and Types / Full Stack Networking / Network Management / Bits, Bytes, Ethernet and Media Access Control / Layer 2 and Layer 3 Switching / Virtual Local Area Networks (VLANs) / Spanning-Tree Protocol, Internet Protocol / Static Routing, Routing Protocols (EIGRP, OSPF, BGP) / IP Addressing, Subnetting and Access Lists / Network Address Translation (NAT) / Networking protocols such as ARP, ICMP, DHCP, FTP, Telnet and SSH / TCP and UDP Fundamentals / Network Cables and Connectors / Wireless LANs / Site-To-Site VPN / DMVPN / Layer 2 MPLS / Layer 3 MPLS / ServiceNow Ticketing System / Cisco IOS, IOS EX, and IOS XR, Juniper, Ciena
