📍 Florence, AZ

SUMMARY

Highly Full Stack Developer with 10+ years of experience in designing, developing, and deploying scalable web applications. Proficient in Laravel, PHP, and Node.js with strong skills in both frontend and backend technologies. Experienced in building RESTful APIs, working with cloud platforms (AWS, Azure), and using modern DevOps tools, CI/CD pipelines, and Docker. Skilled in Agile environments with a focus on clean, maintainable code, performance optimization, and security. Proven ability to collaborate with cross-functional teams to deliver high-quality, user-focused solutions. Passionate about continuous learning and staying current with emerging technologies and development best practices.

Skills

Tools & Methodologies:

Git, Webpack, Babel, Agile/Scrum, Jira, Confluence, Feature Flagging

Testing & Debugging:

Jest, Mocha, Chai, Cypress, Selenium, Postman, New Relic, Sentry

Frontend:

React.js, Angular, Redux, Next.js, TypeScript, HTML5, CSS3, Tailwind CSS, Material-UI, WebAssembly

Backend:

Node.js, Express.js, NestJS, PHP, Laravel, FastAPI, GraphQL, REST APIs, Microservices, Architectures

DevOps & Cloud:

AWS (S3, Lambda, EC2, API Gateway, DynamoDB), Google Cloud Platform (Cloud Functions, Firestore, Kubernetes), Docker, Kubernetes, CI/CD (Jenkins, GitHub Actions, GitLab CI/CD)

Security & Performance:

OWASP Security Principles, JWT, OAuth2, SAML, WebSockets, Load Balancing, Caching Strategies (Redis, CDN)

PROFESSIONAL EXPERIENCE

06/2022 – present

Principal Full Stack Engineer

Tech Holding

- Architected a scalable SaaS platform using React.js, Angular, and Node.js, optimizing server response times through code splitting and advanced caching strategies.
- Built high-traffic GraphQL APIs with Redis caching and CDN integration, significantly reducing API load and latency under peak usage.
- Designed a Kubernetes- and Docker-based microservices architecture, streamlining deployments and enhancing system scalability and resilience.
- Implemented CI/CD pipelines using GitHub Actions and AWS Lambda, enabling zero-downtime deployments with extensive automated test coverage across unit and E2E layers.
- Led a team of six developers in agile sprints, enforcing SOLID principles, code reviews, and engineering best practices to drive quality and reduce bugs.
- Spearheaded observability improvements using Prometheus, Grafana, and the ELK stack, accelerating incident response and enabling real-time system monitoring.
- Migrated legacy monolithic services to serverless architecture using AWS Lambda and API Gateway, reducing infrastructure overhead and improving performance.
- Collaborated cross-functionally with product and design teams to improve backlog grooming and sprint planning, resulting in faster feature delivery cycles.

05/2020 – 05/2022

Senior Full Stack

Conquerors Software Technologies

- Designed and scaled high-traffic web applications using PHP (Laravel/Symfony), Node.js, and React.js, optimizing API performance through query tuning and Redis caching.
- Overhauled MySQL and PostgreSQL architectures with advanced indexing, partitioning, and replication to support large-scale datasets with faster query execution.
- Led Next.js and React migrations with server-side rendering (SSR) and incremental static regeneration (ISR), enhancing SEO and improving page performance.
- Spearheaded code reviews and architecture guilds, mentoring junior engineers in SOLID principles and test-driven development with Jest and PHPUnit.
- Developed secure RESTful and GraphQL APIs with rate limiting and authentication (OAuth2/JWT), strengthening API security and reducing misuse.
- Deployed and managed scalable infrastructure on AWS using EC2, S3, RDS, and Elastic Beanstalk to ensure high uptime and performance.
- Integrated CI/CD pipelines using GitLab CI and Docker, reducing deployment failures and accelerating release cycles.
- Implemented real-time functionality with WebSockets via Laravel Echo and Socket.IO , enhancing interactivity and user experience in key application areas.

03/2019 – 05/2020

Full Stack Engineer

Chestnut Hill Technologies

- Designed and implemented reusable UI components using React.js, Angular, and Redux, significantly reducing development effort and improving consistency.
- Integrated RESTful APIs and optimized data fetching using Apollo Client and Redux Toolkit, enhancing performance and maintainability.
- Improved application speed through advanced Webpack configurations, including tree-shaking, lazy loading, and code-splitting.
- Conducted A/B testing for UI changes using Google Optimize and internal analytics tools, leading to measurable improvements in user engagement.
- Collaborated closely with backend teams to ensure robust API integration and scalable architecture in a microfrontend environment.
- Migrated legacy jQuery/Bootstrap interfaces to modern React with Material UI, resulting in better maintainability and improved accessibility compliance.
- Led performance audits using Chrome DevTools and Lighthouse, achieving noticeable improvements in page load metrics like First Contentful Paint (FCP).
- Implemented a shared design system using Storybook and coordinated with design teams via Figma, streamlining UI development and ensuring design consistency.

07/2017 – 03/2019

Software Developer

Astrosoft Technologies

- Designed and developed a custom e-commerce solution using React.js, Angular, Node.js, and PHP, supporting high user traffic with strong uptime and stability.
- Built server-side rendered (SSR) applications with Next.js and Angular Universal, leading to improved search visibility and faster page load times.
- Reduced query latency by applying indexing strategies, Redis caching, and optimized SQL/NoSQL queries across multiple services.
- Deployed applications on AWS (EC2, Elastic Beanstalk, S3), enabling high availability, auto-scaling, and efficient resource usage.
- Integrated Stripe, PayPal, and Razorpay payment gateways with secure workflows, resulting in a smoother checkout experience.
- Implemented Elasticsearch for the product catalog, delivering real-time, accurate search results for large datasets.
- Built custom admin dashboards with role-based access control, analytics, and CMS features to empower non-technical teams.

- Established automated test suites using Cypress, Jest, and PHPUnit, significantly reducing regression issues and improving reliability.

Education

Bachelor of Science in Computer Science

University of Arizona
