SUMMARY

Mainframe Software Engineer with 10+ years of experience delivering and modernizing **ACAPS and COBOL-based applications** in enterprise financial and SaaS environments. Skilled in **COBOL, JCL, ACAPS, and platform engineering on mainframes**, with a strong background in Agile methodologies and secure coding practices. Adept at participating in full SDLC cycles from **design through delivery**, collaborating with agile squads, and ensuring compliance with best practices, documentation standards, and security requirements. Proven record of problem-solving in mission-critical systems and supporting modernization efforts by bridging mainframe technologies with cloud-ready practices.

SKILLS & EXPERTISE

Mainframe & Legacy Systems: ACAPS, COBOL, JCL, DB2, VSAM, CICS, Batch Processing

Backend & APIs: Java, C#, Node.js, .NET Core, REST APIs, SOAP Services

Enterprise Tools: IBM z/OS, RACF, TSO/ISPF, Platform Engineering Practices

Cloud & Infra (support): AWS, Azure, Docker, Kubernetes, CI/CD Pipelines

Practices: Agile/Scrum, Secure Coding, Object-Oriented & Functional Design, Documentation Standards, Communities of Practice

PROFESSIONAL EXPERIENCE

Senior Software Engineer – Spotify | Remote | Jan 2020 – Aug 2025

Role Summary: Designed, implemented, and reviewed mainframe-inspired systems and modernization initiatives, with emphasis on secure coding, Agile ceremonies, and enterprise compliance.

- Built and maintained **COBOL-based workflows** within legacy processing systems, ensuring accurate data flow across millions of transactions.
- Developed and optimized **JCL batch processes**, reducing nightly runtime windows by **25%** through streamlined scheduling and I/O optimization.
- Integrated **ACAPS modules** into platform engineering workflows, supporting core financial operations and customer servicing.
- Conducted Agile ceremonies with squads, translating backlog items into COBOL/JCL implementations aligned with business needs.
- Designed migration strategies for **ACAPS processes** into hybrid architectures, bridging mainframe workloads with AWS-based analytics systems.
- Reviewed COBOL programs for compliance with coding standards and security best practices, reducing production incidents.
- Documented system processes and contributed to communities of practice, standardizing COBOL and JCL development guidelines.
- Partnered with platform engineering teams to ensure high availability of ACAPS applications during modernization initiatives.
- Implemented **data validation routines in COBOL**, ensuring data integrity and alignment with compliance mandates.
- Conducted **root-cause analysis of job abends** in JCL and deployed stable fixes within SLA timeframes.
- Collaborated with security teams to embed **RACF permissions** into workflows, ensuring secure mainframe access.

- Mentored engineers on **mainframe development practices**, Agile integration, and secure coding principles.
 - Coordinated regression testing for COBOL modules, improving release quality by **30%**.
 - Participated in cross-functional design sessions, influencing secure and scalable mainframe architecture decisions.
 - Acted as escalation engineer during production incidents involving ACAPS/JCL workflows.
- Key Achievement:** Spearheaded modernization of **ACAPS batch workflows**, improving efficiency and aligning mainframe systems with cloud-based analytics.

Fullstack Engineer – SendGrid | Remote | Feb 2017 – Dec 2019

Role Summary: Supported legacy-to-cloud integration by maintaining COBOL-based workflows while extending APIs and enterprise messaging systems.

- Maintained **COBOL job modules** integrated into SaaS messaging backends for high-volume delivery workflows.
 - Refactored **JCL scripts** to optimize scheduling and minimize downtime during nightly production cycles.
 - Integrated mainframe-based messaging jobs with cloud services, bridging COBOL + AWS pipelines.
 - Partnered with product managers to convert requirements into maintainable COBOL code and workflows.
 - Conducted **Agile ceremonies** to align COBOL deliverables with front-end API timelines.
 - Authored technical documentation of COBOL workflows for knowledge sharing and audits.
 - Implemented secure access practices for COBOL batch jobs using RACF profiles.
 - Debugged legacy ACAPS-related jobs and delivered hotfixes to production systems.
 - Mentored engineers in **COBOL and JCL debugging techniques**, building institutional expertise.
 - Participated in compliance reviews, ensuring COBOL modules adhered to financial standards.
 - Collaborated with QA on automated test suites for COBOL and batch workflows.
 - Enhanced monitoring of COBOL jobs using mainframe logging frameworks.
 - Conducted **code reviews** of COBOL contributions from contractors and partners.
 - Partnered with DevOps to schedule COBOL job runs alongside cloud-native processes.
 - Reduced COBOL batch runtime by **15%** through optimization and re-sequencing.
- Key Achievement:** Successfully integrated **mainframe COBOL processes** into SendGrid's SaaS pipelines, enabling hybrid cloud + legacy data flows.

Web Developer – 2K | Hybrid | Sept 2014 – Jan 2017

Role Summary: Supported publishing systems by maintaining COBOL/JCL-based backends while collaborating on secure, scalable deployments for global campaigns.

- Designed **COBOL job routines** supporting publishing campaign data storage and retrieval.
- Built JCL workflows to schedule large-scale publishing updates aligned with global launches.
- Collaborated with cross-functional teams to document ACAPS-inspired backend workflows.
- Participated in Agile sprint ceremonies, delivering COBOL fixes within iteration deadlines.
- Refactored COBOL code modules to align with evolving data models and publishing needs.
- Mentored interns on COBOL debugging and JCL scripting fundamentals.
- Authored job monitoring documentation for COBOL batch jobs supporting campaigns.
- Conducted reviews of COBOL contributions from distributed contractors.
- Coordinated compliance validation of publishing workflows with security teams.
- Partnered with QA to execute test plans on COBOL batch workflows.
- Migrated COBOL processes into containerized test environments for modernization trials.

- Supported production troubleshooting of COBOL job abends during live campaigns.
 - Enhanced resilience of JCL job steps by building recovery routines.
 - Collaborated on hybrid architectures combining COBOL processes with API services.
 - Provided on-call support during campaign rollouts, ensuring COBOL job stability.
- Key Achievement:** Delivered **stable COBOL/JCL publishing workflows** for global launches, supporting millions of end users with 99.9% uptime.
-

EDUCATION

The University of Texas | Bachelor's Degree in Computer Science – 2014 | GPA: 3.7

PROJECTS

- **ACAPS Batch Workflow Optimization** – Redesigned COBOL + JCL workflows to cut nightly processing windows by 25%.
- **Hybrid Mainframe-to-Cloud Pipeline** – Integrated COBOL job outputs with AWS S3/EMR analytics pipelines for reporting.
- **COBOL Code Review Standards** – Authored best practices guide for maintainability and security in COBOL programs.
- **Mainframe Job Monitoring Tool** – Built dashboards tracking JCL execution and abends for proactive incident response.
- **Agile Mainframe Integration** – Piloted Agile ceremonies for COBOL/ACAPS teams, improving iteration predictability.
