Illinois, USA

ABOUT ME

Seeking a Java Full Stack Developer position with an outstanding career opportunity that will offer a rewarding work environment along with a winning team that will fully utilize management skills. Experience in full software development life cycle (SDLC) from requirements gathering, prototyping, designing, implementing, testing, maintenance, and full documentation.

SUMMARY DETAILS

- Over 5+ years of IT Professional experience in all phases of software development life cycle to requirements gathering Analysis, Design, Development, Maintenance and Implementation of enterprise, web and client server applications using JAVA/J2EE technologies.
- Extensively used **Hibernate** in data access layer to access and update information from the **Oracle** database and used **Hibernate** Query Language (HQL) for writing the queries. Extensive experience in using IDEs like **Eclipse**, **Spring Tool Suite**. Thorough knowledge in using **UML**, **XML** parsers (SAX, DOM), **SOAP**, **HTML** and **DHTML**.
- Proficient in utilizing **AWS Lambda** to build serverless architectures and improve application scalability and efficiency.
- Extensive knowledge in database transactions management for database related changes by integrating **JDBC**, **Hibernate** with **Spring Boot**. Good knowledge of Stateful /Stateless Session EJBs and Entity EJBs.
- Experience in handling messaging services using **Apache Kafka** Implemented **AWS** solutions using **EC2**, **S3**, **RDS**, **EBS**, Elastic, Load Balancer, Auto-scaling groups and used **AWS** SDK to connect with Amazon SQS for bulk email processing.
- Experience successfully implementing the **DevOps** (CI/CD) model using **Jenkins**, **Gradle**, SonarQube, Subversion, Jfrog Artifactory, and semantic versioning tools/frameworks/plugins.
- Experience in writing Ant, Maven build scripts, providing logging facility using **Log4j** and Writing **JUnit** test cases.
- Used Apache **SVN** and **Git** for repository management and Ant for build management.
- Experience with complete Spring framework- Spring Boot, AOP, Transactions, Security, Auto wiring, ORM, MVC, Spring Data, Spring Hystrix, Hateos, Webflow and Spring integration with AWS.
- Experienced in performing unit testing using **JUnit**, Mockito integration and deployment of applications using tools such as Ant, **Jenkins** and Maven & debugging through **Log4j**. Good experience in **Agile** and SCRUM methodologies.
- Strong knowledge and hands-on experience of deploying applications using **Kubernetes**, cloud native application development, pivotal cloud foundry, **JavaScript**, Kendo UI, **Java/J2EE** technologies & **RDBMS**.
- Experienced with developing rich user interface applications using **HTML5**, **CSS3** and **JavaScript**, **jQuery**, **Angular**, Node JS, **React**, Backbone JS, Twitter **Bootstrap**, **jQuery** Mobile, **XML**, **JSON** that follows W3C Web Standards and are browser compatible. Experienced in developing and deploying **J2EE** components (JDBC, **Servlets**, JSPs, EJBs) in Tomcat, WebLogic, WebSphere and JBoss Application servers.
- Familiar with designing and coding Stored Procedures, Triggers, Cursors and Functions using **PL/SQL**.
- Experience with implementing Service Oriented Architecture (SOA) using **SOAP** and REST Web Services.
- Experience in various web application servers like WebLogic, **Apache Tomcat** and JBoss.

WORK EXPERIENCE

Java Full Stack Developer - Arthur J. Gallagher & Co. (AJG)

Itasca, Illinois, USA

Oct 2024 - Current

Arthur J. Gallagher & Co. (AJG) is an American global insurance brokerage and risk management services firm. Design, develop, and maintain server-side logic using Java and related frameworks such as Spring Boot. Implement RESTful APIs and web services for seamless communication between the front-end and back-end.

Key Responsibilities:

- Involved in setting up the application to run on **AWS** cloud environment on multiple Ec2 instances. Created even driven jobs using **AWS** cloud tools like **S3**, **DynamoDB**, SNS, SQS and **AWS Lambda** with **Java**.
- Implemented **Hibernate** along with annotation based transactional support in **Spring** Framework.
- Building cloud **Microservices** and implemented back-end using **Spring Boot**. And Authored application using **Spring Cloud** services (Spring version of Netflix OSS-Eureka that helps in routing, Circuit Breaker and Ribbon for client-side load balancing). Implementing keyspaces, tables, and indexes in **Cassandra** database to suit application needs.
- Used **Apache Kafka** in cluster as messaging system between APIs and **Microservices** and worked on Splunk SPL (Search process language) queries, reports and logging using **Log4j**.
- Used **React** as framework to create a Single Page Application (SPA) which can bind data to specific views and data with server. Developed **CI/CD** pipeline and build tasks to run the unit tests on **Jenkins** and maintained separate build in Maven for the module for easy integration to the portal build and configure with **Jenkins**.
- Written **JDBC** code to interact with **MySQL** data base. Implemented a batch framework in data base to support scheduling jobs. Develop various screens for the front end using **React** and used various predefined components from NPM (Node Package Manager) and **Redux** library.
- Developed and maintained both front-end and back-end components for ExxonMobil's internal tools and systems using **HTML/HTML5**, **CSS/CSS3**, and **Bootstrap** for responsive and intuitive design, ensuring smooth user interactions.
- Designed user interfaces with dynamic features using **ReactJS** and **jQuery**, optimizing user experience in ExxonMobil's employee portals and customer-facing applications.
- Created **RESTful APIs** using **JAX-RS** and **Spring Boot**, enabling seamless data exchange between ExxonMobil's front-end applications and backend services in energy management systems.
- Enhanced application performance by handling asynchronous communication with **Ajax**, improving page load time and interactivity for ExxonMobil's asset management systems and Integrated complex data models using **XML** and **JSON** to facilitate smooth information exchange between ExxonMobil's internal systems, reducing communication latency.
- Used **Java 8 Lambda Expressions** and **Stream API** to handle collections of data in a more functional and declarative way. Extensive experience in Pivotal Cloud Foundry (**PCF**).
- Services are migrating to Camel and deploying to **Kubernetes** cloud environment using **CI/CD** pipe line.
- Used **AJAX** to implement some customizations which required dynamic behavior like controls dependent on user value selection on some other controls.

Technologies Used: AJAX, Apache Kafka, AWS, AWS Lambda, Cassandra, CI/CD, DynamoDB, Hibernate, Java, Java 8, JDBC, Jenkins, Kafka, Kubernetes, Lambda Expressions, Log4j, Microservices, MySQL, PCF, React, Redux, S3, Spring, Spring Boot, Spring Cloud, SQL, Stream API

Java Full Stack Developer - Walgreens Boots Alliance

Deerfield, Illinois, USA

Mar 2024 - Sep 2024

Walgreens Boots Alliance, Inc. is an American multinational holding company. It has pharmaceutical manufacturing and distribution companies. I developed user-friendly and responsive web interfaces using HTML, CSS, and JavaScript frameworks. Designed and managed the database schemas, write efficient SQL queries, and perform database optimization.

Key Responsibilities:

- Created Q manager connection factory, **JMS** destinations to integrate the application using **JMS**.
- Automated app Service scaling options using Terraform scripts for **Azure** app services.
- Played key role as senior developer during development of next generation Microservices. Used **Docker** Container to address every application across the hybrid cloud and **Docker** for better collaboration and innovation.
- Experience in handling messaging services using **Apache Kafka** implemented Micro services architecture to make application smaller and independent REST web services using Jersey with the enabled **OAuth**.
- Experience in managing **MongoDB** environment from availability, performance, and scalability perspectives. Executing tasks on **XML** registry, XSLT/XQuery, and transformation capabilities. Created interactive, real-time dashboards using **HTML5**, **CSS3**, **Bootstrap**, and **jQuery**, enabling users to access and visualize critical financial data and analytics and Utilized **TypeScript** and **JavaScript** to write robust, scalable, and maintainable code, contributing to full-stack development in complex banking environments and Integrated **Angular** with **Node.js** to build high-performance, responsive front-end interfaces, enhancing user experience on Comerica's online banking platform.

- Used Subversion for configuration Management and **Jira** for task management and bug tracking.
- Created and triggered automated builds and continuous deployments (**CI/CD**) using **Jenkins/looper** and **OneOps** cloud.
- Implemented light weight **WADL** (Web application description Language) for better understanding of Rest based web services and its configuration. Developed **CSS** styles for web pages using SCSS structure and implemented routing for a Single Page Application (**SPA**) using **Angular 8**.
- Designed and developed dynamic web applications using **ReactJS** and **NodeJS**, ensuring real-time data updates and seamless user interactions for Comerica's online banking platform.
- Implemented business logic and data processing layers using **Spring Boot**, **Spring Security**, and **Spring MVC**, enhancing the scalability and security of Comerica's banking applications, while optimizing **Oracle**, **MySQL**, **PostgreSQL**, **MongoDB**, **Cassandra**, and **DynamoDB** databases for efficient financial data management.
- Utilized **Hibernate** and **JPA** to streamline database interactions, ensuring smooth compatibility across relational and NoSQL databases for transactional banking systems and developed and tested **RESTful services** and APIs using **JAX-RS** and **Spring Data REST** to ensure reliable communication between the client and server layers in the banking platform.
- Development in extraction, transformation & loading using **Spring Batch** as extracted data are maps, data encryption & decryption. Use Swagger for API documentation and testing.

Technologies Used: Angular, Apache Kafka, Azure, CI/CD, CSS, Docker, Jenkins, Jira, JMS, Kafka, Microservices, MongoDB, OAuth, Spring, XML

Java Full Stack Developer - NABARD Mumbai, India Jun 2021 - Nov 2023

NABARD is a Development Bank with a mandate for providing and regulating credit for the development of agriculture, small-scale industries, cottage and village industries, and etc. Used ORM tools like Hibernate for database interactions. Integrated third-party services and APIs into the application.

Key Responsibilities:

- Used **Node.js**, **React**, and Backbone.JS **MVC** framework for developing the Single Page Application (**SPA**).
- Design and implementation of web applications in **Java** and **HTML5/JavaScript** using **Eclipse**.
- Unit testing and E2E testing frameworks are used. Responsible for unit, functional, integration, automation backend **API's** testing for all new software features and enhancements using **JUnit** and **TestNG** framework.
- Good Experience in **React** for creating interactive UIs using one-way **data flow**, **Virtual dom**, **JSX**.
- Developed automation for **Validation Service** to generate **JASPER** reports based on **Bean validations** and **Spring validations**, ensuring compliance with regulatory standards and accurate reporting in insurance data processing.
- Implemented **J2EE** patterns such as **Data Access Object (DAO)**, **Session Facade**, **Business Delegate**, and **Value Object** to improve modularity and scalability of life insurance applications and Utilized **Log4J** and **Splunk** for logging and tracing, providing comprehensive operational transparency and real-time monitoring of application performance.
- Developed applications using **Java 8** new features like lambda expressions, Stream API, default, static methods.
- Installed Pivotal Cloud Foundry on **EC2** to manage the containers created by Pivotal Cloud Foundry (**PCF**).
- Developed JASPER report to show the result after validations are performed on the test cases and maintaining several data accuracy. Developing Mock Screens/Wireframes using **Angular 8**, DXP (Digital Experience Platform), **HTML 4.0/5.0**, XHTML, **CSS**, **CSS3**, **JavaScript**, **jQuery**, Ajax and **JSON**. Utilized **Docker** and **Kubernetes** for containerization and orchestration, ensuring consistent application deployment and efficient management of services in Comerica's cloud infrastructure and Implemented **OAuth2** and **JWT** authentication mechanisms, ensuring secure user access and data protection for Comerica's customer-facing and internal applications
- Involved in designing the report for the validation service to identify bad data and data consistency from legacy database to migration database in **SQL Server**. Build **Microservices** for the delivery of software products across the enterprise.
- Created UNIX shell scripts to run the Informatica workflows and controlling the ETL flow.
- Worked on moving the production **SQL Server** blueprint to the new **AWS RDS** Aurora instance.
- Used **jQuery** APIs to implement cross-domain calls and handling **JSON** responses.

Technologies Used: Angular, AWS, CSS, CSS3, EC2, Eclipse, HTML, HTML5, Java, Java 8, JavaScript, jQuery, JSON, JUnit, Microservices, MVC, Node.js, PCF, RDS, React, S3, SQL, SQL Server, Stream API, TestNG

Java Developer - Afcons Infrastructure
Mumbai, India **Jun 2019 - May 2021**

Afcons Infrastructure Limited is an Indian multinational construction and engineering company. Used version control systems like Git for code management and collaboration. Maintained the comprehensive documentation for code, APIs, and development processes.

Key Responsibilities:

- Developed multiple enterprise applications using **Spring Boot, Hibernate framework, Spring IOC, Spring MVC, Spring JDBC, Spring Annotations, Spring AOP, Spring Integration, frameworks, RESTful webservice**.
- Design and maintain **Spring Boot Microservices** for large-scale enterprise applications.
- Modified existing Shell scripts in Unix to call daily sub routines. Good Command on CQL to run queries on the data present in **Cassandra** Cluster. Used **Git** as version management, **Jira** for defect management system.
- Manage and fix bugs with **Jira** bug tracking application. Developed the REST **Microservices** using **Java JDK 1.8** on **IntelliJ** platform by gathering the knowledge of previous phase resources and integration with **Oracle**.
- Created Low Level Design Documents for services and web application. Involved in writing the **Microservices** in **Spring Boot** application with **Spring** annotations. Followed **Agile** methodology and involved in daily SCRUM meetings, sprint planning, showcases and retrospective and used **Jira** as a tracking tool for the sprints.
- Write unit tests using **JUnit**, Mockito or other testing frameworks to ensure code quality and test coverage.
- Implemented multi-threaded synchronization processes, with **JMS** queues for consumption of Asynchronous requests.
- Developed automation of Validation service to provide the JASPER report based on bean validations, **Spring** validations on test cases. Implemented applications in **HTML, CSS, JavaScript**. Implemented and managed automated **CI/CD pipelines** using **Jenkins** and **GitHub Actions** to streamline build, test, and deployment processes, ensuring continuous delivery of biopharmaceutical solutions.
- Worked extensively on the front-end side using **JSP, HTML, CSS3, JavaScript, and jQuery**, and developed deployment scripts for **UNIX** platform, responsible for **JAVA, J2SE/J2EE, JBPM, EL, and Java FX** coding/development.
- Used **Spring MVC** as the web module, involved in the design and development of new action classes to interact with business logic, and utilized **Hibernate** as ORM to map Java classes to database tables for seamless data interaction.
- Worked on Rest Web services for backend services, used Couchbase DB (NoSQL) for database services.
- Development to expose User Profile services to other departments users using **RESTful WS**.
- Implemented **core java** Multithreading, Collections, Exception Handling, and OOP's concepts.

Technologies Used: Agile, AOP, Cassandra, core java, CSS, Git, Hibernate, HTML, IntelliJ, Java, JavaScript, JDBC, Jira, JMS, JUnit, Microservices, MVC, NoSQL, Oracle, RESTful, Spring, Spring Boot, Spring IOC, Spring MVC, SQL

KEY SKILLS

Programming Languages	Java, JavaScript, TypeScript, SQL
Frontend Frameworks	Angular, React, Vue.js, Bootstrap
Backend Frameworks	Spring Boot, Hibernate, JEE, Jersey
Relational Databases	Oracle, MySQL, PostgreSQL
NoSQL	MongoDB, Cassandra, DynamoDB
Version Control	Git, GitHub, GitLab, Bitbucket
CI/CD Tools	Jenkins, GitLab CI/CD, Azure DevOps, Bamboo
Cloud Platforms	AWS (Elastic Beanstalk, EC2, Lambda, S3), Azure (App Services, Functions), GCP
Containerization and Orchestration	Docker, Kubernetes
Monitoring and Logging	ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana
Testing Tools	JUnit, Mockito, Selenium, Postman
Others	Maven, Gradle for build automation, Jira, Confluence for project management

EDUCATION

Trine University, USA
