SUMMARY

Results-driven Senior Android Engineer with 8 years of hands-on experience building high-performance, scalable applications for streaming , eCommerce, and fintech platforms.

- Expertise in Kotlin and Java with a proven ability to design, develop, and deliver complex features using Kotlin, Java, Jetpack compose, modern architecture patterns (MVVM/MVI, KMM).
 - Expertise in optimizing app performance through modularization, dependency injection (Dagger/Hilt), ProGuard, and advanced Gradle build optimizations.
 - Strong track record of optimizing app performance for various Android versions and devices, ensuring a smooth user experience and high user satisfaction ratings.
 - Strong Architecture (Define, OOP, SOLID, design patterns and drive) and Migration experience.
 - Strong focus on security with experience in data encryption, secure coding, and vulnerability mitigation.
 - Proven ability to integrate complex features such as real-time features, payment solutions, geofencing, offline-first experiences, and push notifications, complex UI and animations, biometric authentication.
 - Collaborative team player focused on delivering user-centric experiences and high-quality releases.
 - Skilled in conducting code reviews, writing unit and integration tests, and implementing continuous integration/continuous delivery (CI/CD) pipelines to ensure code quality, reliability, and maintainability of Android applications.
 - Passionate about staying updated with the latest trends, actively mentors junior engineers, fostering a culture of learning and innovation.
-

EXPERIENCE

Capgemini

Senior Android Engineer

San Diego, CA
December 2021 - January 2025

- Engineered a high-performance Android streaming application using Kotlin, Jetpack Compose, and ExoPlayer, optimizing adaptive video playback with DRM protection, custom buffering strategies, and seamless playback controls to enhance the user experience.
- Led the migration from XML-based UI to Jetpack Compose, establishing a declarative UI architecture with custom theming, animation transitions, and accessibility improvements, significantly enhancing app maintainability and user experience.
- Architected the app using a modularized MVVM pattern with Unidirectional Data Flow (UDF), utilizing Coroutines, Flow, and Kotlin StateFlow to ensure efficient state management and improved responsiveness in live streaming scenarios.
- Optimized Gradle build performance by restructuring module dependencies, reducing build times by ~60% through advanced profiling techniques, dependency caching, and efficient configuration of Kotlin and Java compilation tasks.
- Refactored legacy networking code by adopting Retrofit with OkHttp interceptors and GraphQL, improving API request efficiency, caching strategies, and overall app performance.
- Integrated real-time analytics and A/B testing using Firebase Analytics, Google Tag Manager, and Segment, enabling data-driven decisions for personalized content recommendations and user engagement strategies.
- Reduced reliance on third-party libraries by building in-house solutions for image caching, logging, and UI components, improving app stability, reducing binary size, and ensuring long-term maintainability.
- Developed a comprehensive testing strategy by implementing unit tests with JUnit and MockK to validate business logic, integration tests using Retrofit and Room to ensure seamless API and database interactions, and internal testing via Firebase App Distribution and Google Play Internal Testing, enabling rapid feedback cycles and improving overall app stability before production releases.
- Leveraged Static Code Analysis tools such as SonarQube and Android Lint to enforce coding standards, detect code smells, and prevent performance bottlenecks early in the development lifecycle.
- Collaborated closely with cross-functional teams, including product managers, designers, backend engineers, and QA, to align development with business goals, refine requirements, and deliver a seamless user experience through efficient communication, Agile methodologies, and iterative feedback loops.
- Developed a cross-platform shared codebase using Kotlin Multiplatform (KMP), enabling seamless code reuse across Android and iOS for business logic, networking (Ktor), and data persistence (SQLDelight), significantly reducing development effort and ensuring consistency across platforms.

Sofomo

Android Engineer

San Francisco, CA
October 2017 - October 2021

- Developed a high-performance Android eCommerce application using Kotlin, Java, RxJava, optimizing UI rendering and data fetching for seamless browsing, personalized recommendations, and real-time inventory updates.
- Implemented a scalable and secure checkout process using MVVM architecture, Retrofit with OkHttp interceptors for network efficiency, and Google Pay integration, reducing cart abandonment rates and improving transaction success rates.
- Implemented a location-based geofencing feature using Google's Geofencing API, WorkManager, and Fused Location Provider, enabling real-time notifications, personalized offers, and location-aware services while optimizing battery consumption and ensuring compliance with background location policies.
- Implemented an offline shopping experience using Room Database and WorkManager, allowing users to browse previously viewed products, add items to the cart, and complete purchases even in low-connectivity environments.
- Optimized push notification strategies using Firebase Cloud Messaging (FCM) and AirShip, implementing personalized offers, cart abandonment reminders, and real-time order tracking updates to increase user engagement and retention.

- Developed a multi-currency and localization system using Android’s Locale API and Remote Config, enabling seamless region-based pricing, language support, and country-specific promotions across international markets.
- Integrated secure and seamless payment solutions using Google Pay, Stripe, and PayPal SDKs, implementing PCI-DSS compliance, tokenization, and 3D Secure authentication to ensure secure transactions, reduce fraud risks, and enhance checkout efficiency for a frictionless user experience.
- Optimized app performance and startup time by implementing Jetpack App Startup, ProGuard, and R8 optimizations, reducing load times and improving overall efficiency.
- Enhanced performance and scalability by implementing modularization with feature modules, enabling faster startup times, reducing APK size, and allowing on-demand feature downloads for a more efficient and seamless user experience.
- Experienced in a robust CI/CD pipeline using GitHub Actions, automating build, testing, and deployment processes, while streamlining Google Play Store releases through Gradle Play Publisher, internal testing tracks, and staged rollouts to ensure smooth and efficient app deployments.

EDUCATION

Bachelors of Science, Computer Science

Chapman University

Orange, CA
2017

- Software engineering, Object-Oriented Programming, Operating System, Database Science. Computer Network, Information Security

CERTIFICATIONS

Mobile Application Development Certificate

Coursera • 2017

SKILLS

Programming Languages & Frameworks:

- Kotlin, Java
- Jetpack Compose, XML
- Kotlin Multiplatform (KMP)

Android Development:

- MVVM, MVI, UDF, Clean Architecture
- Modularization & Multi-Module Architecture
- Coroutines, Flow, LiveData, RxJava
- Jetpack Components (Navigation, WorkManager, Room, Paging, ViewModel)
- ExoPlayer, CameraX, Firebase SDK

Tools & Technologies:

- Dagger, Hilt, Koin (Dependency Injection)
- Retrofit, OkHttp, GraphQL
- Room, SQLite, SQLDelight
- Firebase (Auth, Firestore, Remote Config, Analytics, Crashlytics, FCM)
- Google Play Services (In-App Billing, Geofencing, Location, Maps, App Links)

Performance & Optimization:

- Gradle Build Optimization, Modularization
- R8, ProGuard, Code Shrinking & Obfuscation
- Memory & CPU Profiling (Android Studio Profiler, LeakCanary)

Testing & QA:

- JUnit, MockK, Robolectric
- Firebase Test Lab
- Test-Driven Development (TDD)

CI/CD & Deployments:

- GitHub Actions, Jenkins
- Google Play Console, Firebase App Distribution
- Staged Rollouts, A/B Testing

eCommerce & Payments:

- Google Pay, Stripe, PayPal SDK
- In-App Subscriptions & Purchases

Cross-Platform & Backend Integration:

- Kotlin Multiplatform (KMP) for shared business logic
- REST, GraphQL API Integration
- WebSockets for real-time communication

Other Notable Skills:

- Agile/Scrum, Jira, Confluence
- Code Reviews, Pair Programming, Technical Mentorship
