

MUHAMMAD AHSAN

JAVA DEVELOPER

(206) 565-9996 | ahsanmh1111@gmail.com | WA

SUMMARY

Java Developer with Around 3 years of experience, proficient in SDLC, Agile, and Waterfall methodologies. Expert in Java, SQL, and JavaScript (Node.js), with deep knowledge of Spring, Hibernate, and microservices frameworks. Skilled in developing Apache Tomcat and WebSphere applications, utilizing cloud technologies like AWS, and managing databases including MySQL, PostgreSQL, and Cassandra. Adept at using IDEs like IntelliJ IDEA and Eclipse, with strong competencies in Gradle, Jenkins, JUnit, and Git for seamless development and version control.

SKILLS

Methodology: SDLC, Agile, Waterfall

Programming Languages: Java (Core Java, Java 8), SQL, JavaScript (Node.js for backend scripting)

Frameworks and Technologies: Spring (Spring MVC, Spring Boot, Spring Security), Hibernate, JPA, RESTful API, Microservices

IDEs: IntelliJ IDEA, Eclipse, Visual Studio Code

Java Enterprise Edition (J2EE) Technologies: Servlets, JSP, JSTL, JavaBeans, JDBC

Application Servers: Apache Tomcat, WebSphere

Cloud Technologies: AWS

Databases: MySQL, PostgreSQL, Cassandra

Build and Other Tools: Gradle, Jenkins, JUnit

Version Control: Git, GitHub

EDUCATION

Bachelor in CSSE: Information Assurance and Cybersecurity

Dec 2024

University of Washington, Bothell, WA

EXPERIENCE

ServiceNow, WA - Java Developer

Oct 2023 – Current

- Design and implement microservices using Spring Boot and RESTful APIs, integrated with AWS to enable modular development and efficient resource scaling. Leveraged AWS services such as EC2, Lambda, and S3 to enhance system modularity and scalability by 30%.
- Develop backend services with Core Java and Node.js, implementing asynchronous processing with Executor Service and Event-driven Architecture for high-performance processing. Used Load Balancing techniques with AWS ELB to handle 50,000+ daily transactions.
- Built and optimized SQL queries for MySQL and PostgreSQL, applying advanced indexing and data profiling techniques using SQL Server Management Studio (SSMS), resulting in a 25% reduction in database response time.
- Configure and manage deployments on Apache Tomcat, automating the deployment pipeline with Jenkins and Docker for containerization. Achieved a 15% improvement in server uptime through performance tuning using New Relic for monitoring.
- Lead development cycles using the Agile methodology and Jira for sprint planning, backlog grooming, and retrospectives, improving team efficiency and resulting in a 95% on-time delivery of project milestones.
- Create secure authentication and authorization mechanisms with Spring Security, implementing OAuth2 and JWT for token-based security and employing AES encryption protocols, reducing security incidents by 40%.
- Utilize Jenkins for CI/CD pipelines, automating testing and deployment stages with JUnit and Selenium, reducing build times by 20% and ensuring faster releases.

DXC Technology, Software Developer

Apr 2022 – Oct 2023

- Engineered high-performance distributed systems using Java 8 and hibernate, implementing transaction management and leveraging Spring Cache and Redis for caching, which resulted in a 35% increase in system throughput.
- Designed and optimized scalable database schemas for Cassandra and PostgreSQL, applying partitioning strategies and schema normalization with pgAdmin and Cassandra Query Language (CQL) to enhance storage efficiency by 40%.
- Developed and deployed web applications on WebSphere, using Jenkins to automate deployment pipelines and Ant for build automation, reducing deployment errors by 25%.
- Implemented dynamic front-end functionalities using JSTL and JavaBeans, collaborating closely with UI/UX teams to ensure responsive design. Applied JavaScript and AJAX to improve UI responsiveness by 30%.
- Collaborated in cross-functional teams using the Waterfall model and MS Project to track timelines and dependencies, delivering projects on schedule and meeting 100% of client specifications.
- Wrote unit tests with JUnit and followed a Test-Driven Development (TDD) approach, achieving 98% test coverage for critical components and ensuring code quality.
- Managed version control workflows on GitHub with Gitlow and integrated peer reviews, reducing merge conflicts by 15% and ensuring smoother team collaboration.
- Migrated legacy applications to AWS Cloud, utilizing EC2 for computing and S3 for storage. Applied cost-optimization strategies using AWS Trusted Advisor to reduce hosting costs by 20%.
- Automated builds and deployments with Gradle, integrating with Jenkins pipelines and using Docker for consistent environments, boosting developer productivity by 25%.
