Summary

Experienced Full Stack Developer with a strong background in designing and delivering robust applications through agile methodologies and client collaboration. Proficient in developing REST APIs, managing databases, and streamlining deployments using DevOps principles. Demonstrates expertise in Angular and migration projects on Azure DevOps, complemented by a solid understanding of modern Microsoft frameworks. Adept at translating user stories into efficient, validated designs while consistently achieving sprint targets.

Technical Skills

- **Programming Languages:** Java, JavaScript, Python, C++, C#
- **Frameworks And Libraries:** Spring Boot, ASP.Net, .NET Framework MVC, .NET Core, AngularJS, Angular, ReactJS
- **Front-End Development:** Redux, Responsive Design, Bootstrap, JQuery, UI Performance Optimization
- **Back-End Development:** RESTful API Design, WebAPI, Database Migration (AWS Aurora), Asynchronous Messaging (Kafka)
- **Cloud And DevOps:** CI/CD Pipelines (Jenkins, GitLab), CI/CD with Azure, Docker Containerization, Google Cloud Platform (GCP), AWS (Microservices Migration), AWS Lambda (Serverless), Azure Cloud Programming, Infrastructure as Code (Terraform)
- **Database Management:** SQL, Microsoft SQL Server, NoSQL (Amazon DynamoDB), MongoDB
- **Version Control And Agile:** Git, Code Management, Version Management, Agile Development
- **Additional Skills:** API Architecture

Professional Experience

First Citizen Bank

Feb 2024 - Present

Java Full Stack Developer

Raleigh, NC

- Designed and developed applications using agile methodology and adhered to Scrum practices, ensuring clear and consistent communication with process owners and stakeholders.
- Managed pipeline deployments through Azure DevOps, setting up repositories and maintaining robust CI/CD pipelines to keep DevOps updated with user stories and sprint targets.
- Created cross-browser compatible web pages with a focus on responsive design and thorough validation of produced work.
- Utilized React.js and Angular.js to build dynamic, interactive user interfaces that aligned with client requirements and enhanced overall user experience.
- Implemented modules using Core Java APIs, Java Collections, Java 8 (Streams), multi-threading, and object-oriented design to ensure robust functionality.
- Contributed to the development and maintenance of Microservices supporting production applications.
- Utilized IDEs such as Eclipse, NetBeans, and IntelliJ IDEA for Java J2EE application development.
- Worked extensively on existing REST APIs for internal and external service communication.
- Led the migration of Spring Boot versions for all services, enhancing performance through Admin, Eureka, and Config servers.
- Created XML documents for file configuration to streamline application settings.
- Formulated SQL queries using Liquibase and JDBC connectivity for efficient database access.
- Built Lambda functions in AWS to replace Elastic Bean, improving performance and efficiency.
- Developed APIs for AWS to manage servers and execute code from Code Commit.
- Utilized Node.js for building Lambda functions for a web application on AWS LightSail.
- Implemented AWS Cognito for creating user pools and established communication between Lambda functions and Cognito user pools using API Gateway.
- Optimized MongoDB performance through indexing and refined query strategies, ensuring quick data retrieval.
- Enhanced web application security by implementing AWS WAF.
- Employed MongoDB's document-oriented data model to handle and store complex data structures, ensuring scalability.
- Engaged in weekly deployments and provided production support to maintain ongoing operations.
- Implemented comprehensive logging and monitoring within the MongoDB environment, enabling real-time tracking of database activities.

Liberty Mutual Insurance

Jun 2020 - Dec 2022

Java Full Stack Developer

Boston, MA

- Compiled comprehensive System Requirement Specifications (SRS) by gathering client requirements, ensuring clear communication and process owner collaboration.
- Developed project functionalities using Agile Methodology to maintain iterative progress and achieve sprint targets.
- Created single-page applications utilizing Angular 2, Typescript, HTML5, CSS3, and Bootstrap to deliver responsive design and an optimized user experience.
- Developed reusable Typescript components and services based on Angular 2's component-based architecture for efficient REST API consumption.
- Engineered Microservices architecture encompassing Gateway, API Service, Core Service, Discovery Server, and Monitor Server using Spring Cloud Netflix, ensuring design validation and close collaboration with architects.

- Implemented new APIs through RESTful web services using Spring Boot to interface with mobile applications and legacy client systems.
- Applied Hibernate transaction management, batch processing, and cache concepts to enhance application stability.
- Handled messaging services using Apache Kafka, contributing to robust asynchronous communication.
- Engineered a stored-procedure-as-a-service microservice to execute database operations reliably.
- Loaded data into a Cassandra Cluster using the Java API.
- Evaluated MongoDB for scalability and performance, implementing sharding to enhance horizontal scalability.
- Configured AWS infrastructure components such as EC2 instances, security groups, Elastic Load Balancers, AMIs, and Auto Scaling for fault-tolerant systems.
- Designed and developed microservices-based applications using Spring Integration and Spring Boot framework.
- Developed a data pipeline using Flume, Sqoop, Pig, and Java MapReduce for ingesting client behavioural and financial data into HDFS.
- Deployed and administered applications on Cloud infrastructure using Pivotal Cloud Foundry.
- Collaborated with the operations team to set up MongoDB replica sets, ensuring high availability and disaster recovery.
- Exposed web services to client applications by sharing the WSDL.
- Created DDL and DML SQL scripts for object creation in SQL Server databases.
- Developed logical and physical data models based on normalization and RDBMS concepts.
- Designed and implemented database objects including tables, stored procedures, functions, views, indexes, constraints, and triggers, and conducted SQL tuning to improve application response times.
- Utilized Jenkins to manage JAR file deployments, maintained code dependencies using Maven, and implemented a robust CI/CD pipeline.

Target

Jan 2019 - Jun 2020

Java Developer

Minneapolis, MN

- Enhanced user experience and interface design by developing UI screens with JSP, HTML, CSS, and JavaScript.
- Resolved production support issues and contributed to application improvements using JSP, Servlets, and the Struts framework. Additionally, integrated Spring Boot for enhanced performance and maintainability.
- Designed and implemented Action Forms, Action Servlets, and Validating Action Forms within the Struts framework, incorporating Struts Dispatch Action class and form bean classes.
- Ensured robust application functionality through the management of client and server validations using JavaScript and Struts validate plug-in.
- Optimized data object handling between business layers and the front end by leveraging JAVA Collections API.
- Implemented Multithreading to enhance application performance, particularly for handling multiple requests concurrently.
- Developed Stored Procedures and scheduled jobs for generating customer reports, concurrently maintaining SQL scripts, indexes, and complex queries for effective data analysis.
- Established a comprehensive business continuity plan for SQL Server Databases using JDBC drivers. Integrated Spring for Dependency Injection configured XML files for Hibernate mapping to SQL databases and created web services for seamless data exchange. Utilized JDBC to access Oracle databases for customer information. Proficiently employed the ANT build tool for compilation and war file generation.

Education

Texas Tech University

Master's, Computer Science

- **Coursework:** Project Management of Information Technology, Procurement and Contract Management of Information Technology, Systems Analysis Design and Implementation, ITM Security, System and Network
