

Adnan khan

Software Engineer

Fast learner, Great at tech, Motivated to succeed. Experienced software engineer with a passion for developing innovative programs that expedite the efficiency and effectiveness of organizational success. Well-versed in technology and writing code to create systems that are reliable and user-friendly.

WORK EXPERIENCE

Software Engineer-2 ModMed (Modernizing Medicine)

02/2024 - Present

Hyderabad, India

Achievements/Tasks

- Implemented **multithreading and concurrent processing** to handle high-throughput data ingestion, reducing processing time by 70%, achieving a processing rate of 1 million records/hour.
- Refactored **Java/Springboot microservices** using **Builder Design Pattern**, improving code readability by 40% & decreased bug resolution time by 30%.
- Designed microservices following **SOLID principles**, which resulted in a 25% reduction in deployment failures & 15% improvement in code reuse
- Integrated **Splunk** for performance monitoring & **Zipkin** for distributed tracing, reducing average debugging time by 60%.
- Applied **OAuth 2.0 and JWT for secure API authentication**, enhancing security compliance & reducing unauthorized access incidents by 80%

Software Engineer OPTUM (UnitedHealth Group)

07/2020 - 02/2024

Noida, India

Role: Software Engineer - surveillance System Web Application for client. **Product:** surveillance web application. It is used by many client inside Optum which is purely based on Springboot, MongoDB and Angular. **Technology:** Java 1.8, Microservice, Springboot(core, MVC, RestAPI, Swagger API), Apache KAFKA, MongoDB and NoSQL for dataBase used in java STS. **Tools:** SpringTool Suite, Github, Jenkins, Docker, OpenShift and Rally. **Database:** MongoDB(NoSQL).

Responsibility/Tasks

- Engineered and deployed Restful API web services using Java, Spring Boot, and Kafka as a listener, ensuring seamless JSON data transfer, resulting in a 90% reduction in data retrieval time.
- Created new microservice from scratch for ingesting EDI 834 data, which consist of 20million American data.
- Integrated end to end feature enabling processors to attach services at details level. Benefiting business with thousands of dollar saving and enhanced overall processing time for EDI.
- Reduced response time of a RESTAPI from 3 minutes to 3 seconds by implementing multiple design patterns and parallel processing.
- Processed different type of file coming from different team as a file and kafka message stream an putting them in mongoDB, which has processed almost 12million data from customer till now.
- Implemented several API microservices in Java, Springboot & deployed in the Kubernetes environment on the Docker containers.
- Led the whole project which saves 10Million USD every year by generating alert on weekly and daily basis.
- Latency optimization of dashboard 300ms to 60ms by improving grouping of fields in the aggregation pipeline. Participate in the entire application lifecycle, designing systems, focusing on coding & debugging, Collaborate with Front-end developers to integrate user-facing elements with server-side logic.Troubleshooting server-side software & debugging application codes. Monitoring & improving server-side performance.

EDUCATION

Jamia Millia Islamia University B.Tech Computer Science

06/2016 - 07/2020

New Delhi, India

PERSONAL PROJECTS

Backend project (03/2021 - 04/2021)

- I have created a backend platform for todo app in java(**Springboot**).
- Feature:- User login, admin login,deletion, creation, updation, etc
- **JWT authentication**, authorization, **swaggerUI**, pagination, custom query for accessing data from mongo.
- Stack used:- **Microservice(Rest API)**, **SpringBoot**, **MongoDB**.
- <https://mongo-swagger.herokuapp.com/swagger-ui.html>

Generating password and OTP in java (04/2020 - 05/2020)

- I have created a code in java which can be used to generate unique password and OTP for logging on any website. This feature is widely used in many company for generating password and OTP.
- <https://github.com/adnan18hrs/Generating-password-otp-java>

Booking Website for Patient for physical assistant (03/2021 - Present)

- I worked as a full stack developer to create Booking Website for Patient for physical assistant by Used HTML and CSS as frontend and DJANGO as a backend. For the database we used MongoDB
- <https://healthy.herokuapp.com/>

CERTIFICATES

Kafka series (10/2021 - 11/2021)

I have completed a kafka course through Udemy using python, where i learnt to create producer, consumer, broker, partition etc. Works on partition, topic, producer and consumer creation in local system by using python which handles continue flow of message. <https://udemycertificate.s3.amazonaws.com/pdf/UC-17341f36-733d-411a-ad15-94637f0ae35e.pdf>

Python-Django (10/2021 - 11/2021)

I learnt django for backend framework to create Rest API, microservices, app, and also connected my django with mongoDB. <https://udemycertificate.s3.amazonaws.com/pdf/UC-aa37f4c2-33d9-4921-82ab-41acfd2d4505.pdf>

Data structure and algorithm (05/2019 - 07/2019)

Solved 500+ coding problems on multiple platforms like Leetcode, HackerRank and GeeksForGeeks.
